

How to blur photos with Paint simple and fast

To create a blur effect (Blur), we often use professional photo editing software such as Photoshop, SnagIt ... but maybe you do not know the default software on Windows is Microsoft Paint can do it. Blurry photos.

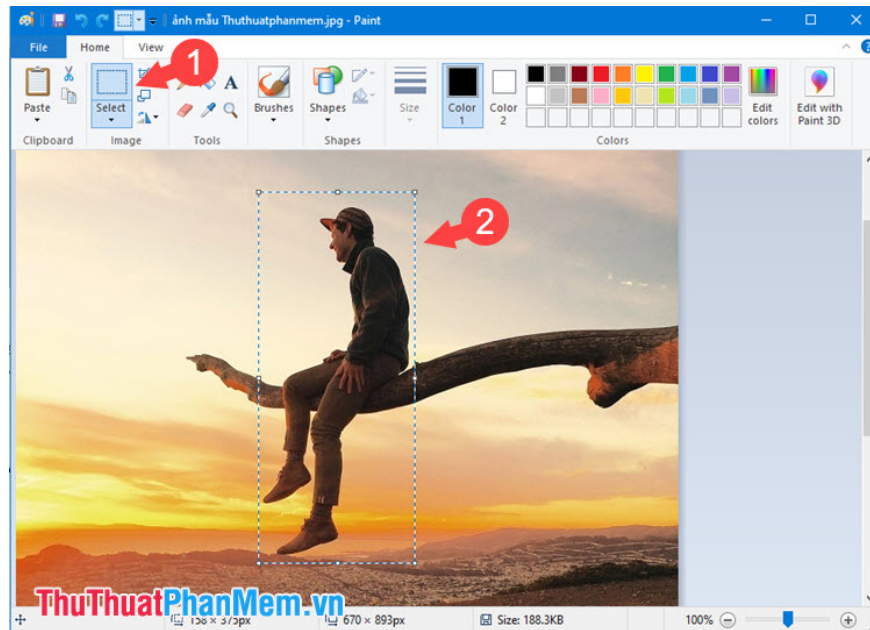

To create a blur effect (Blur), we often use professional photo editing software such as Photoshop, SnagIt . but maybe you do not know the default software on Windows is Microsoft Paint can do it. Blurry photos.

In today's article, TipsMake.com will guide you how to blur photos with Paint quickly and simply, please follow the following instructions.

Method 1: Use the key combination Ctrl and +/-

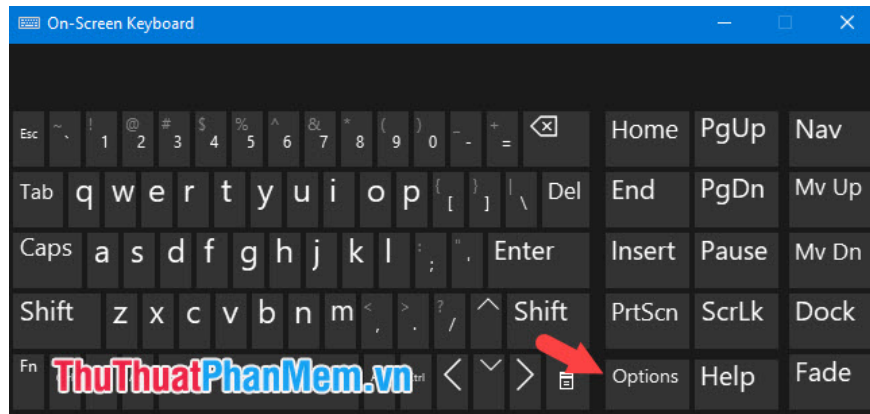

Step 1: You open the image to be blurred with Paint. Then select the **Select** tool (1) and select the image area to be blurred (2) .

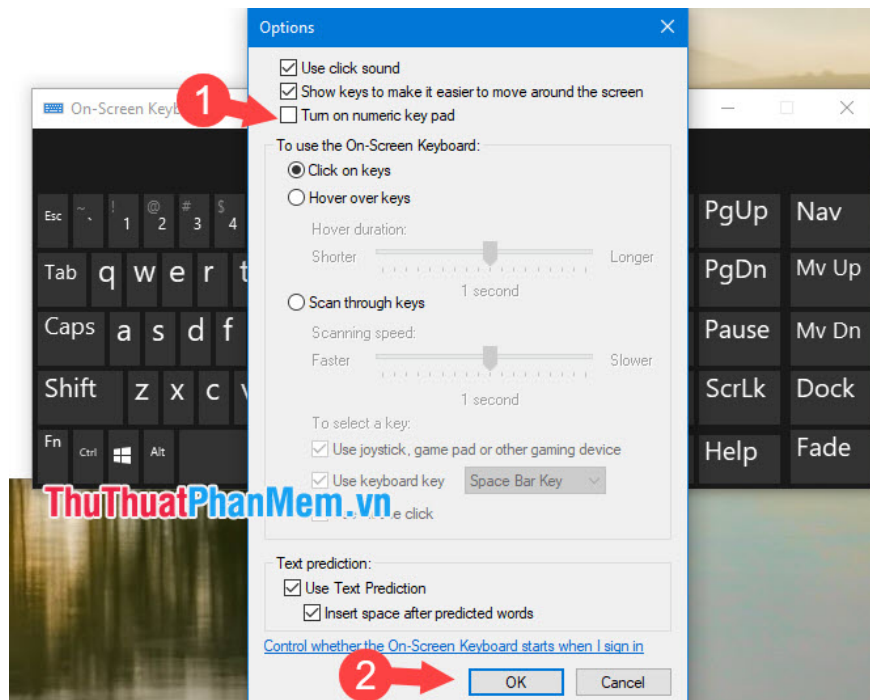

Step 2: You use the key combination **Ctrl** and **+ / -** keys on the keyboard to blur the selected image area.

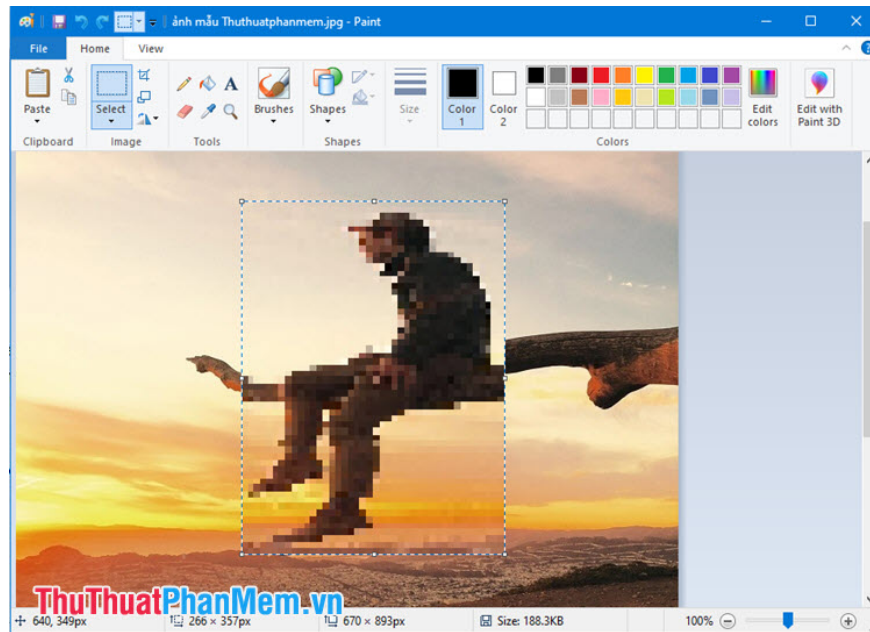

If your laptop doesn't have a **+/-** keyboard, we can open a virtual keyboard (On Screen Keyboard). After opening the virtual keyboard and we do not see the **+/-** number key, click the Options button on the virtual key.

And tick the **Turn on numeric key pad** and click **OK** to save it.

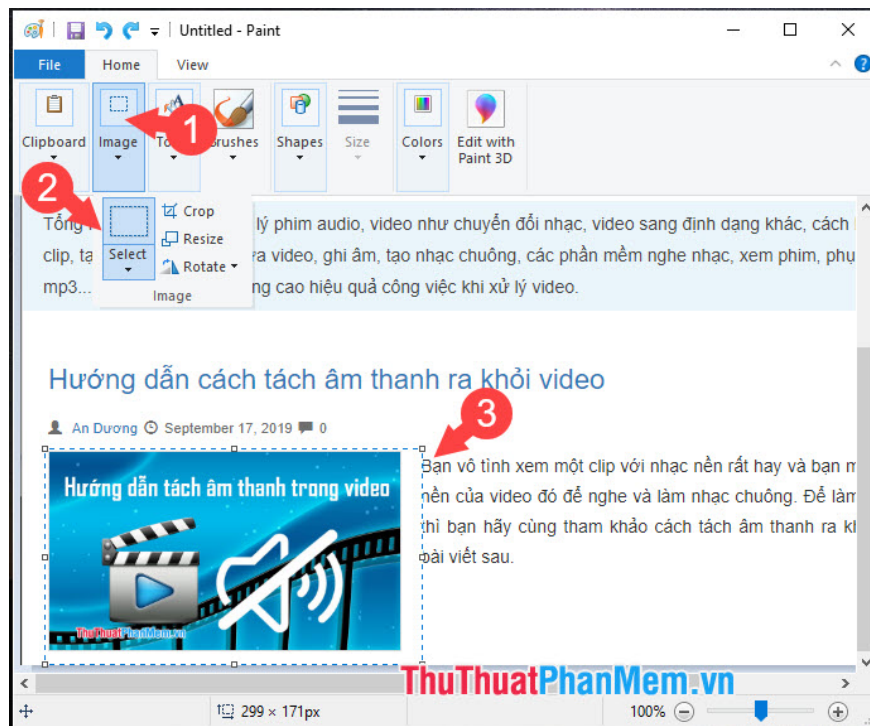

Step 3: After fading, our image area will be displayed as shown below. Click on any point on the image to make the selection disappear.

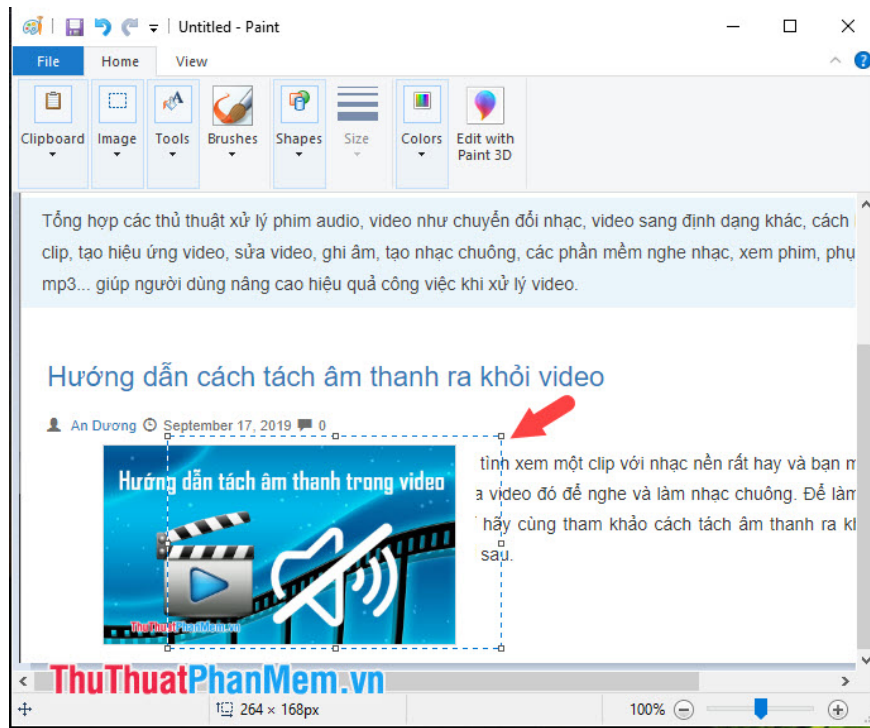

Method 2: Use the mouse and the Select tool.

This way we will blur the image by cutting and stitching the images and then overlapping them to create a new image that is different from the old one.

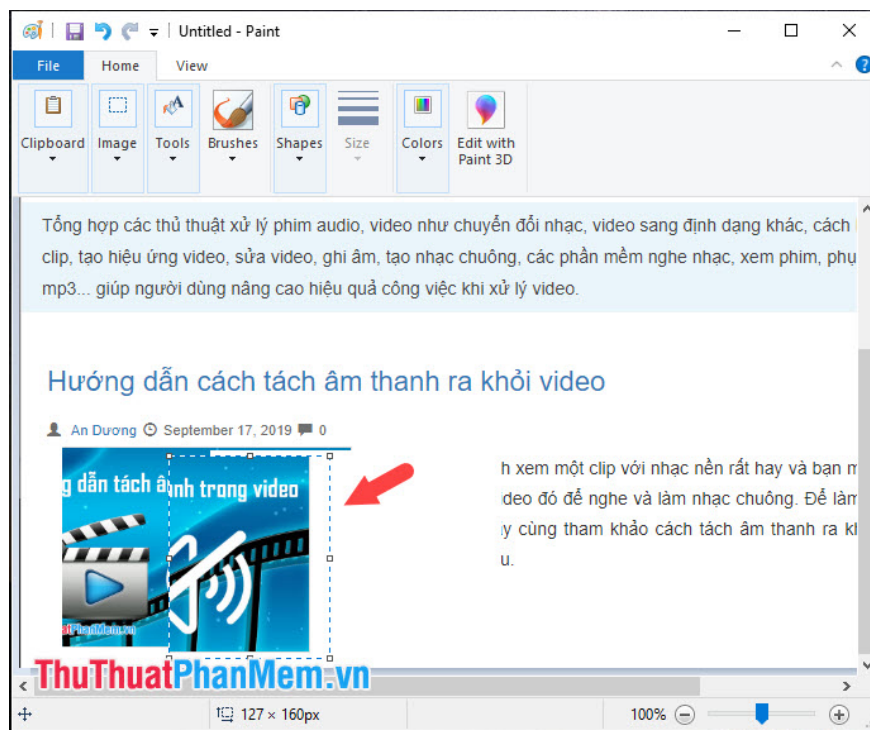

Step 1: Open the image to be blurred and click on the menu **Image (1)** => **Select (2)** . Then you localize the image to be blurred (**3**) .

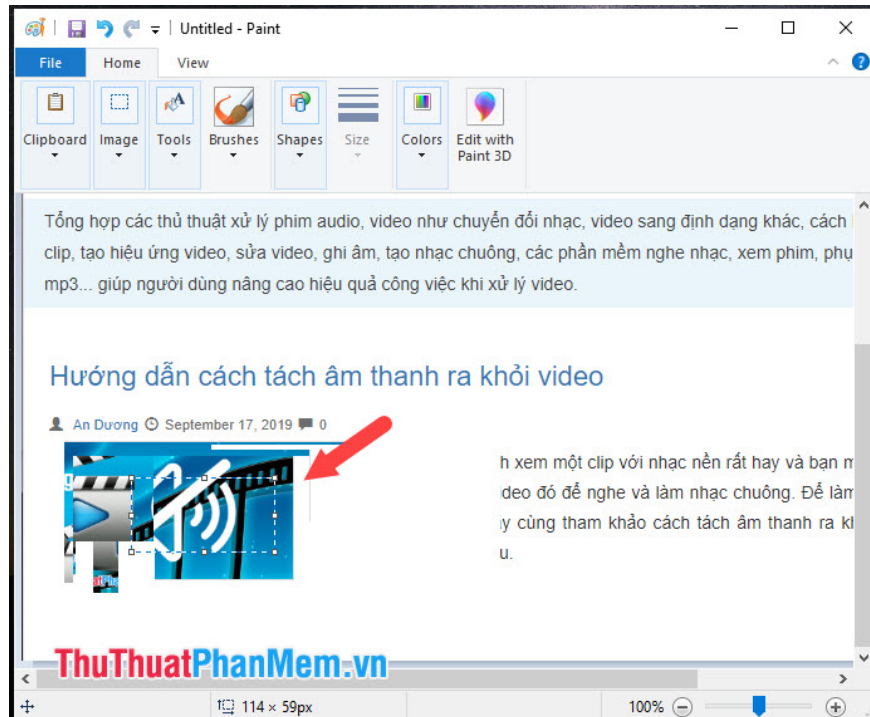

Step 2: You continue to move the image area back and forth as shown below. Then you repeat **Step 1** by going to **Image => Select => Zoning image to be blurred** .

Step 3: You repeat the above two steps and move the image area so that the new image is distorted and the information to be blurred disappears.

As a result, we have a new distorted image that hides the information we need to delete.

With instructions to blur the image with **Microsoft Paint** software , we can quickly handle the areas of the image that we want to blur without any other professional image editing software. Good luck!
