

How to blur video on CapCut

When blurring videos on CapCut, you can blur the entire video or blur a certain area so as not to affect other content.

Here is a guide to blurring videos on CapCut.

How to blur video on CapCut all

Step 1:

Open the video you want to edit on CapCut then **click on Effects** below. Continue to click on **Video Effects** to adjust.

Step 2:

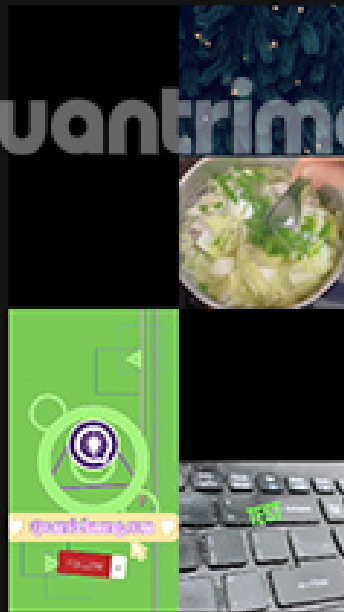

In the video effects interface, find **the Lens group** and select it. Then we will see many effects in this group, scroll down and click on **the Blur effect** to use.

To **adjust the blur level**, click on the adjustment bar icon and increase the blur level to the level you want. If you are satisfied, click the check mark to save.
