

# How to bring Android 8.0 Oreo to old phones

Users can still use Android Oreo version on their old Android device by installing OO Launcher for Android Oreo.

Since Google launched Android Oreo for the Google Pixel smartphone line, other manufacturers have also begun updating Android Oreo for their smartphones. However, older phones don't get these updates and it stops forever with Android Nougat, even with older Android versions. However, users can still use Android Oreo version on their old Android device, by installing **OO Launcher for Android Oreo**.

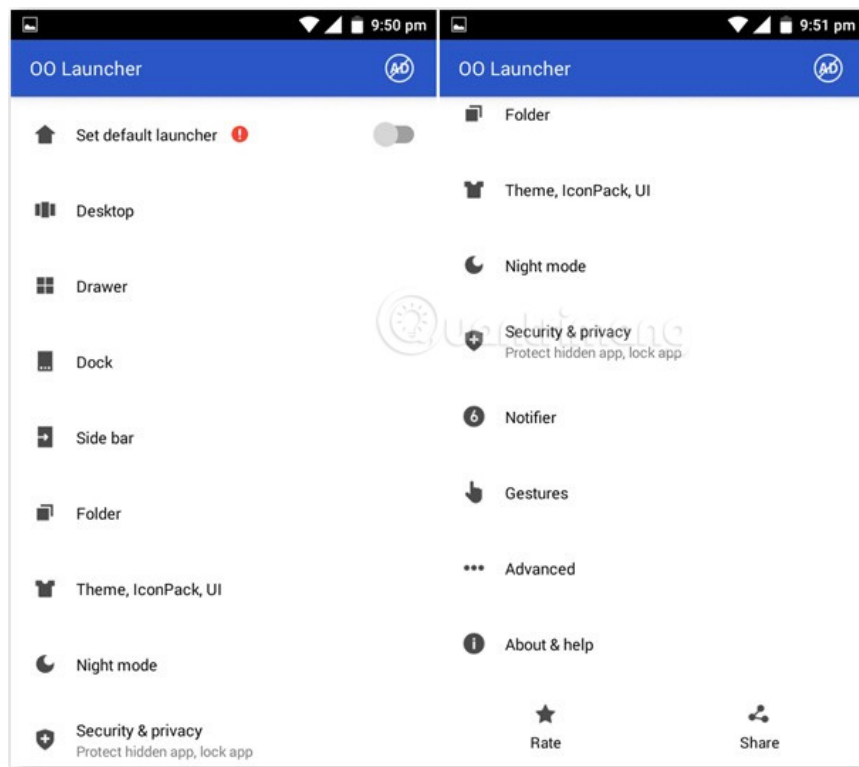

Once the Android launcher is installed, your phone will have a completely new interface of Android Oreo. Even with Android KitKat phones, this app still works perfectly. This Launcher works exactly like the original launcher on Android O. If you swipe the screen up, it will display the control panel (app drawer) that has the same function as Stock Android (pure Android operating system). You can find applications with the search bar, or find applications listed alphabetically and pin them on the home screen.

If you swipe the screen to the right, it will display a toolbar including: flashlight, camera, computer, alarm and eye protection screen. The mechanism of eye protection screen will make the screen color a little pale to help users feel more comfortable reading books and other activities. In this section, users can also see the status of memory, battery, and storage space on the phone.

In the settings, you can make options for the basic parts of the launcher: screen, app drawer, sidebar, folder, etc. You can also change the theme colors, download packages. New phone icons and wallpapers. You can completely change the look and operation of the launcher as you like.
