

How to bring applications to the computer screen on Windows 11

Do you want to bring the application to your computer screen on Windows 11 for convenient operation? Below is the fastest and most accurate way to bring applications to the computer screen on Windows 11.

Are you looking for a way to bring applications to your computer screen on Windows 11 to have more quick access icons? In this article, TipsMake shares with you how to create application icons on the home screen on Win 11.

I. Why is it necessary to bring the application to the Windows computer screen?

For those who often use Windows computers and use multiple applications at the same time. Putting application icons on the home screen helps them open applications faster, make them easier to access and convenient during use. Thus, bringing the application to the main screen of Win 11 is extremely necessary for convenient use.

When installing an application on Windows, by default the system will automatically create an application icon on the home screen. However, while using it, if you accidentally delete the icon or lose the application icon on the home screen, don't worry too much. We can completely bring applications to the computer screen on Win 11 quickly and simply.

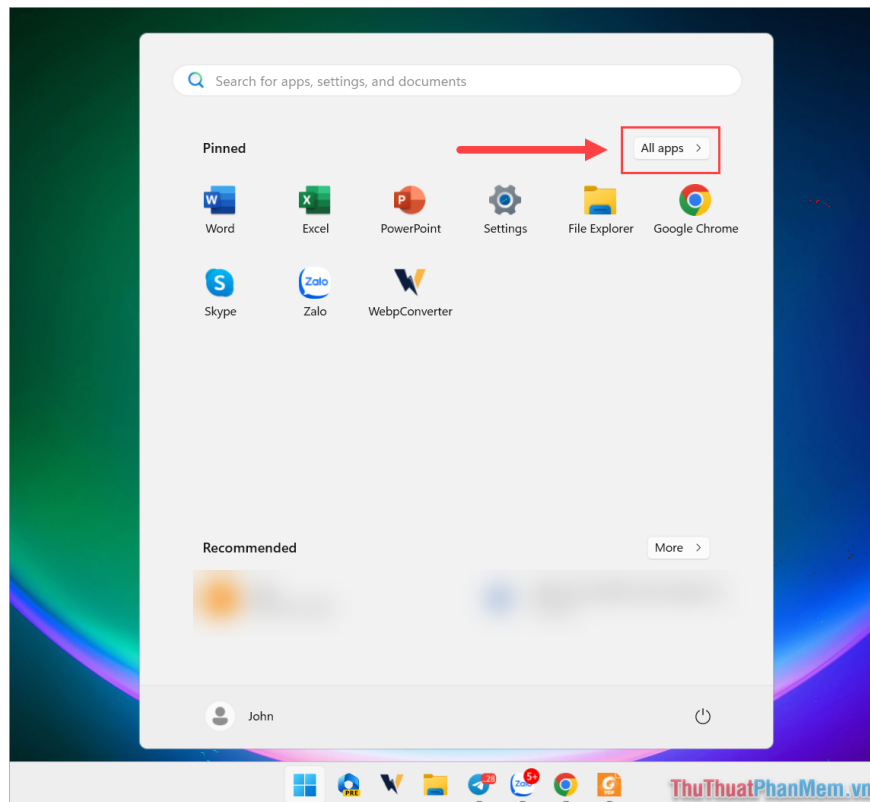

II. How to bring applications to the computer screen on Windows 11

On a Windows 11 computer, you have many different ways to bring applications to different screens. However, we will only need to remember the 4 simplest, most convenient and fastest ways.

1. Bring the application to the computer screen by dragging and dropping

Bringing the application to the computer screen by dragging and dropping is the simplest and fastest way. Anyone can do it and detailed instructions are as follows:

Step 1 : Open **Start** , select **All Apps** to see all applications installed on Win 11.

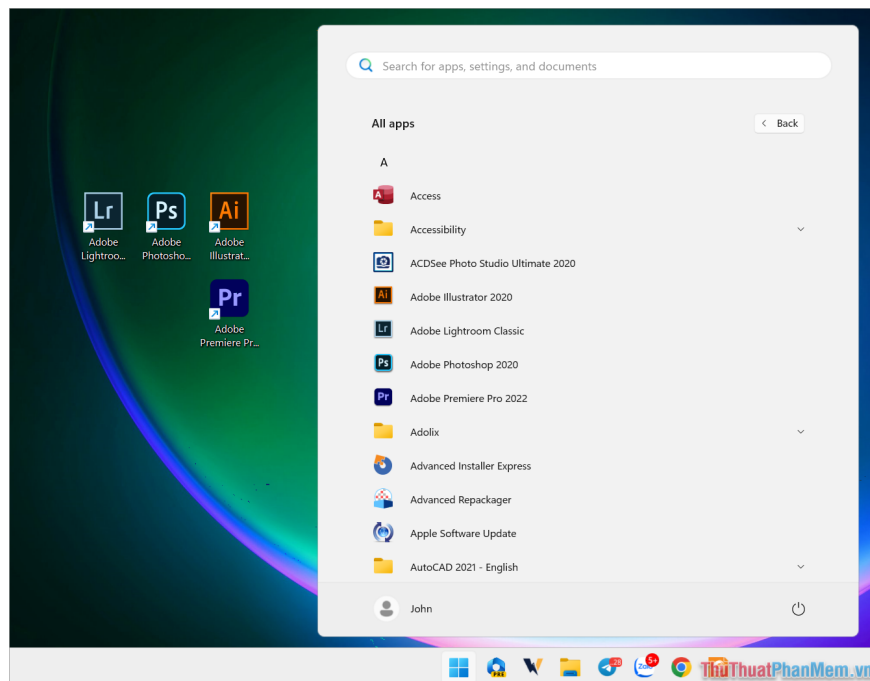

Step 2 : Then, hold the mouse and drag the application to the main screen to bring the application to the screen on your Win 11 computer.

You do the same with other applications in the Start Windows 11 application list.

Step 3 : With just simple steps, you can quickly and simply bring the application icon to the Windows home screen.

Note: Icons created off the computer screen will have an arrow icon in the left corner below the application icon. This means this is the application's Shortcut, deleting this Shortcut item does not affect the software.

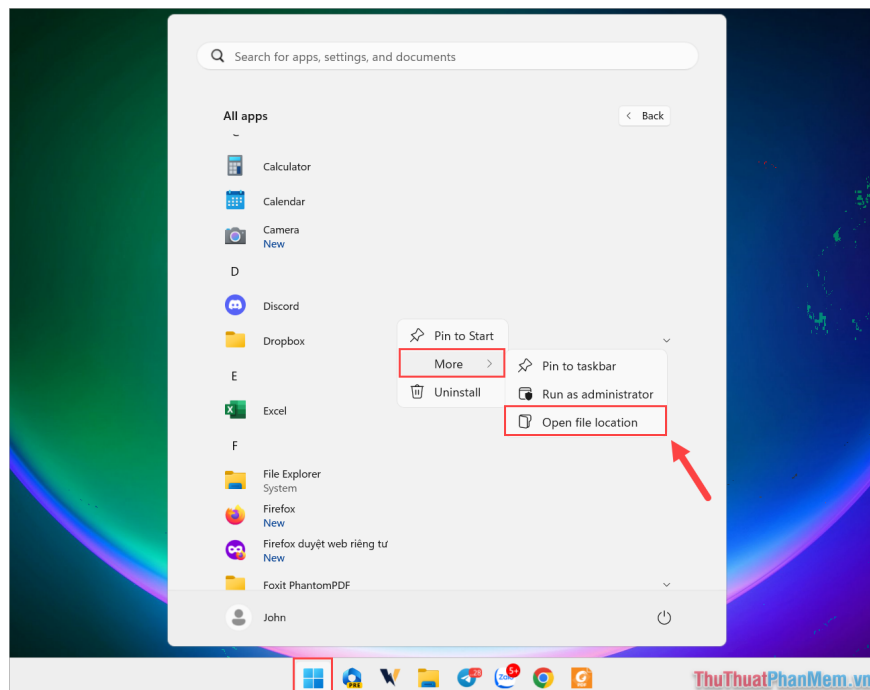

2. How to create application Shortcuts on the Windows 11 screen from Start

In Start, you can bring the application to the home screen for quick use. How to create an off-screen application in Windows 11 is as follows:

Step 1 : Open **Start** , select **All Apps** to see a list of all Win 11 applications.

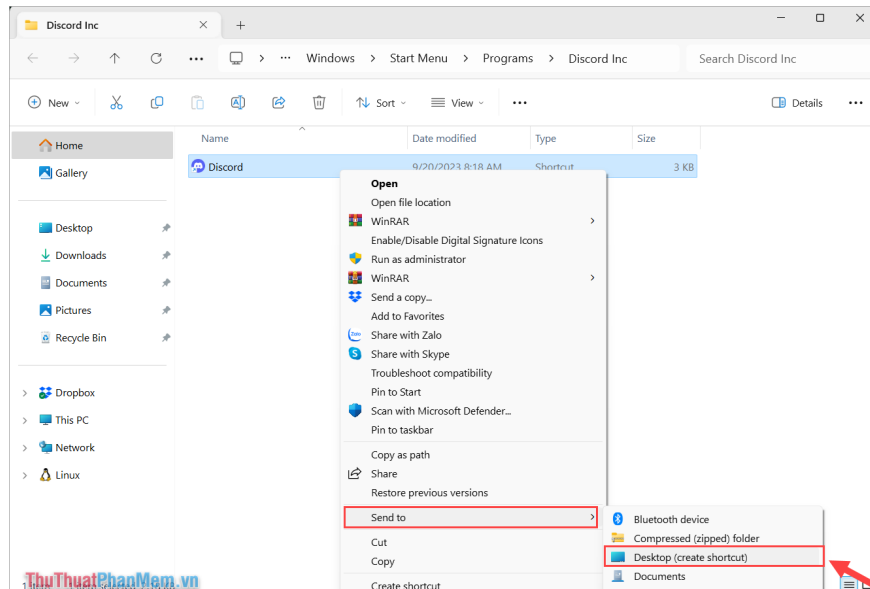

Step 2 : Then, find the application that needs to be displayed on the computer screen. Right-click on the application and select **More ? Open file location** to view the storage folder.

Step 3 : In the application storage folder, **right-click on the application ? Send to ? Desktop (Create shortcut)**

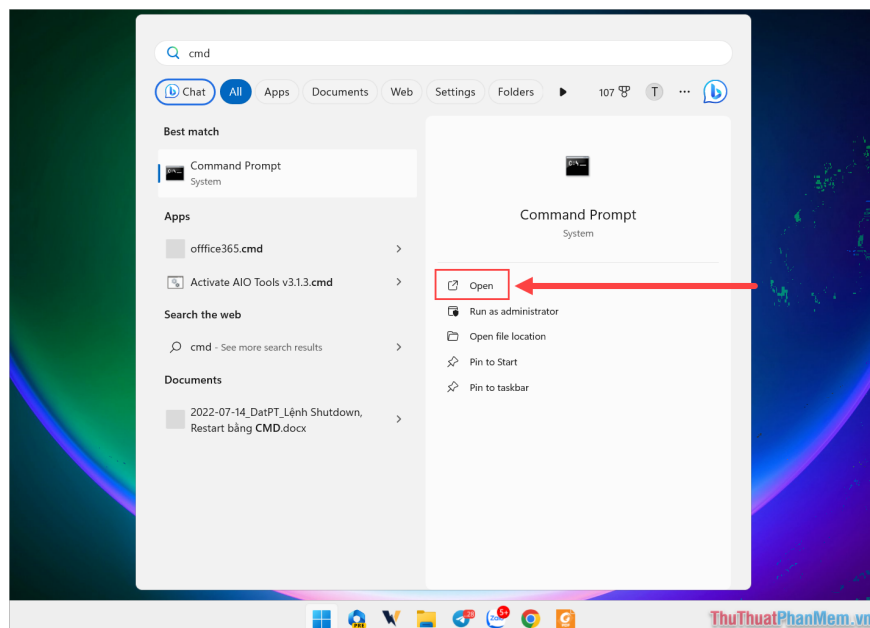

Thus, the system will automatically create an application icon on the Windows 11 computer screen. You just need to do the same with other applications to put the icon on the computer screen.

3. How to bring the application to the computer screen on Windows using CMD

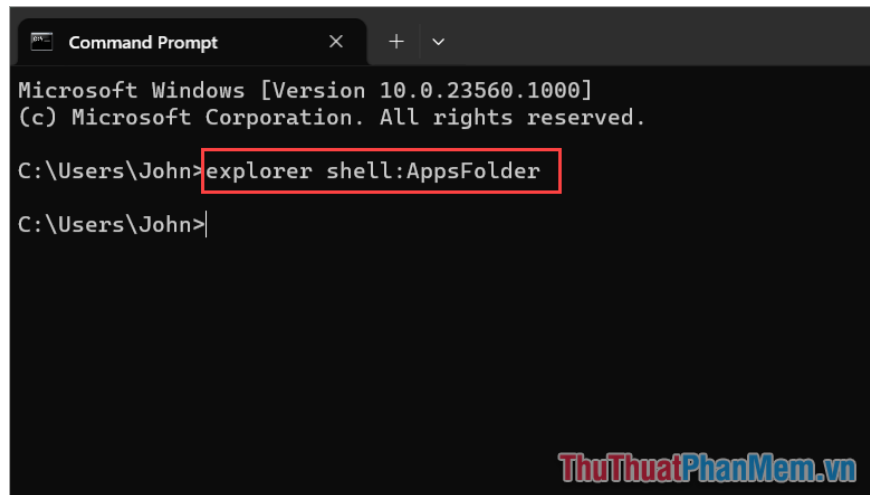

CMD's full name is Command Prompt and is full of features that interfere deeply with the Windows operating system. For those who love and learn deeply about computers, Command Prompt is no stranger. To bring the software to the computer screen on Windows 11, do the following:

Step 1 : Open **Start** , enter **CMD** in the search bar and select **Open** to open Command Prompt.

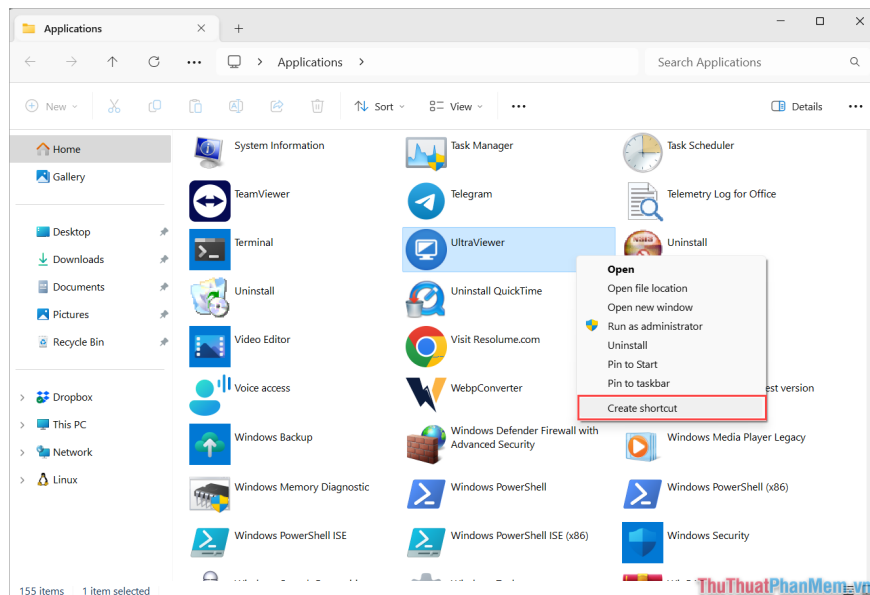

Step 2 : In the Command Prompt window, enter the following data.

explorer shell:AppsFolder

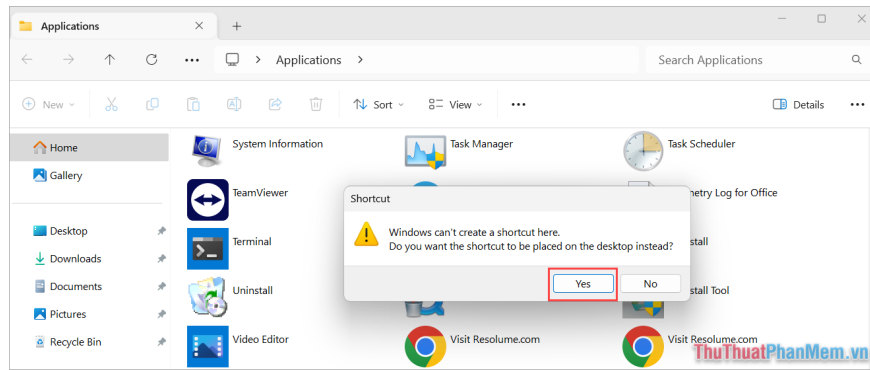

Step 3 : At this point, the system will open the Applications folder on the computer. The Applications folder contains all applications installed on Windows 11.

Find the application you need to display on your computer screen and **right-click ? Create Shortcut** .

Step 4 : At this point, the system will warn *'Windows can't create a shortcut here. Do you want the shortcut to be placed on the desktop instead'*. This message means *'The system cannot create an application icon here. Do you want to create an application icon on your desktop?'*.

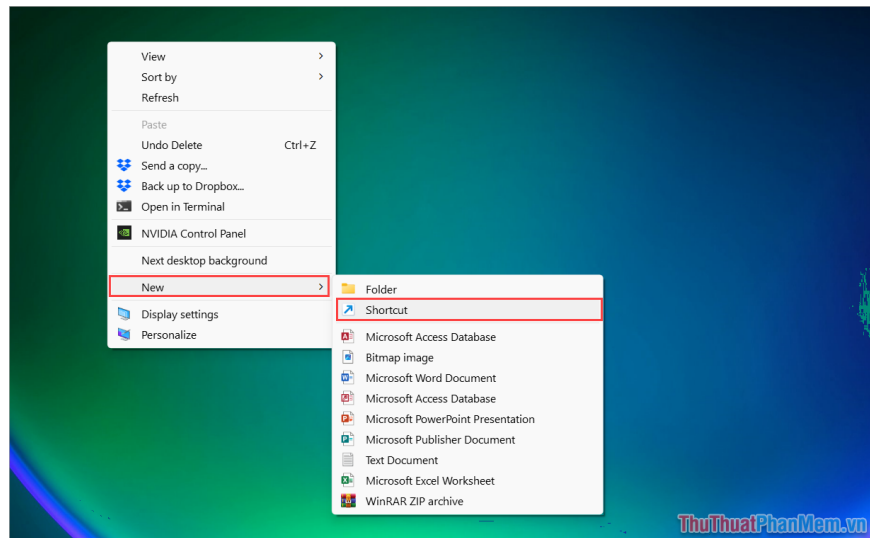

You choose **Yes** to create an icon on the main screen of Win 11.

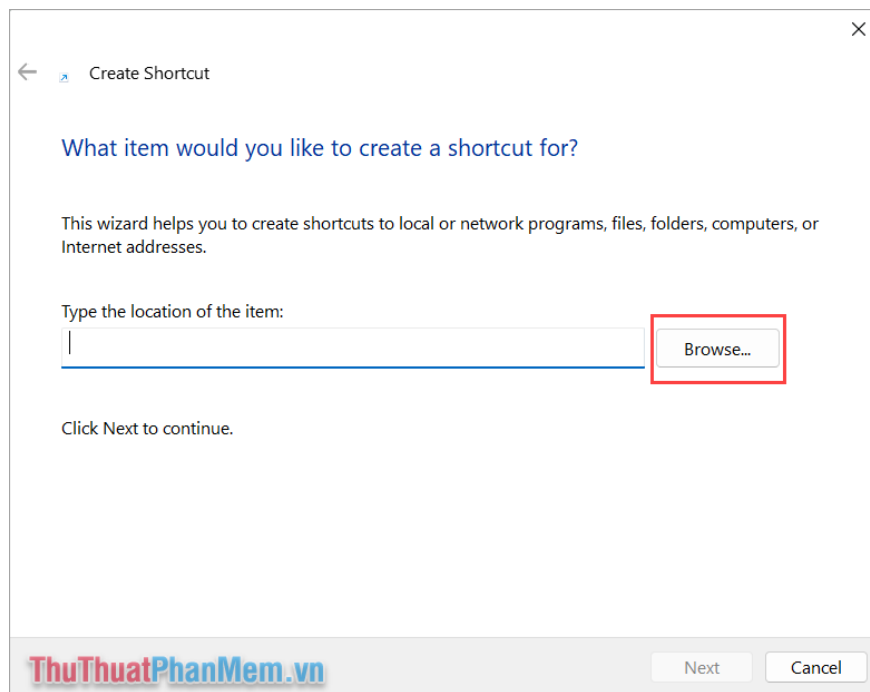

4. Bring the application to the computer screen using the Shortcut command

In addition to simple ways to bring applications to the computer screen, you can also find advanced ways to create icons on the computer screen. How to create an application icon on the computer using the Shortcut command as follows:

Step 1 : Right-click on the Desktop screen, select **New ? Shortcut .**

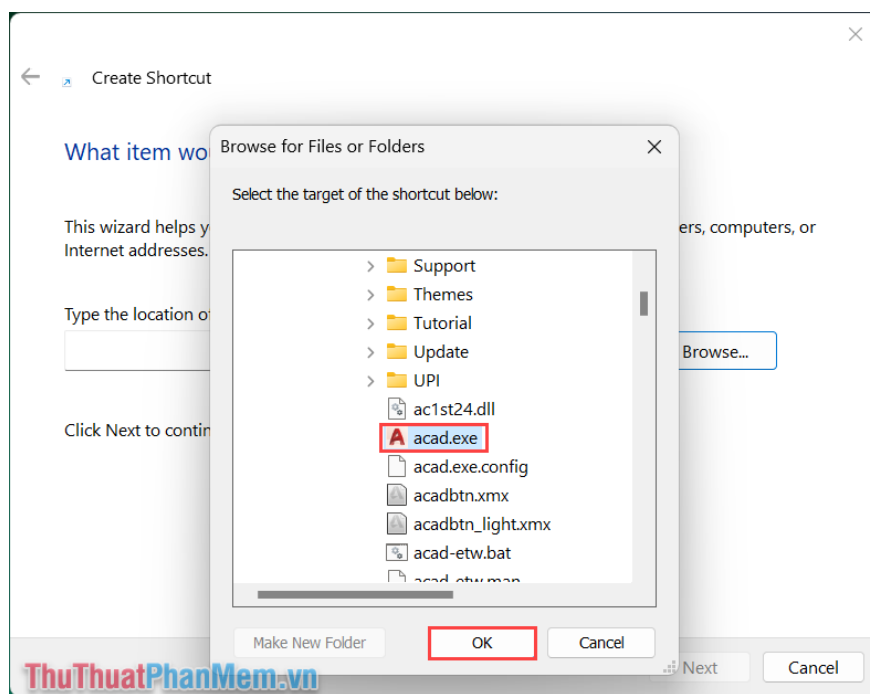

Step 2 : Then, select **Browse .** to open the folder and search for applications that need to be displayed on the computer screen.

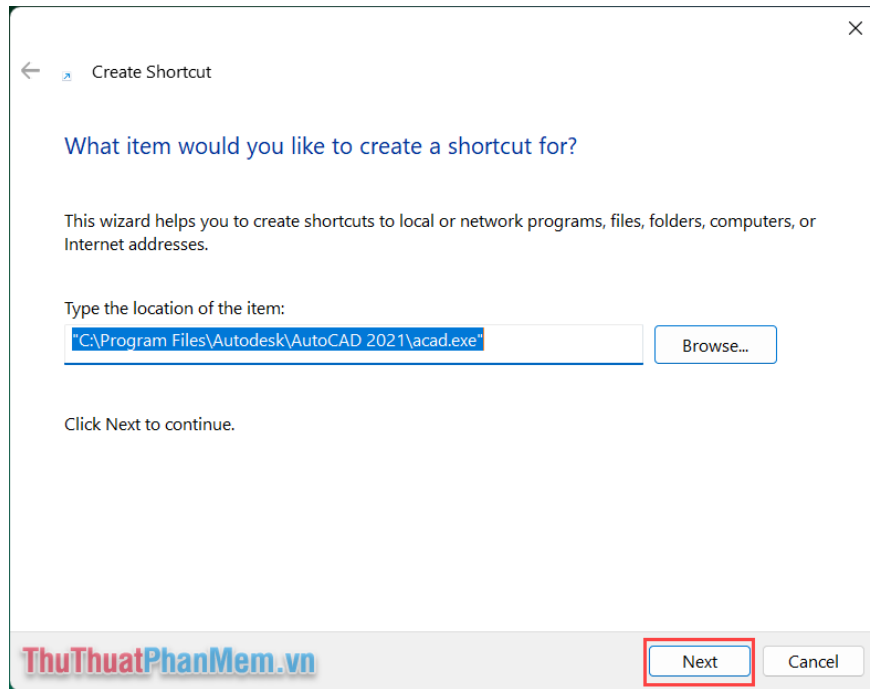

Step 3 : Normally, applications on Win 11 computers will be located in the following folder.

C:Program Files

In addition to the above folder, you can also search in other folders to find the application icon you are looking for.

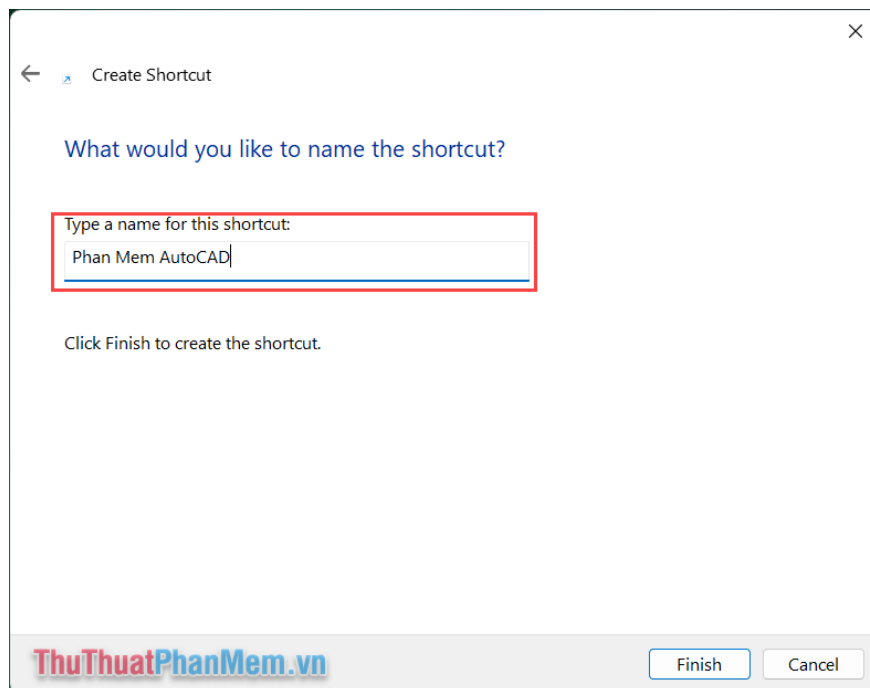

Step 4 : Next, select **Next** to continue creating the icon on your computer.

Step 5 : In the Create Shortcut window, you can name the application icon when creating it on the computer screen. Once completed, click **Finish** to finish creating the icon on your computer.

Note: To avoid conflicts, you should use unsigned names.

Step 6 : So, you have finished bringing the application to the computer screen on Windows 11.
