

How to bring iPhone StandBy to Android

If you want to use Standby mode on Android, you can install the Standby Mode Pro application. Below are instructions for installing Standby mode on Android.

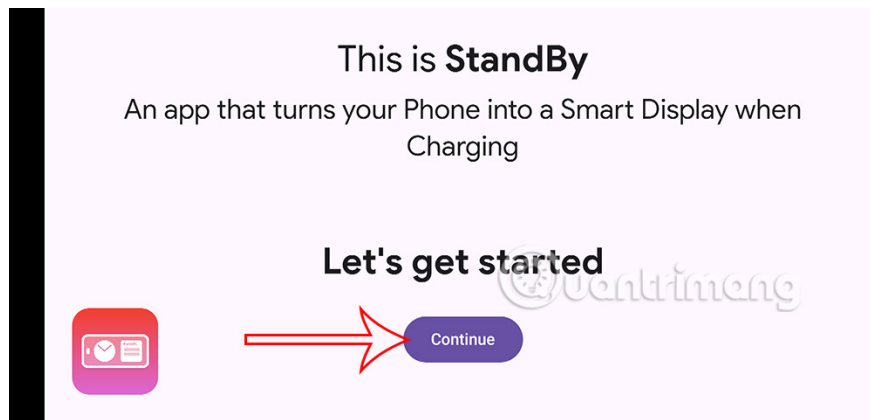

Standby mode on iPhone is a very useful feature, turning the iPhone into a screen displaying useful information while we charge the phone battery. If you want to use Standby mode on Android, you can install the Standby Mode Pro application. Below are instructions for installing Standby mode on Android.

Instructions for setting StandBy mode on Android

Step 1:

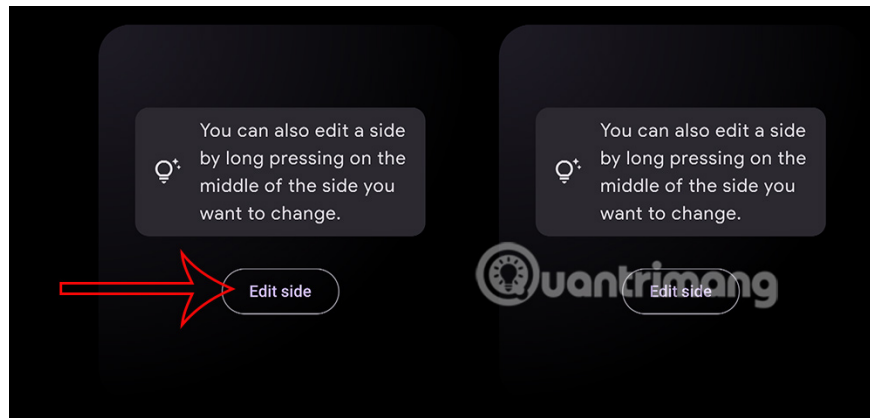

First, download the StandBy Mode Pro application for Android from the link below.

In the application interface, **click Continue** to use.

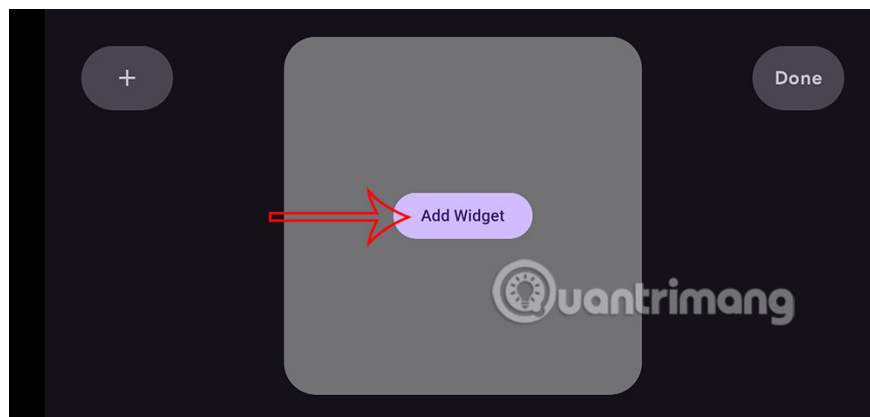

Step 2:

Next we adjust the widgets that will appear when you charge your device. Click **the Edit** side button to adjust.

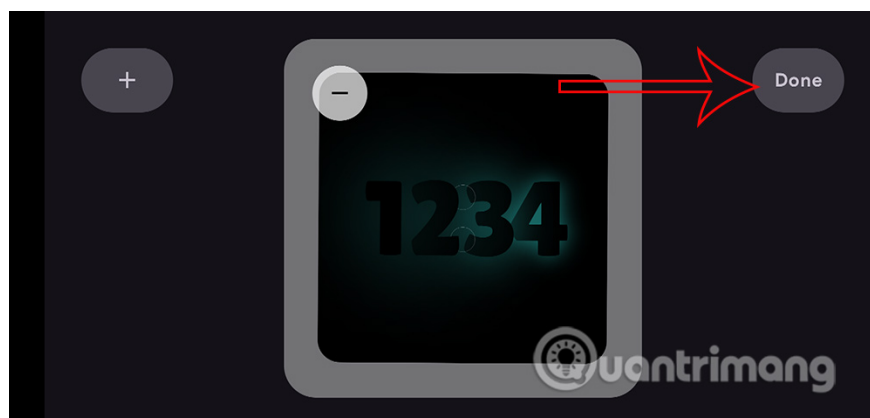

Show new interface, **click Add widget** to add widget.

Step 3:

Then the user will see the **clock widget** option to add to the screen. You choose the type of clock you want to add to the Android screen when charging. Then **press Done** to add the widget to the Android screen when charging.

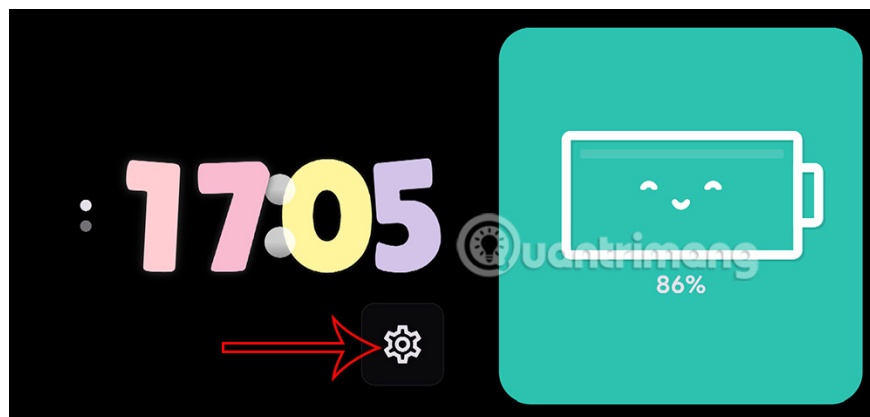

You continue to add more content to your Android phone screen.

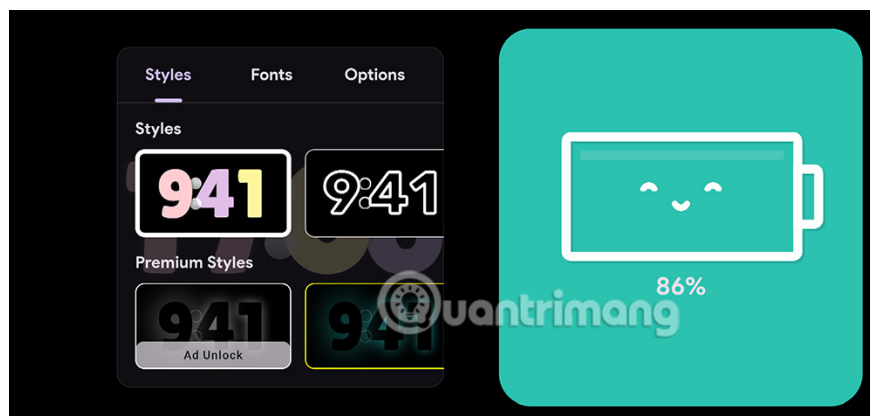

Step 4:

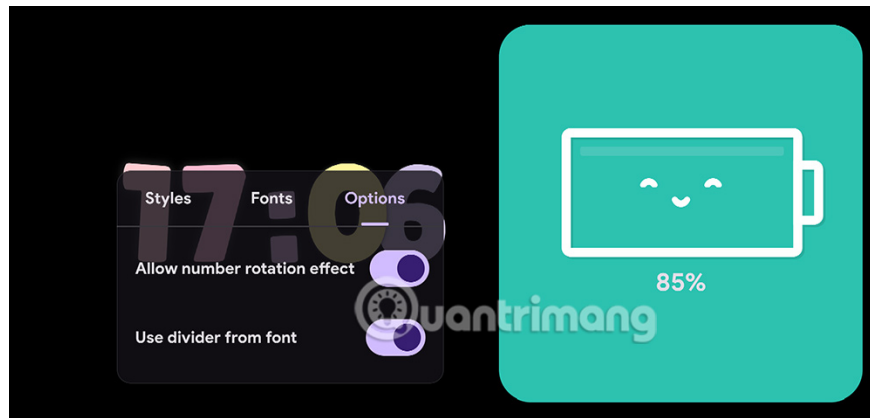

In the interface as shown, we click on **the gear icon** to adjust the utility.

Now you will see the option to edit the display content with items as shown.

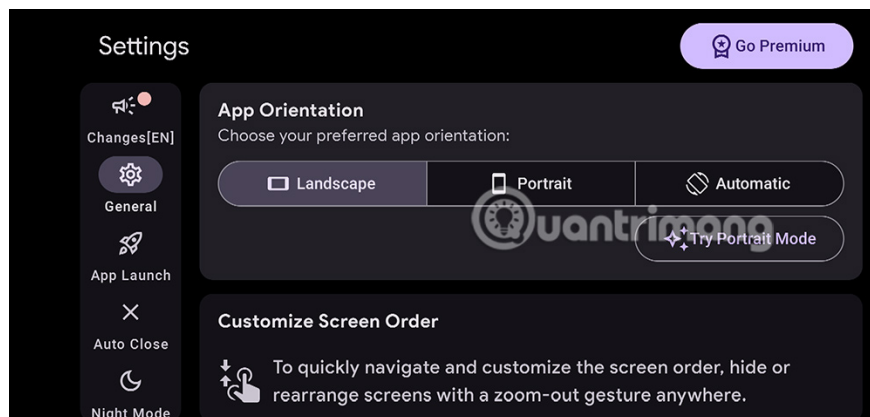

You click on the new display style to change it as you like.

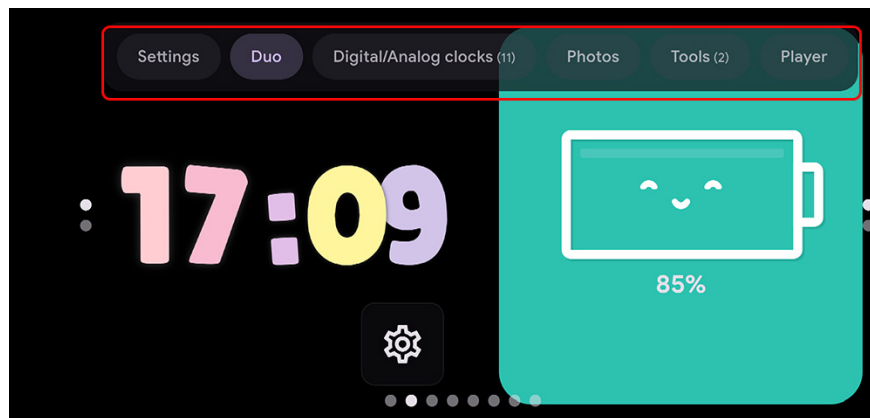

Step 5:

In addition, when you **swipe the screen to the right**, you will be transferred to the application's **Settings interface** with group items as shown to adjust the application. Here, users click on each item to change the settings.

To return to the widget adjustment screen, simply swipe the screen to the left. You can then add other widgets to display on your Android screen while charging.
