Steps to change the icon on the Status Bar on Android

Step 1. First of all, you need to root the Android device

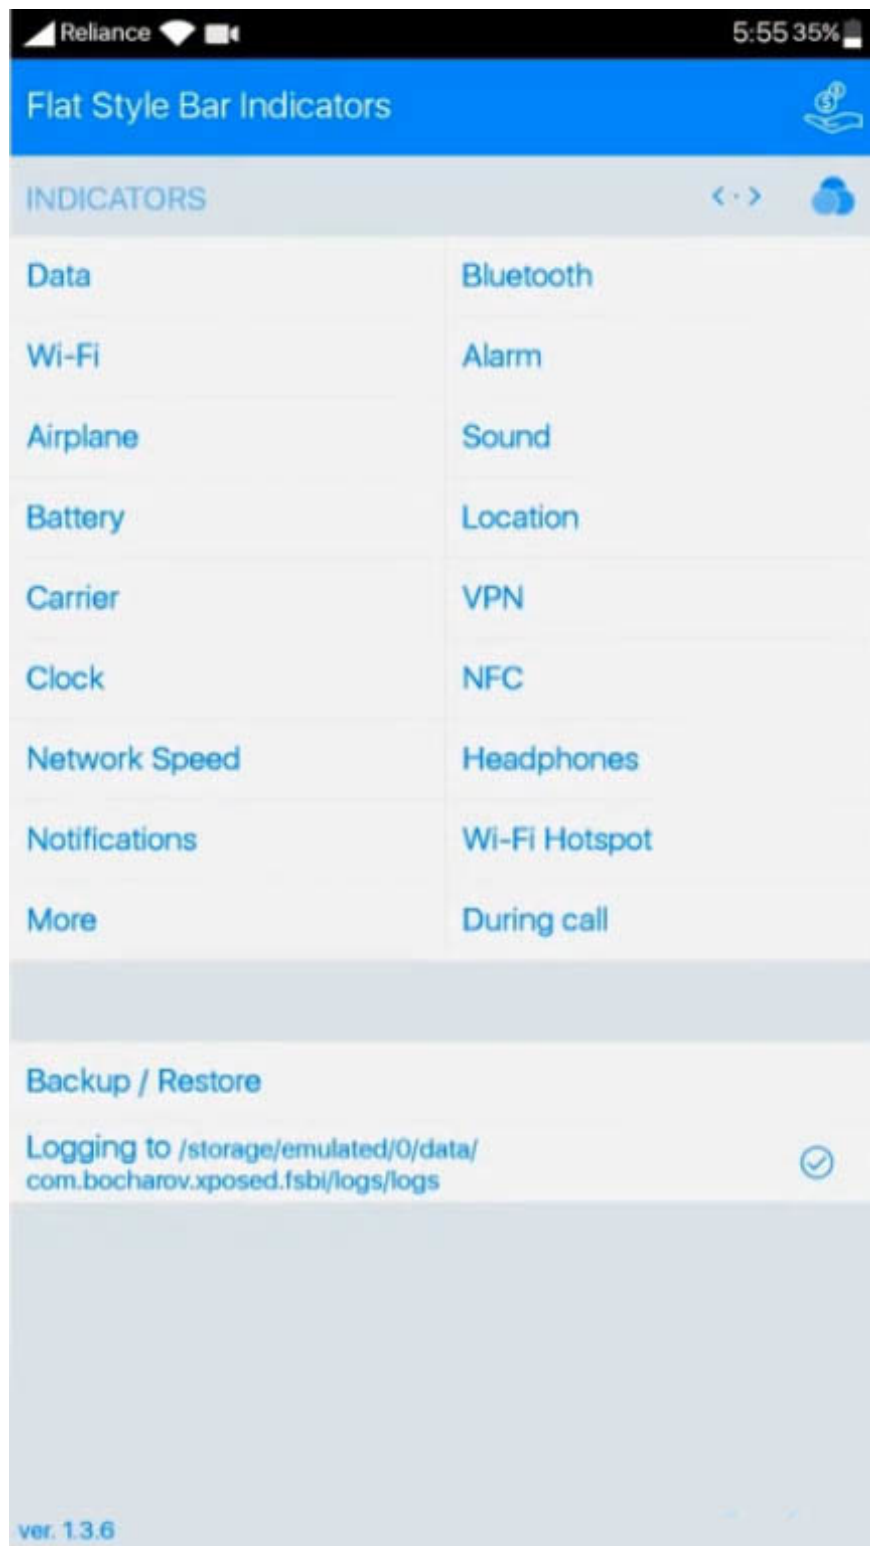

Step 2. Install Xposed Framework for Android

Step 3. Install the Flat Style Bar Indicators Module.

Step 4. Turn on the module in Xposed.

Step 5. After activating the module, you will see the icon options for the status bar. You can adjust them as you like.

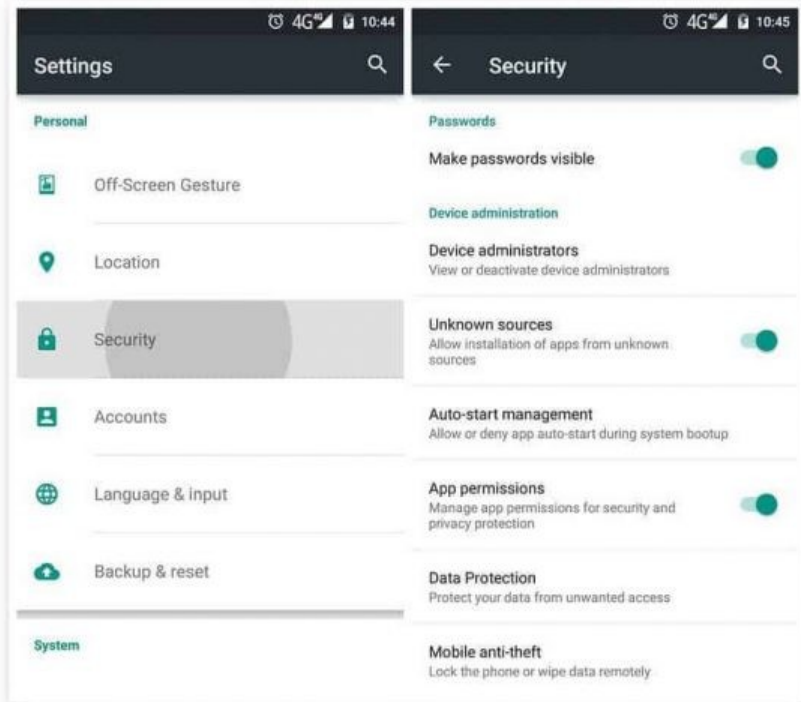

Alternative modules to customize Android status bar

iOS 8 Killer

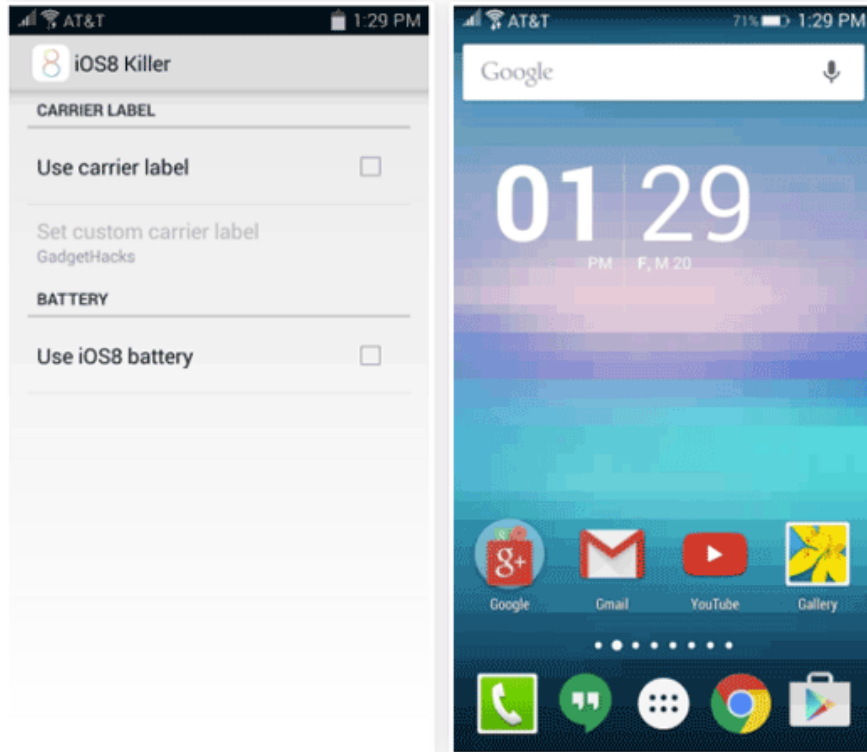

Link download iOS 8 Killer:

<https://my.pcloud.com/publink/show?code=XZjpkZ00zebq83KdpoVcFBqwSdwmkbt9sy>

Download and install iOS 8 Killer. The application is not available on Google Play Store. Therefore, you must turn on Unknown Sources before installing the application.

After installation, activate the module via Xposed installer.

Customize the status bar icons to simulate iOS at will.

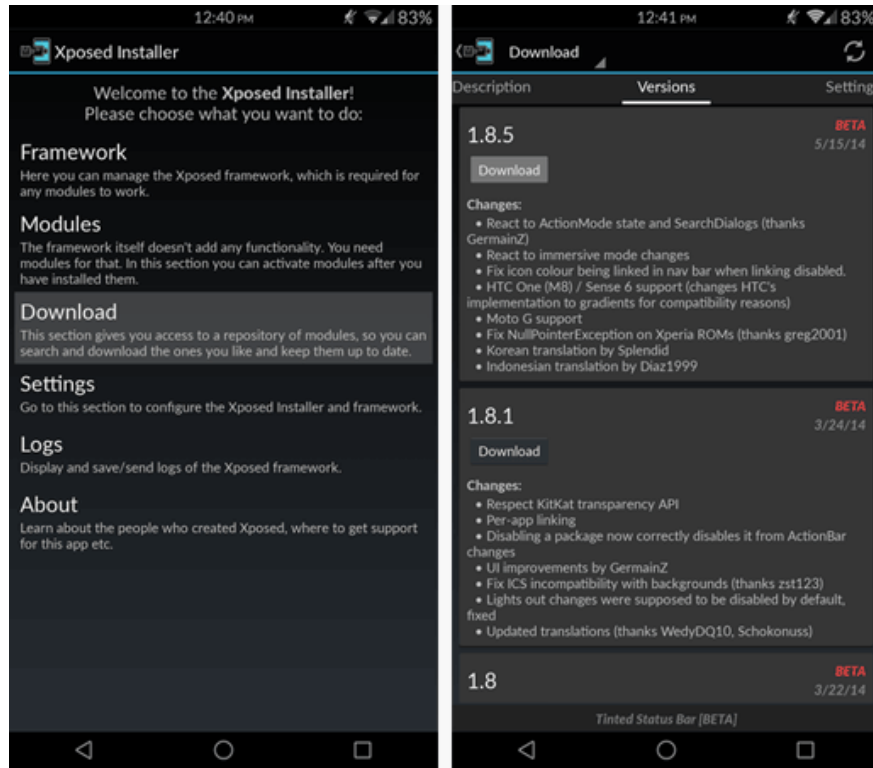

Tinted Status Bar

Link to download Tinted Status Bar:

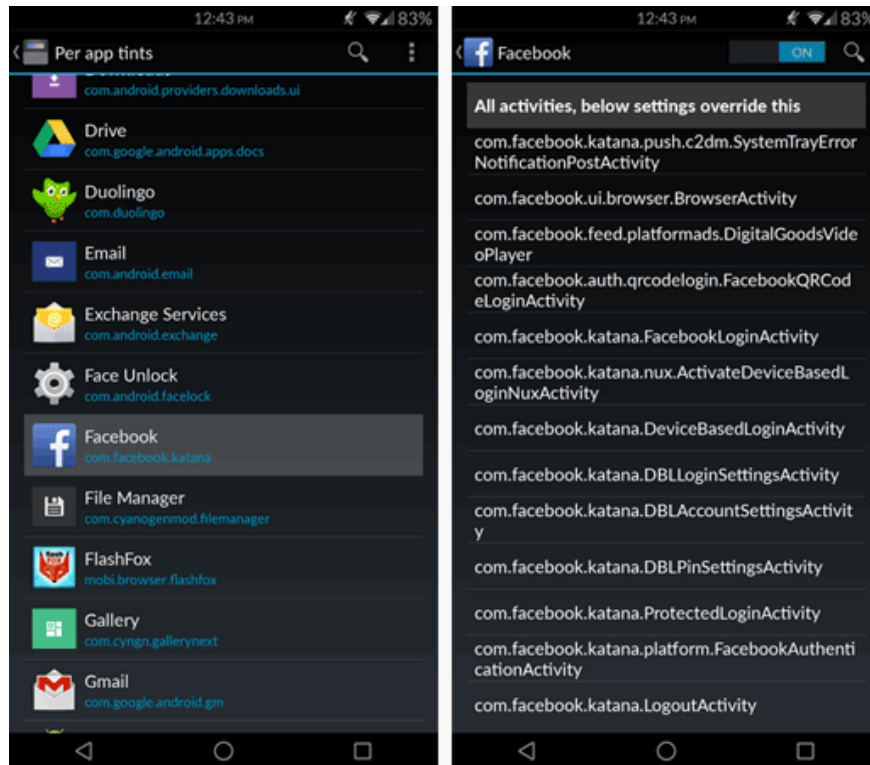

<http://repo.xposed.info/module/com.mohammadag.colouredstatusbar>

From iOS 7, the status bar will be the same color as the application. If you want to bring this feature to Android, and with the older Android version, you need to use the Tinted Status Bar application

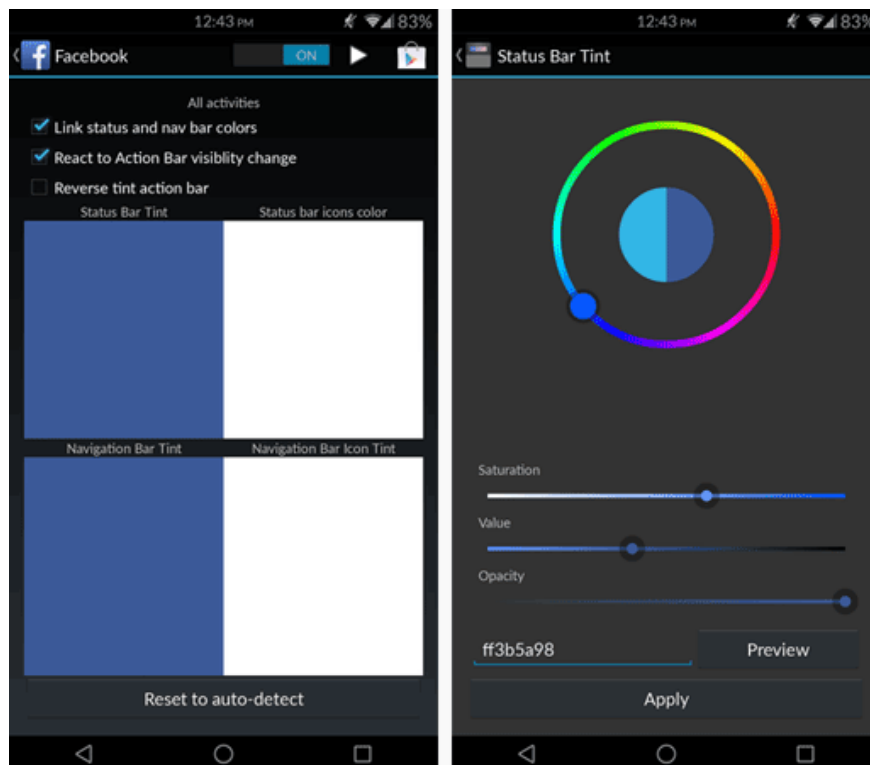

Open the Xposed installer and then find the Tinted Status Bar module. Download and install the latest version of the application.

After installation, activate the Tinted Status Bar. Then restart the Android device. Open the Tinted Status Bar application and you will see all the applications installed on your device. Open the application and turn on the switch at the top.

Enable options **Link Status and NavBar colors** and **React to Action bar visibility change** .

Now open the app and you will see a colorful status bar like iOS on any Android device.

Having fun!
