

How to bring Spotlight Search macOS to Windows 10

Spotlight Search feature can bring up Windows 10 with a simple implementation.

On macOS, there is a Spotlight Search feature similar to Windows Search, but the interface is much simpler. If you open the Search bar on Windows, you will see a lot of content such as frequently accessed applications, file history, . Spotlight Search, which has a simpler interface, only displays results that match with keywords. you enter only. If you like the simple way of searching for Spotlight Search macOS, you can bring it to your Windows 10 computer with a simple implementation.

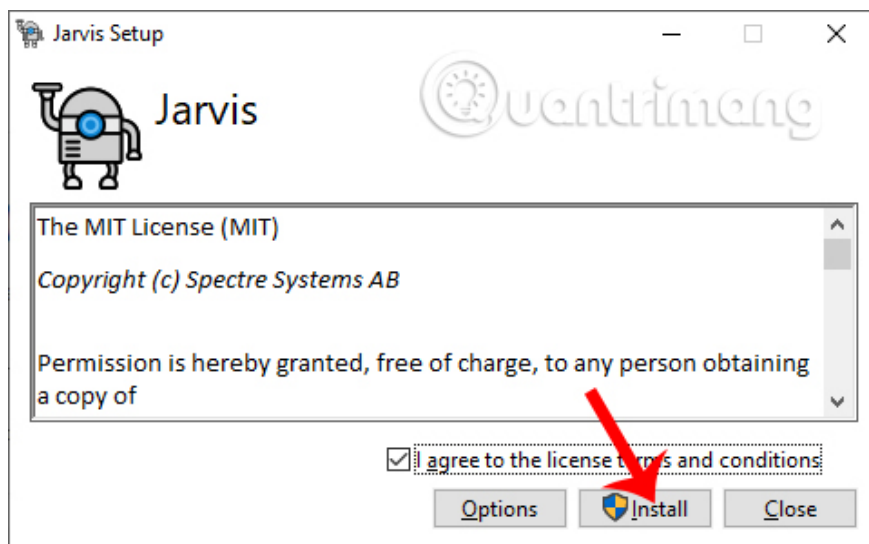

Instructions to bring Spotlight Search to Windows 10

Step 1:

We download the Jarvis tool following the link below and proceed to boot to use.

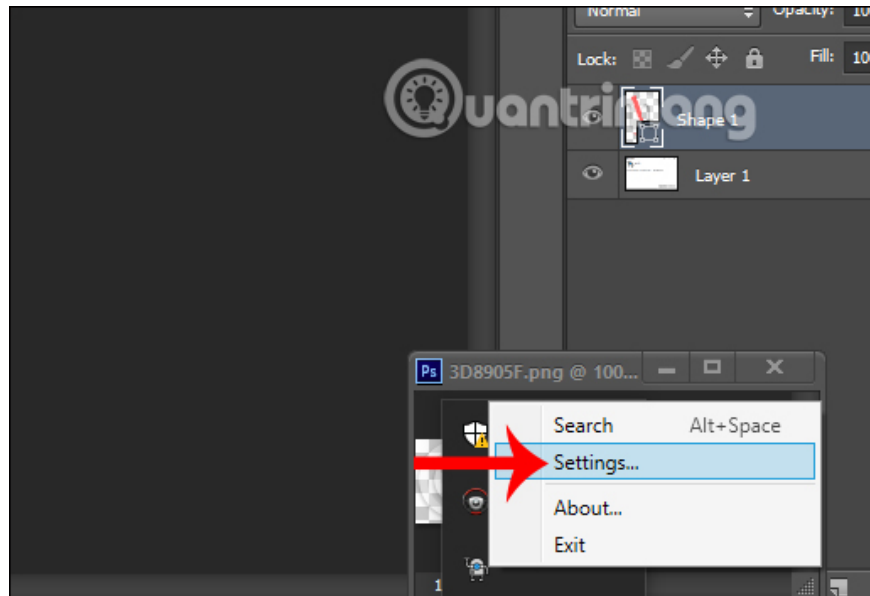

<https://github.com/spectresystems/jarvis/releases>

In this interface, **click Install** to use and wait for the installation process to complete.

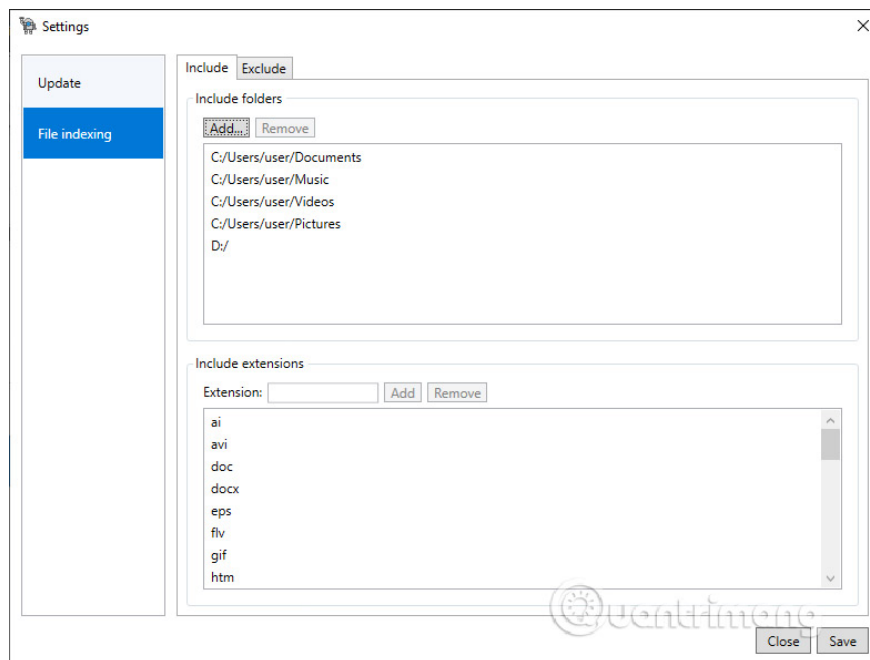

Step 2:

Once installed, click on **the Jarvis icon in the system tray** and select **Settings** in the interface displayed.

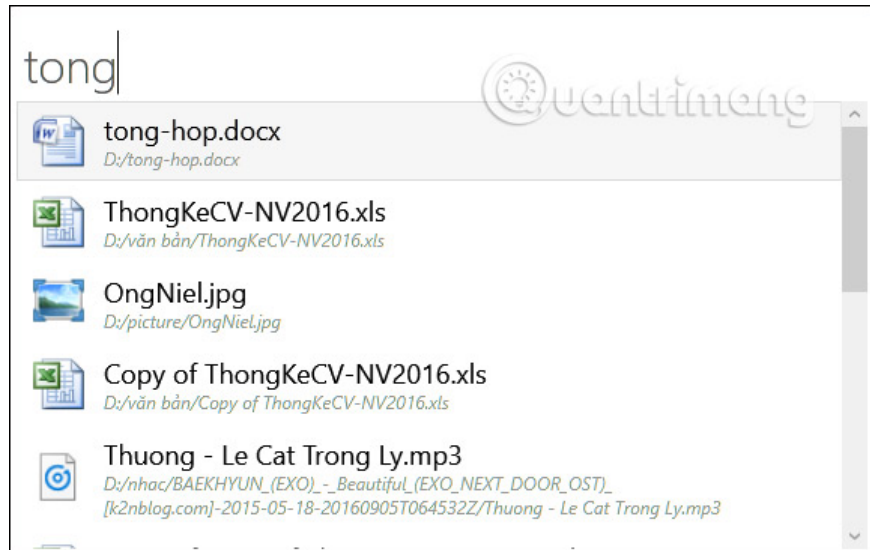

In the tool settings interface, click **File Indexing** to adjust the folder or files that you want to appear when searching on your computer.

If **Jarvis** wants to **find files in any folder** , click the **Include tab** and then **click Add** to add the folder. In contrast, the Exclude tab with folders, file formats that you do not want to appear in search results. Click Save to save when there are changes.

Step 3:

Finally, to **open the Spotlight Search bar** , users use the **key combination Alt + Space** . Now display the search bar for you to enter keywords. When you enter a keyword, the results shown below will be just files whose names match the keywords you entered. The search interface is also very simple, not much else like Windows Search.
