

How to Build a Page Using JSN Pagebuilder

One of the main obstacles in building a Joomla website, is getting through long lines of code. Luckily, JSN PageBuilder can help. All you have to do is select and customize from various types of elements pre-provided by the extensions. JSN...

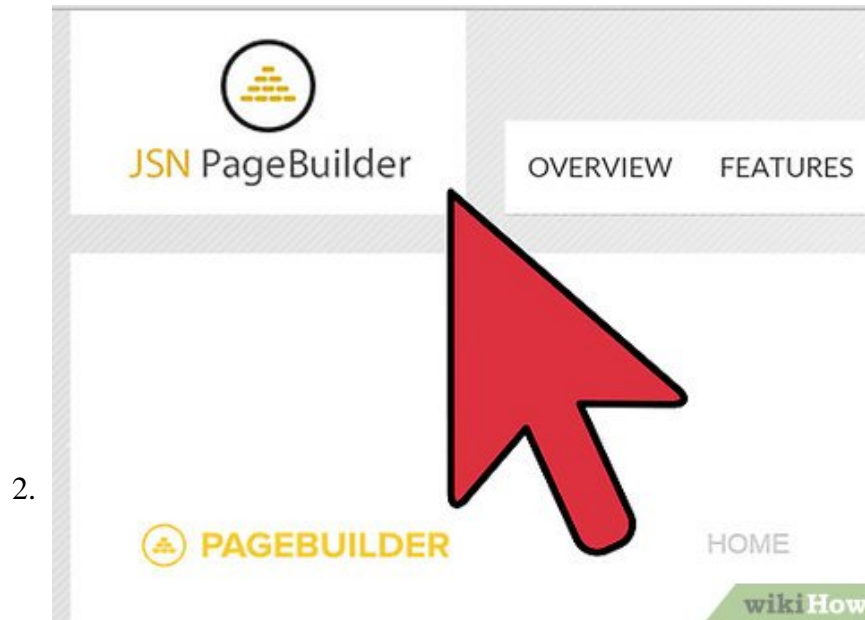

Method 1 of 2:

Initial Setup

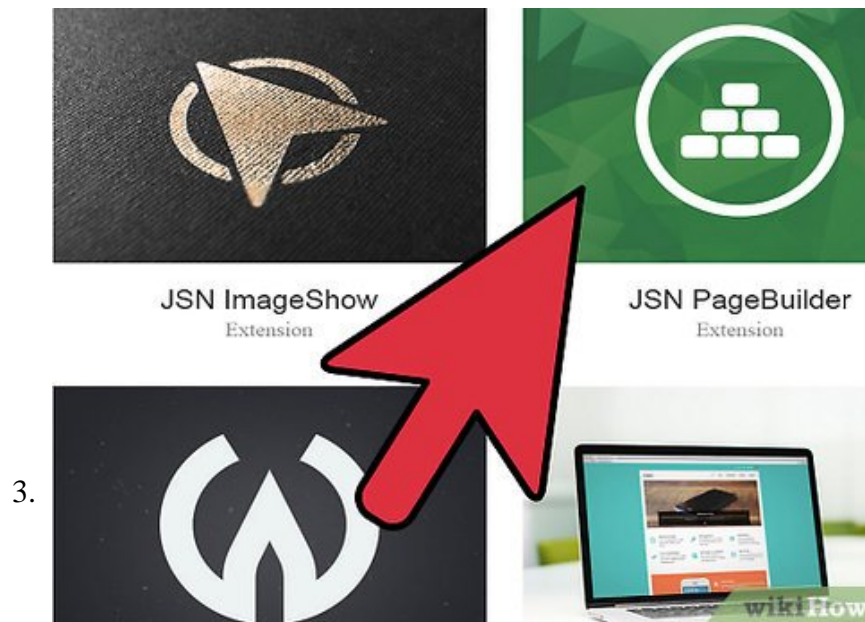

1.

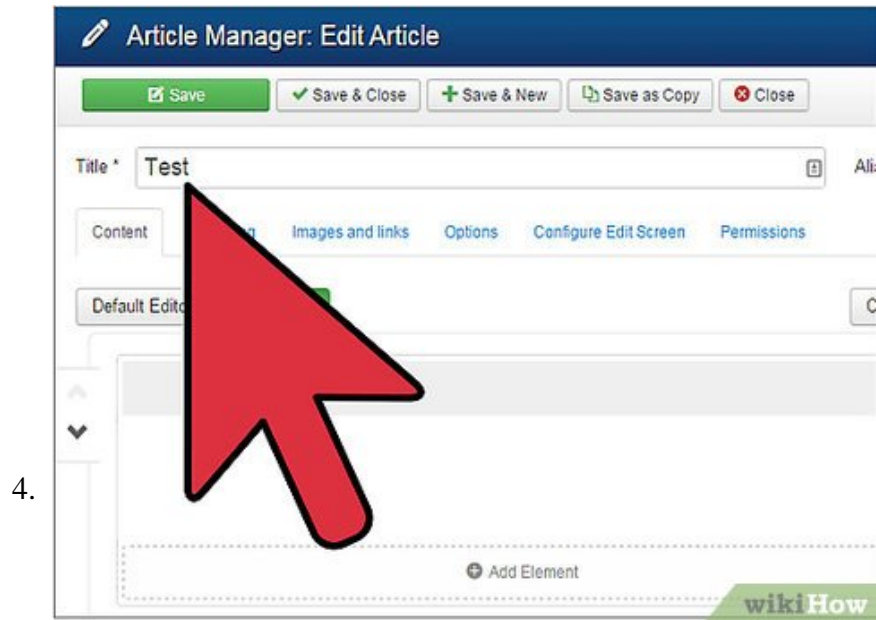

Download JSN PageBuilder (beta) FREE. Visit <http://www.joomlashine.com/joomla-extensions/jsn-pagebuilder.html>.

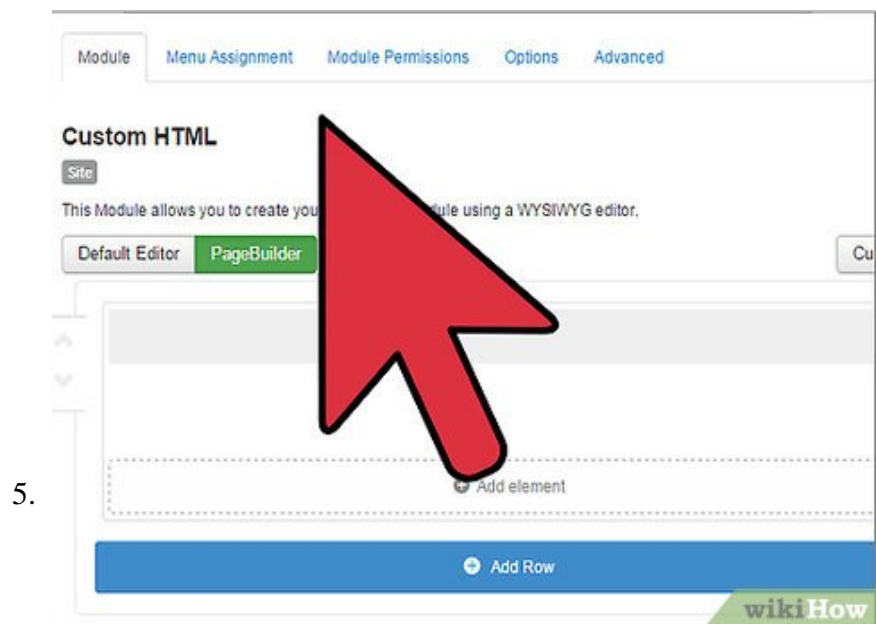

Go to the Joomla back-end. For example: yourJoomlawebsite/administrator

Install the downloaded package in the back-end. Go to Extensions ? Extension Manager ? Click the button "Browse" ? Select the installation file ? Upload & Install. The installation will complete after a few seconds.

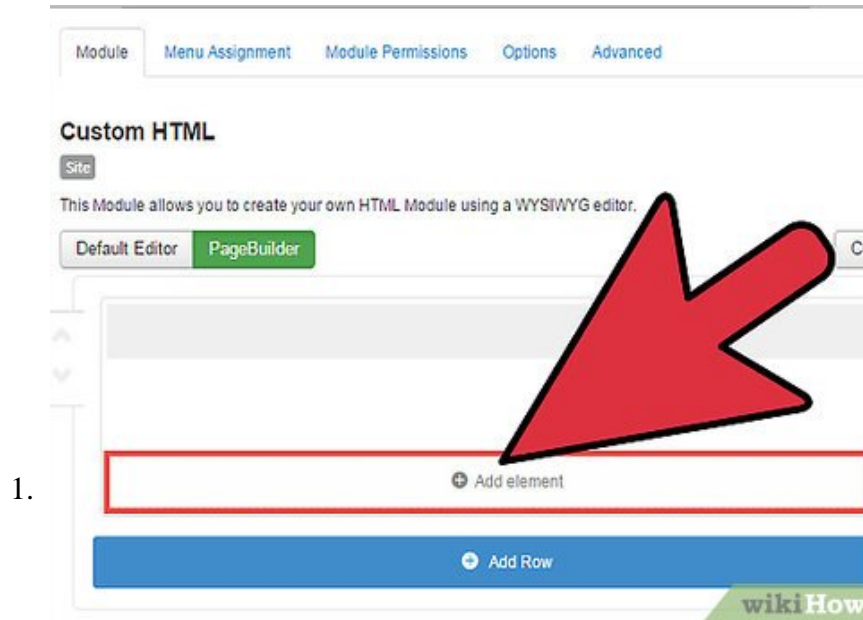

Select JSN PageBuilder to open interactive mode. Go to Content ? Article Manager ? Choose your current article/Add new article ? Select PageBuilder[BETA] (instead of Default Editor).

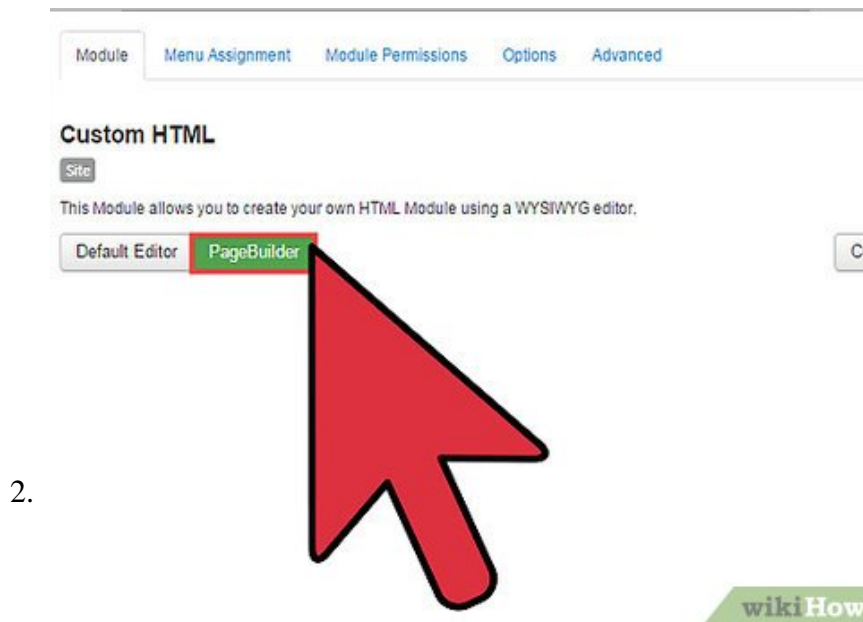

Define content layout. Click to add new rows and columns to the article. You can easily change the column widths to fit your purpose.

Method 2 of 2:

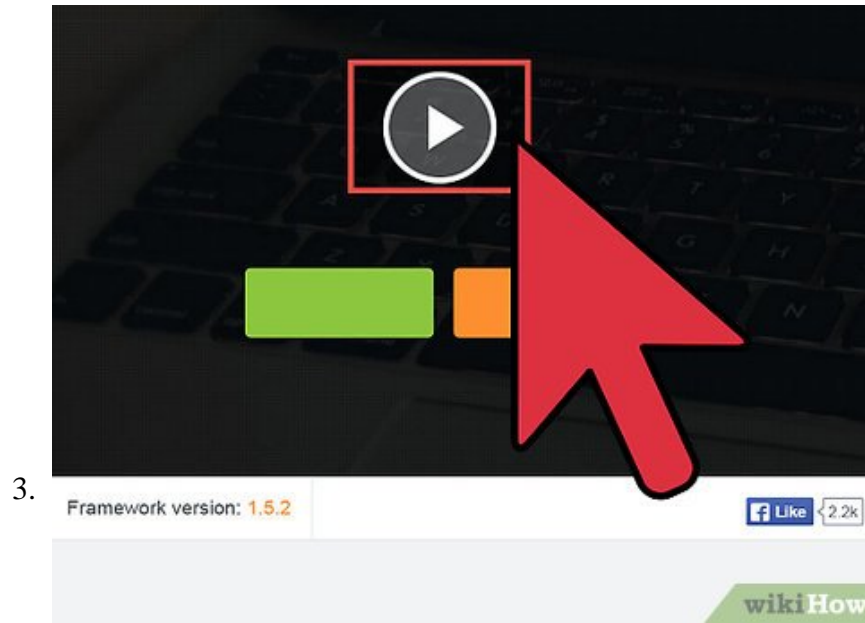

Add and customize elements for each content section

Click 'Add element' and select suitable type of content: JSN PageBuilder provides you with the most popular types of elements for a Joomla website.

Customize the elements. Select the element you want to customize and change the data, parameters, and styling.

View the page. View your front-page once you've finished editing content in your back-end with JSN PageBuilder
