

How to capture a sharper image when using the phone camera?

With the rapid development of technology, the shooting has become easier than ever when the new generation smartphones have camera integration. However, to capture a quality picture is not simple at all, especially amateurs. Today, TipsMake.com please share with you a few small tips to help you can take sharper photos with your phone.

With the rapid development of technology, the shooting has become easier than ever when the new generation smartphones have camera integration. However, to capture a quality picture is not simple at all, especially amateurs. Today, TipsMake.com please share with you a few small tips to help you can take sharper photos with your phone.

1. Accurate focus

When taking photos, let's focus on the subject we need to capture by touching the subject to focus on (AF) and then press shooting. Avoid falling into a situation where the need is blurry and the spot where you need it is not sharp. It is best to take a few consecutive shots, then filter out whichever is the best, then keep it.

2. Shoot in bright enough conditions

When we shoot in low light conditions, the image will lose focus due to the phone automatically adjusting the shutter speed and ISO. Therefore, you should take photos in sufficient light to get the best quality photos.

3. Anti-vibration

To prevent vibration for the phone, you can use the supporting device, Tripod, to ensure the best balance and vibration resistance. However, if there is no condition, you can prevent vibration by hand with 2 things

1. Be sure with both hands when shooting
2. Take a deep breath and hold your breath for a few seconds when shooting

On some of the latest models like **iPhone 6 Plus** , **Samsung Galaxy Note 4** , **Galaxy S6** , **Galaxy S6 Edge** , **Lumia 930** has integrated optical anti-shake function into hardware. With lower models, you can prevent software shake like **ProCamera** for iOS or **Camera FV-5** for Android.

4. Cleaning the camera

Although it is a small job, many people often ignore it (by being lazy or subjective). You should use a soft cloth to gently wipe and clean and avoid scratching the camera.

1. This tool will help you edit photos online, completely free
2. In this way, resizing images in bulk will not take much effort as before
3. Open, watching photos on Windows 10 too slow? This is how to fix it!

Having fun!
