

How to change DNS on iPhone, Android phones

Changing the DNS on your phone will help you maintain a stable connection, speed up your Internet connection and can access blocked websites.

Domain Name System is abbreviated as DNS, this is the domain name resolution system. DNS is now applied to access blocked websites like Facebook. There are many DNS users to change such as DNS VNPT, DNS OpenDNS .

One of the most popular DNS is Google DNS, which is a DNS that will help users access it more quickly and reliably. We have had to change DNS on computers and here is how to change DNS on iPhone and Android.

1. How to use the ipconfig command
2. How to find the available IP address
3. How to configure a static IP address on Linux

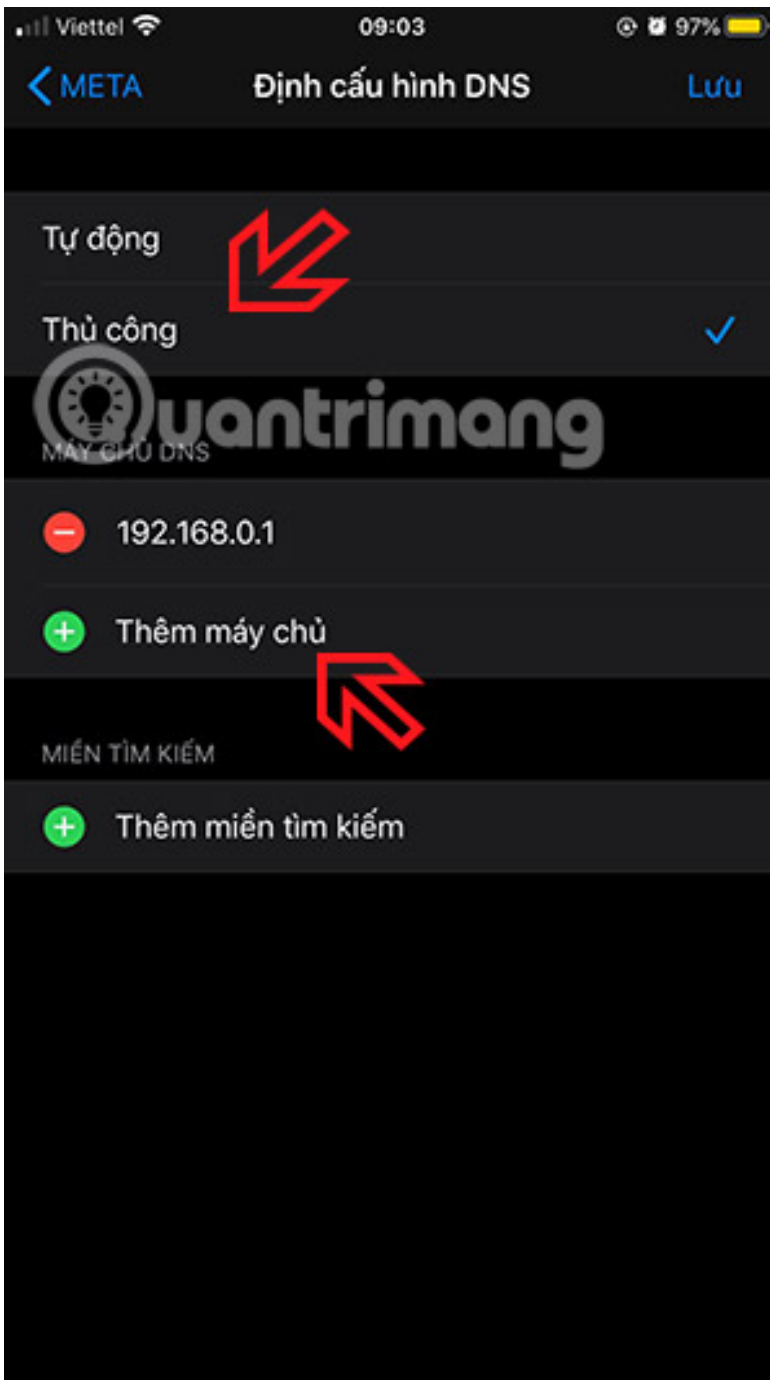

How to change DNS on iPhone

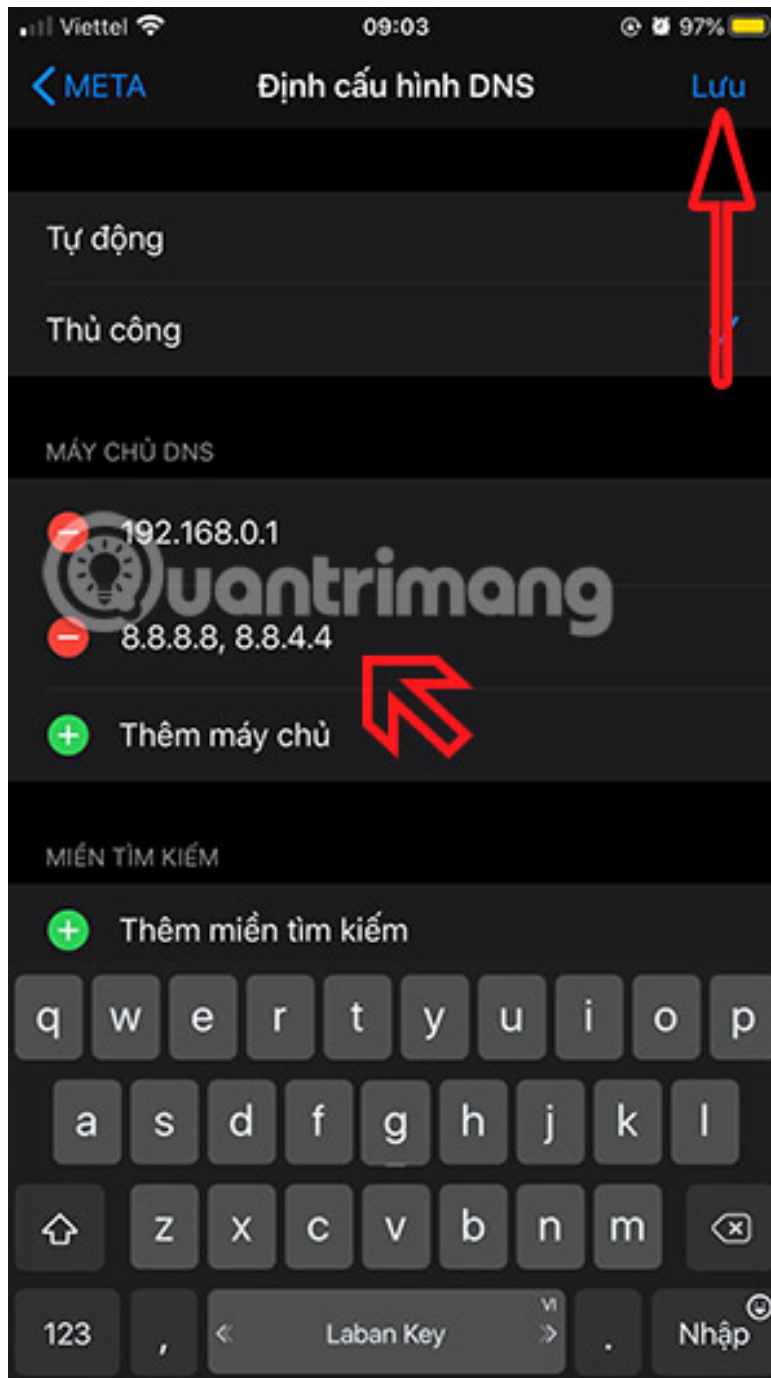

Step 1: First go into the Wifi menu, click on the advanced icon (the letter i) of the Wifi you are connected to. Next, scroll down and select **Configure DNS** .

Step 2: In the menu **Configure DNS** , select the Manual section, below, click Add server. Next, fill in **8.8.8.8** and **8.8.4. 4** and press **Save** as is.

Change DNS on Android

Step 1: Go into your Wifi menu, select the gear icon advanced at the connected Wifi and select the edit icon (pen image) in the upper right corner.
