

How to change iMessage iOS font with Custom Message Styles

With iOS 10 upgrade, we were able to use some more effects on iMessage. However, the font side of iMessage still doesn't change when we still use the default font.

The iOS 10 upgrade brings users the most new and attractive experience compared to previous iOS versions. Including iMessage, when users can send bubble messages with the effect of changing the frame for the messaging interface. However, it is regrettable that even though it is provided with many effects, the font on iMessage remains the same from previous iOS versions to the latest iOS 10 version. So how to change the font on iMessage? To do that, we will need the application installed on iOS devices, the Custom Message Styles application.

Step 1:

First of all, download the Custom Message Styles application according to the link below and proceed with the installation on the device.

1. Download the Custom Message Styles application

Step 2:

Next, we proceed to install the application on the device. At iMessage interface, we click **the Appstore icon** and then select the **Custom Message Style** application.

Step 3:

At the message interface, click **Message Styles** . After that, the user can **select the type of font to use and the type of background for the messages to be sent**. We swipe left or right to select the font style as well as the background color for the message. The app provides users with many unique options.

Step 4:

After you've selected the font style and the background color for the message, click the **Type your Message box** to enter the message. The message will be automatically changed to the font and wallpaper that we selected.

Finally, click **Send** to send the message.
