

How to change number format in Windows 11

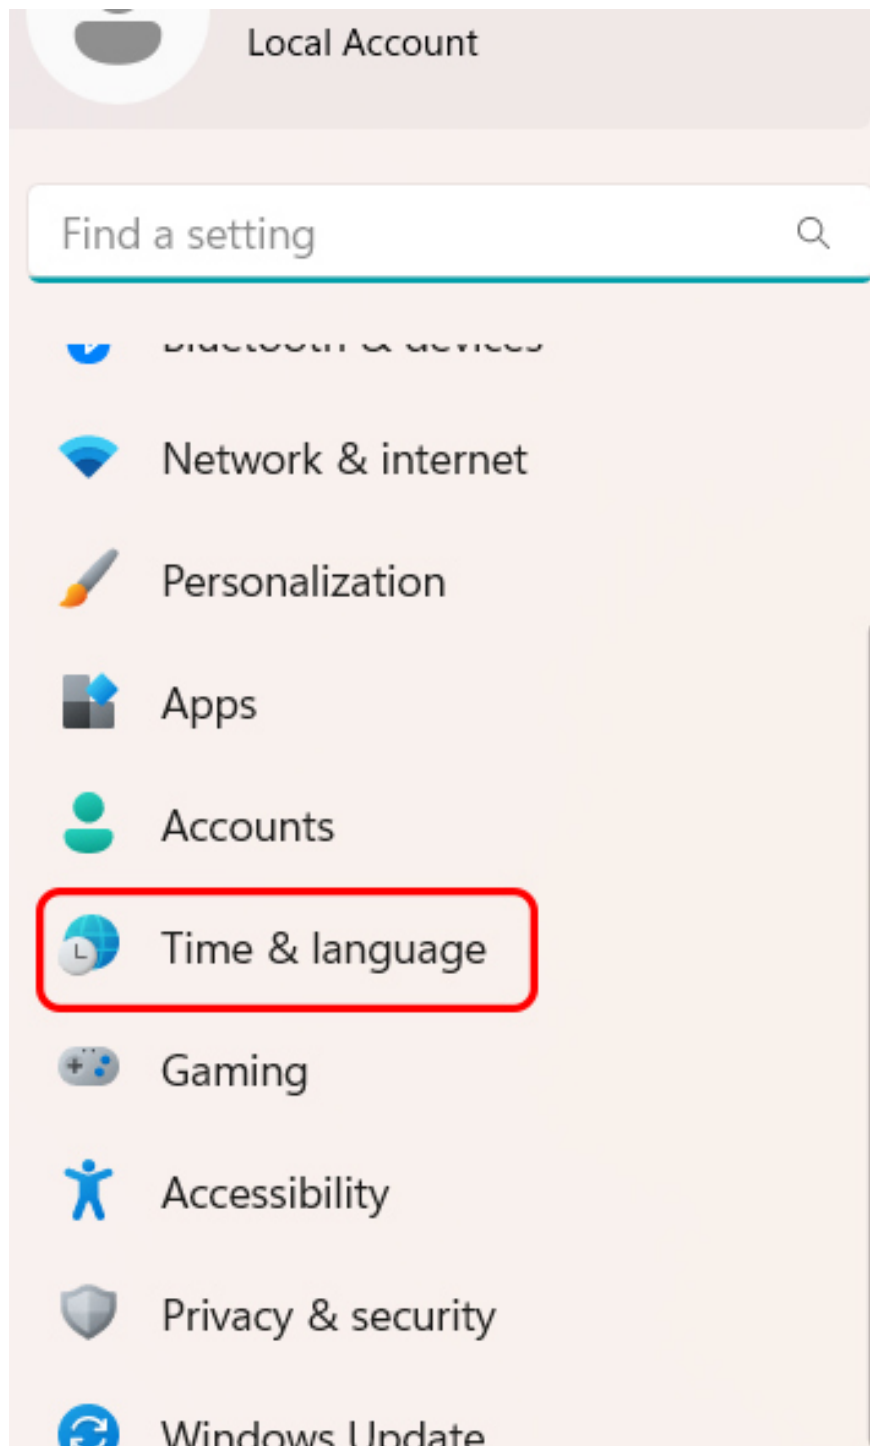

Number formats determine how numbers are displayed, including your choice of decimal separator (such as a period or comma) and thousands separator. Here's how to change the number format in Windows 11.

Regional format settings affect how dates, times, numbers, and currency are displayed on your computer. Windows supports many languages, along with currency and date/time formats for the countries/regions that use those languages. Number formats determine how numbers are displayed, including your choice of decimal separator (such as a period or comma) and thousands separator. Here's how to change the number format in Windows 11.

Instructions for changing number formats in Windows 11

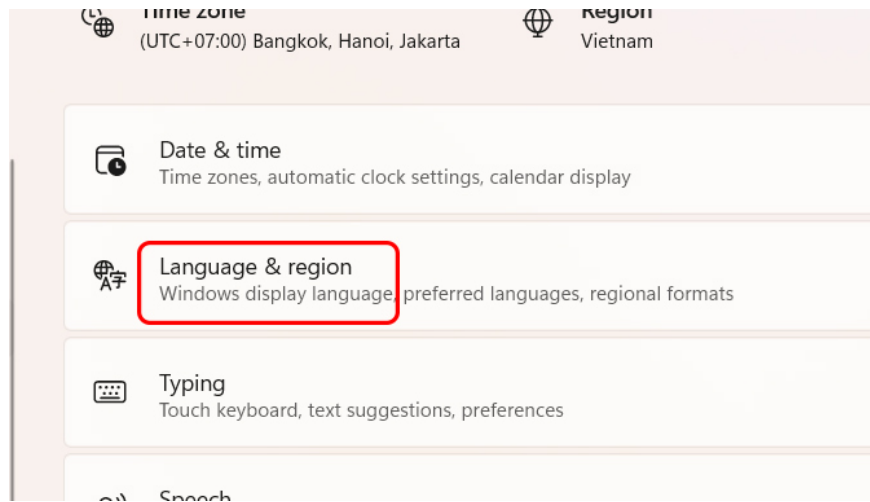

Step 1:

Press **Windows + I** to open **Settings** . Then select **Time & language** in the list on the left of the interface.

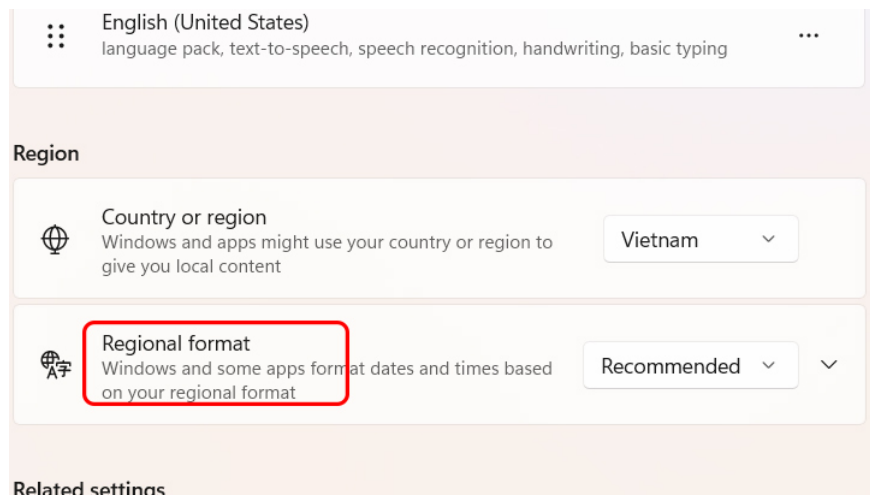

Step 2:

Look at the settings on the right, click on **Language & region** to reset the region for your computer.

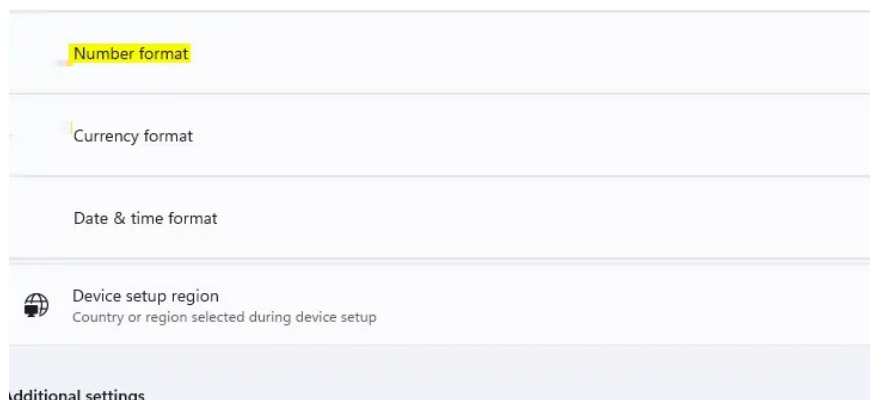

Step 3:

In the language and region adjustment section, **scroll down to Region and select Regional format** .

Step 4:

In the extended format interface for regions on Windows, **click on Number format** to change the number format on Windows.

Select the number format from the drop-down menu that you want to change depending on the usage you usually use.
