

How to change objects in photos with Canva AI very quickly

With Canva, you can use the AI technology that this tool brings to you to create photos with Canva AI descriptions, or change the object in the image with anything you want.

AI technology has now been applied a lot to develop and support different ideas. With Canva, you can use the AI technology that this tool brings to you to create photos with Canva AI descriptions, or change the object in the image with anything you want. Accordingly, we also describe the object we want to change in the image and then Canva will proceed to change based on the original original image. The following article will guide you to change the object in your photo with Canva AI.

Instructions to change objects in photos with Canva AI

Step 1:

First we upload the image to be edited to Canva, or immediately select the design saved in Canva. In the photo editing interface, click on the image and then **select Edit photo** .
