

How to move Chrome Android address bar down

Chrome Android is gradually updating the feature to move the address bar to the bottom of the interface for all regions around the world.

Chrome Android is gradually updating the feature of moving the address bar to the bottom of the interface for all regions in the world. The feature of moving the address bar to the bottom on Chrome iOS has been updated for users for a long time and is now available for Chrome Android users. You do not need to change deep in the Chrome system, just adjust the change in the settings of the Chrome Android browser. Below are instructions for moving the Chrome address bar to the bottom.

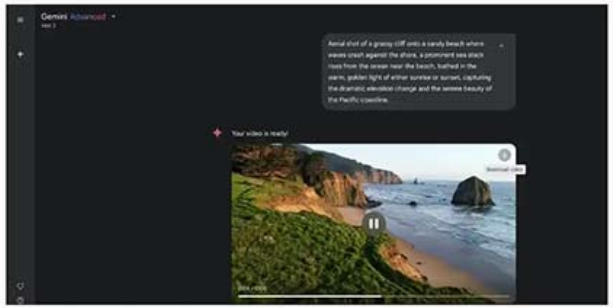

How to move the Android Chrome address bar down

First you need to update Chrome Android browser to the latest version 135, or if not, wait for the update in the near future.

Next, open your browser as usual and access the website. Next, **press and hold the address bar** and select **Move address bar to the bottom** .
