

How to change the boot logo of Windows 10 and Windows 11

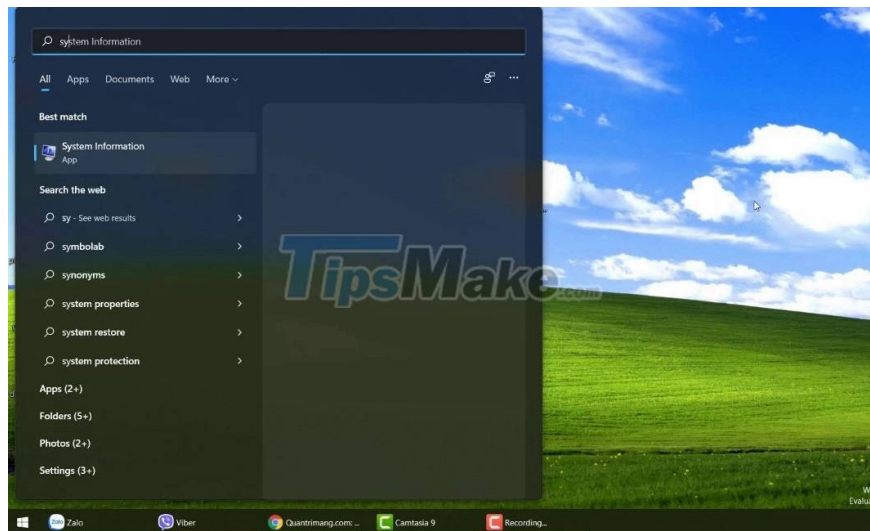

Surely you have noticed that when you start your computer, it often displays the Windows logo. So is that logo customizable?

The answer is yes and in this article TipsMake.com will show you how to do it with detailed video instructions.

Part 1: Some notes

Before starting the installation, I have a few notes for you:

1. You need to have a basic knowledge of Windows because the installation process does not always go smoothly.
2. This method works with both Windows 10 and Windows 11.
3. You should check System Information, if the machine already has UEFI, then proceed with the installation. If you do not have UEFI, you need to install UEFI first.

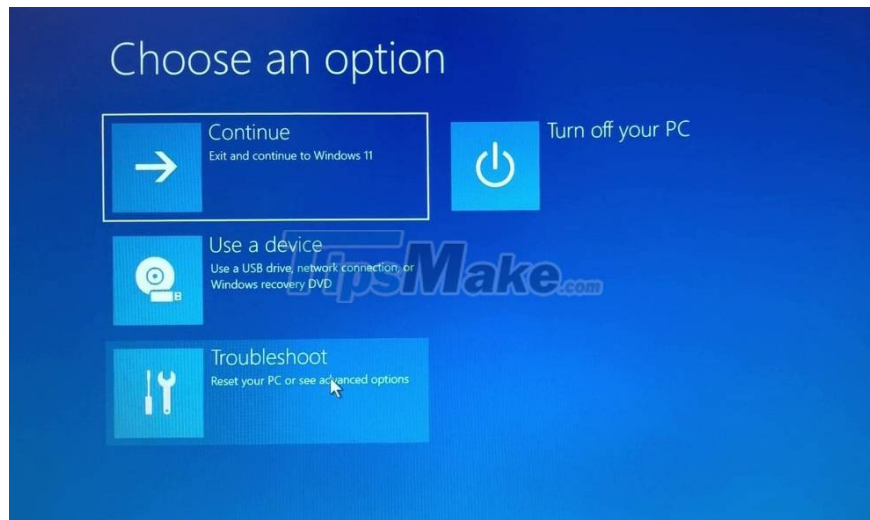

Item	Value
OS Name	Microsoft Windows 11 Home Insider Preview Single Language
Version	10.0.22523 Build 22523
Other OS Description	Not Available
OS Manufacturer	Microsoft Corporation
System Name	LAPTOP-86N086C2
System Manufacturer	Acer
System Model	Aspire A315-54K
System Type	x64-based PC
System SKU	0000000000000000
Processor	Intel(R) Core(TM) i3-8130U CPU @ 2.20GHz, 2208 Mhz, 2 Core(s), 4 Logical ...
BIOS Version/Date	Insyde Corp. V1.05, 10/25/2019
SMBIOS Version	3.0
Embedded Controller Version	1.07

BaseBoard Product	Sleepy K2
BaseBoard Version	V1.05
Platform Role	Mobile
Secure Boot State	Off
PCR7 Configuration	Elevation Required to View
Windows Directory	C:\WINDOWS
System Directory	C:\WINDOWS\system32

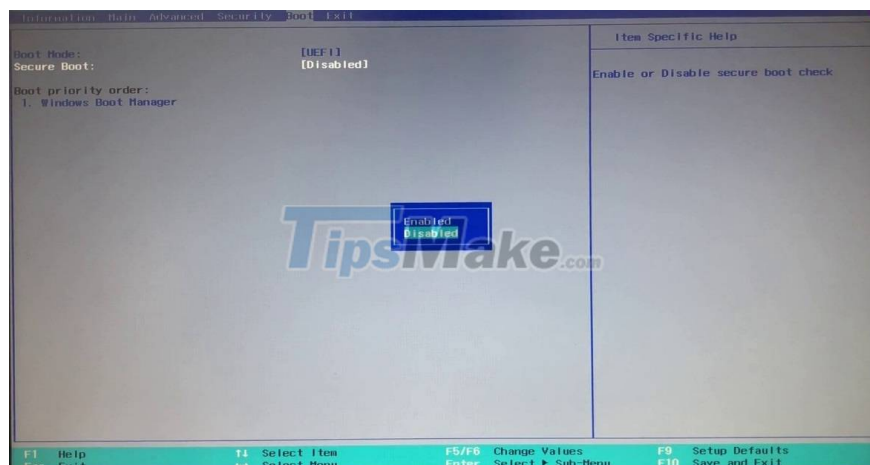

Part 2: Adjust Secure Boot in BIOS

In this section, you need to access BIOS then disable Secure Boot:

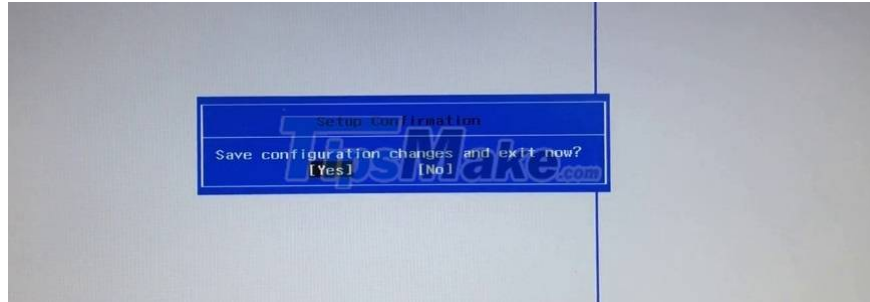

Step 1: You need to press and hold the SHIFT button then press Restart the machine and then follow the steps in the video below to access the BIOS. Or you can also refer to how to access BIOS in the article: Instructions to enter BIOS on different computer lines.

Step 2: You find and disable (Disabled) the Secure Boot option.

Step 3: Press F10 and Enter to save the settings and exit the BIOS.

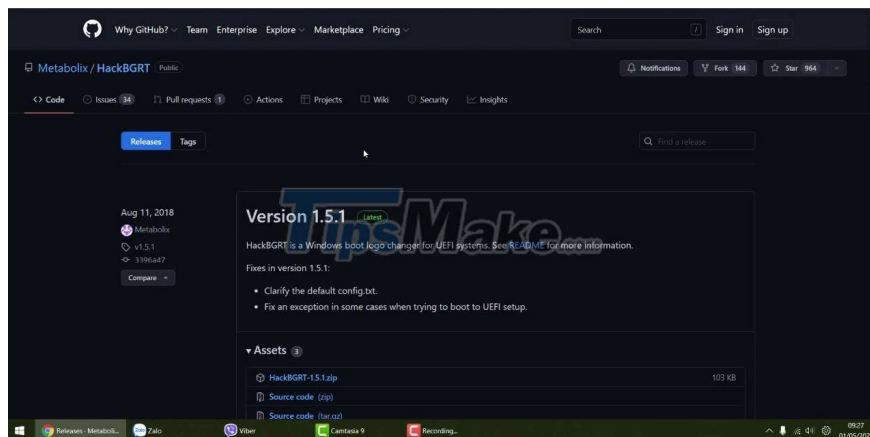

Part 3: Install the tool

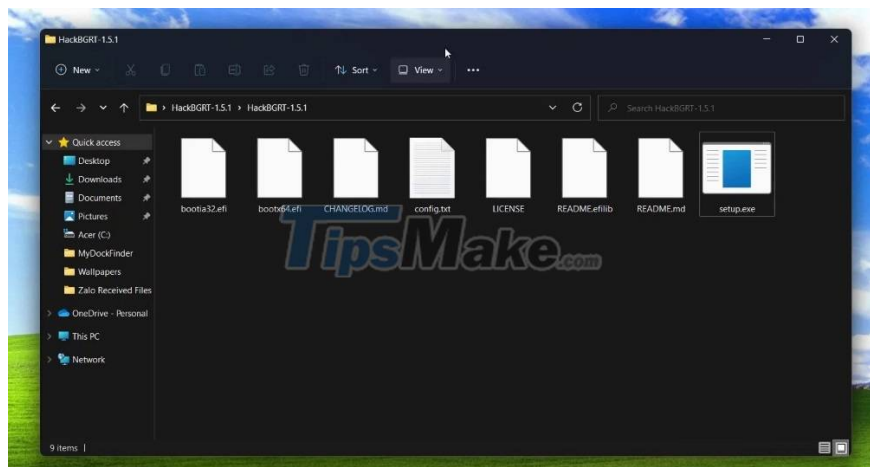

The steps to install the tool are quite simple:

Step 1: Visit the GitHub page below to download and install the HackBGRT tool,

[Download HackBGRT Tool](#)

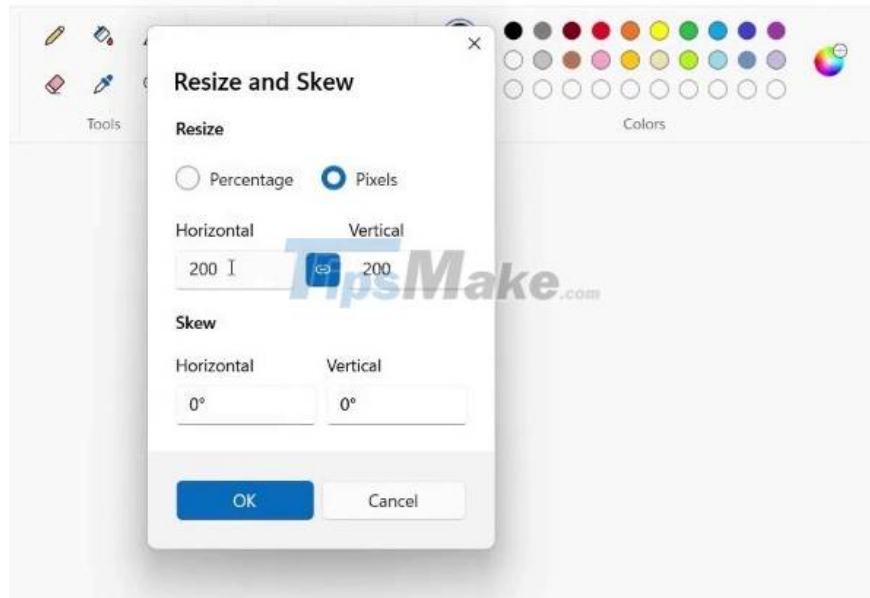

Step 2: Extract the tool, then open it and leave it temporarily.

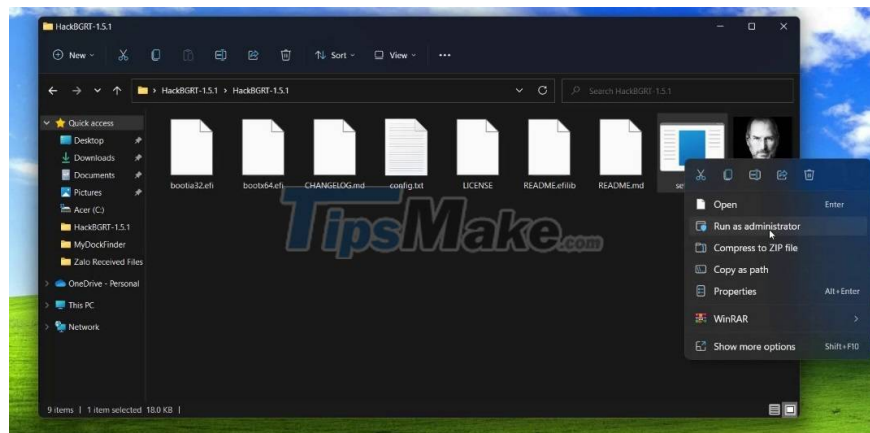

Step 3: Adjust the image you want to use as a logo with Paint to the optimal size of 200x200px. Press Ctrl + A to select and then press Ctrl + C to copy the image.

Step 4: Open the splash.bmp file in the folder of the HackBGRT tool with Paint. Resize the image to 200x200px then press Ctrl + V to paste your image in. Press Ctrl + S to save then close the Paint windows.

Step 5: Right-click the setup.exe file and select Run as administrator and then click Yes to confirm opening the tool.
