

How to change the call interface on Android

In this article will help you change the call interface with two applications, Color Flash Launcher and Color Phone Flash

If you get bored with the incoming or outgoing call interface on your Android phone, the Color Phone Flash application will be a bad suggestion for you to bring about a very interesting change. This is an application that allows you to customize the call screen with beautiful themes and visual effects to create a unique style, ensuring fewer "touches" and expressing your personality.

SET

Finally, click **Allow** to allow the application to run, noting that the application will be able to read all your notifications, including the name of the contacts and the content of the messages you receive.

This app can also ignore notifications or activate keys in notifications and some other features.

There are many call effects that you can select and change when using on the **Color Flash Launcher application** . In addition to the application that changes this call effect, you can refer to the **Color Phone Flash** application below.

2. Guide to change the call interface on Android with Color Phone Flash

Step 1:

Download and install the Color Phone Flash application to your phone via the link below.

1. Download Color Phone Flash for Android

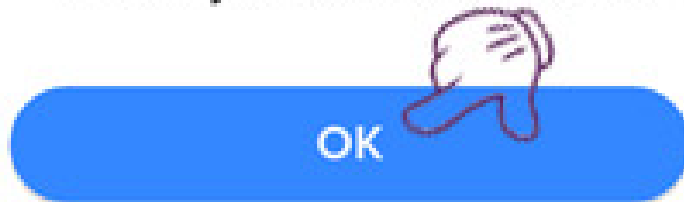

Note: The application is compatible with Android OS 4.0 and above and your Android phone needs to have at least 20Mb of device memory.

Step 2:

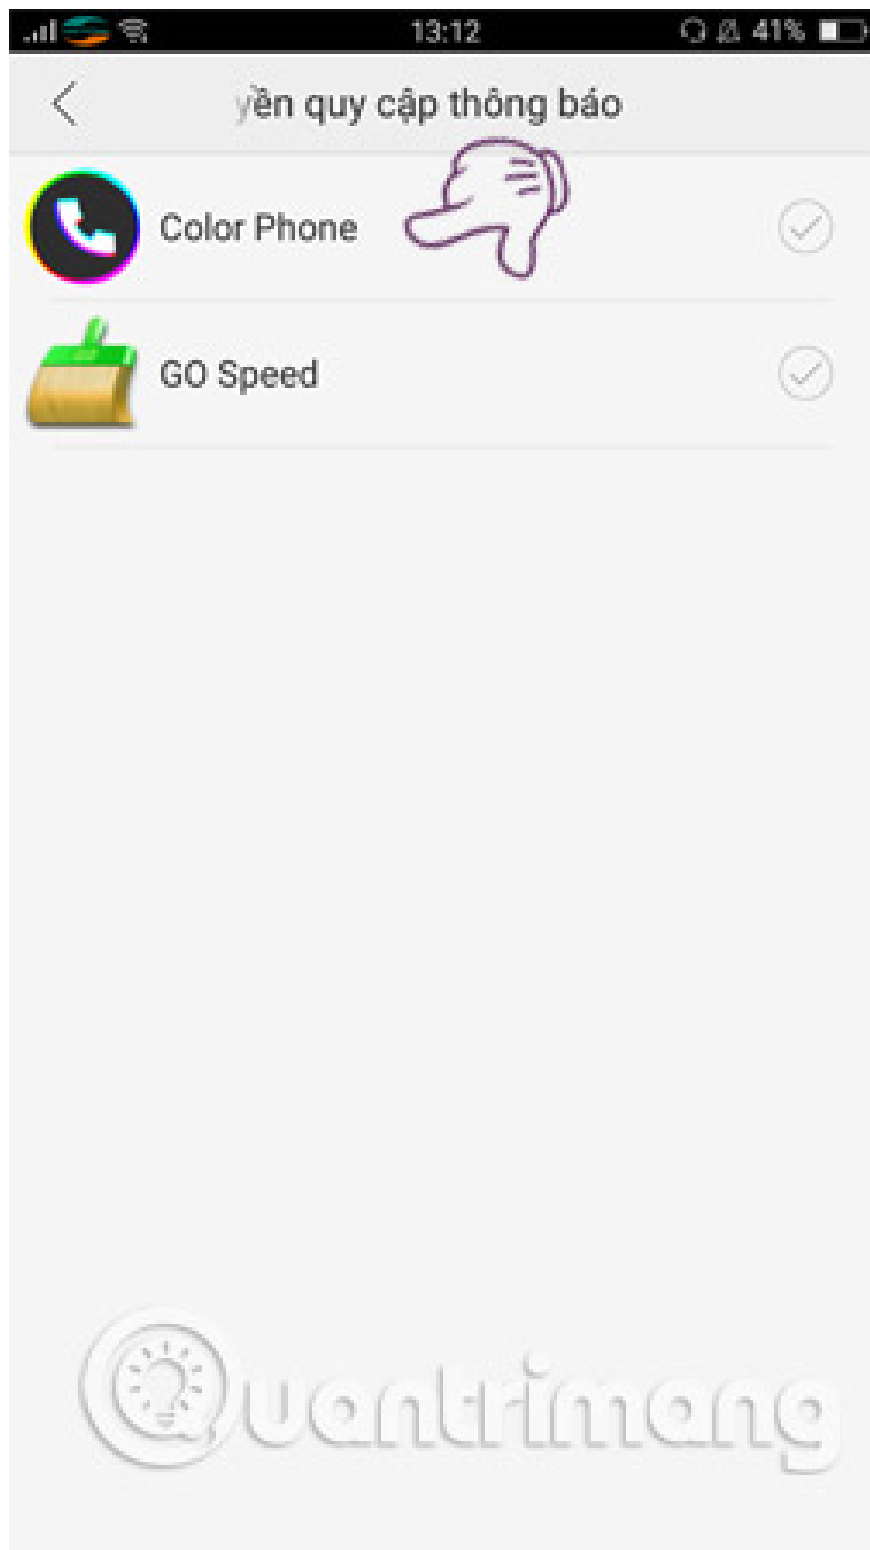

Start the application, the first time you use it, you need to grant the application access by clicking *OK*. Next, the application will take us to the Notification Settings interface, here you will press to confirm the notification of *Color Phone* as shown above.
