[Chameleon latest release x64](#)

Wallpaper Pack:

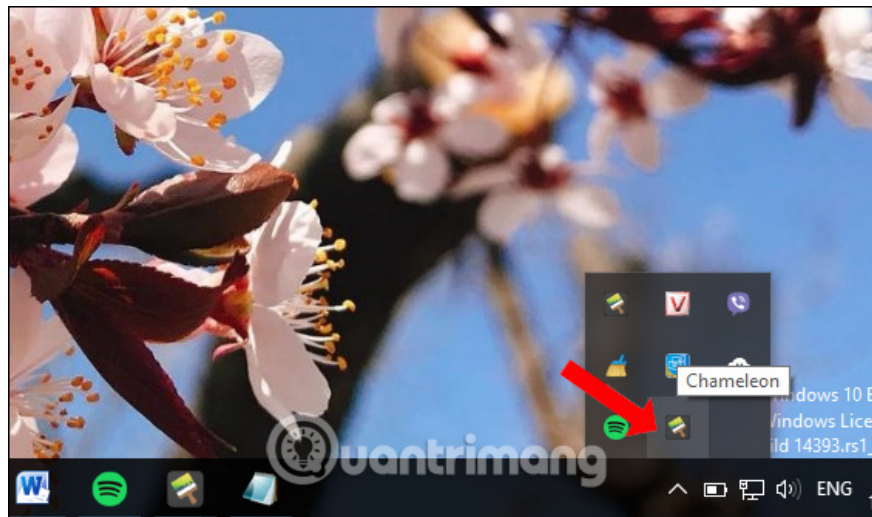

A collection of high quality 4K wallpapers for each setting. You can use them as the Chameleon executable and launching the program. On startup, it will download and apply the images. This may take a while (a couple minutes), depending on your CPU.

Minimum Requirements

Chameleon is fairly light on resources while it's running. The minimum requirements are:

Step 2:

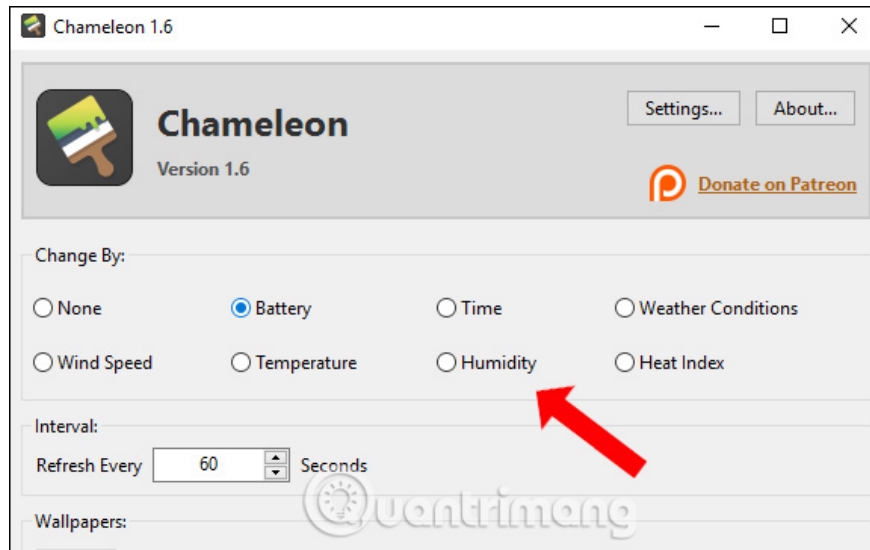

After downloading, just click on the installation file to launch without performing the usual settings. The application icon will be displayed in **the computer system tray** .

Step 3:

In the application interface, we will see there are options to change the wallpaper in the Change By section like follow battery capacity (Battery), time (Time), according to Weather Conditions, temperature (Temperature), .

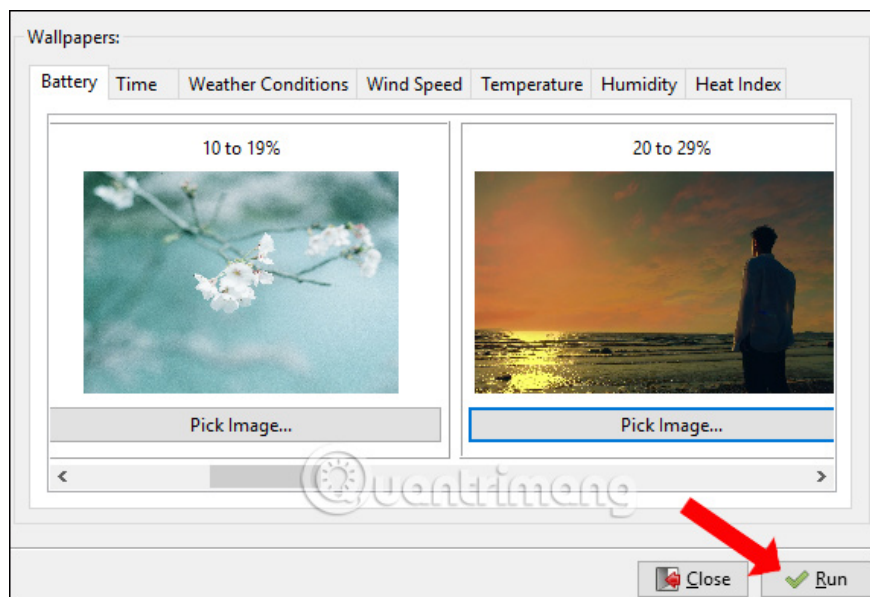

For example, to change the wallpaper automatically according to the battery capacity clicked on **Battery** .

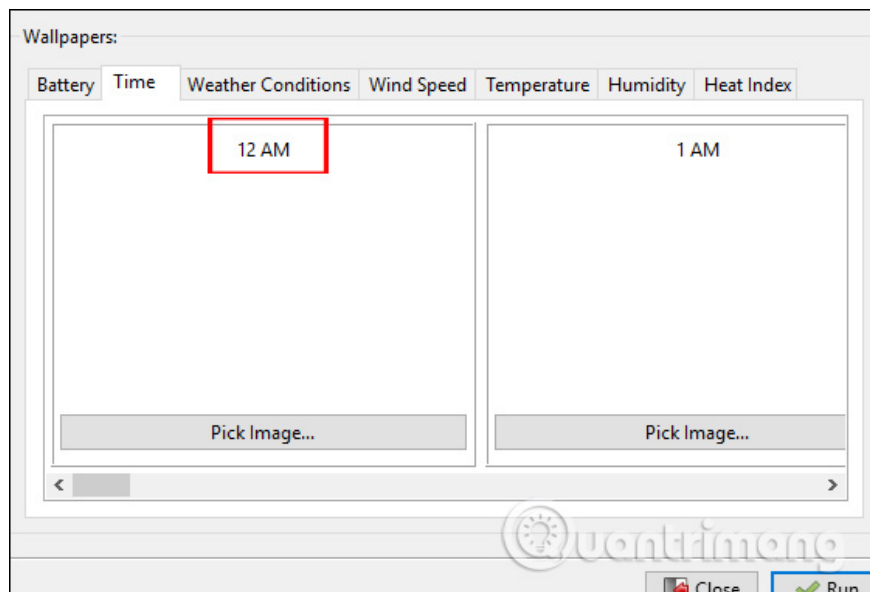

Step 4:

Scroll down to the bottom of **Wallpapers** to use to set the background image corresponding to the theme of changing the background image above. If you change the background image according to the battery capacity, click on **Battery**.

The change of background image according to the battery will be divided into Chameleon% different milestones. Click **Pick Image .** to select the wallpaper. After selecting, click **the Run button** to apply.

If you want to **change the wallpaper from time to time** , select **Time** at **Change by** and also select **Time** under **Wallpapers**. Photos will be changed every hour and start from 0 hours.

So you have more tools to refresh your desktop wallpaper. The image will automatically be changed according to the element that the user has set up.
