

How to change the file download folder on iTunes

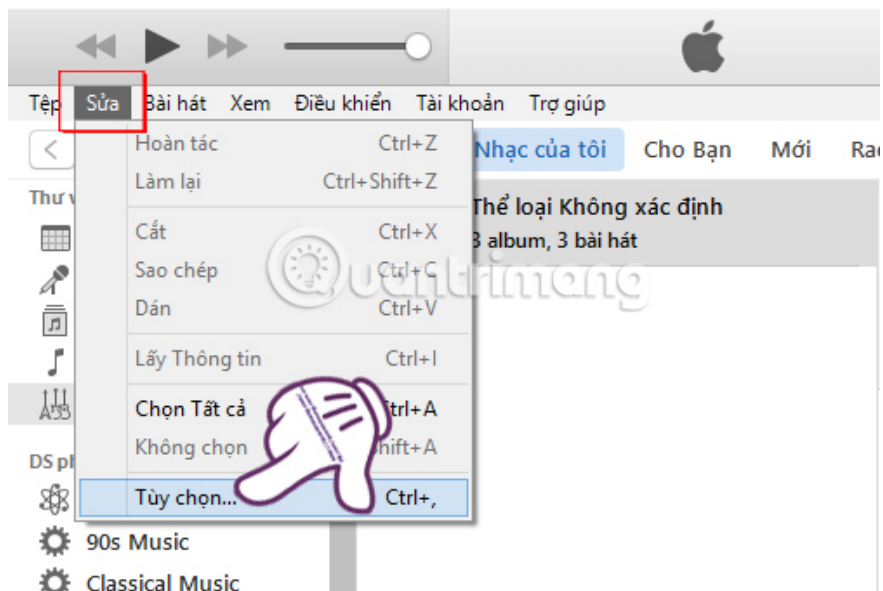

When installing iTunes on the computer will default to the download folder of the file. However, if you want to change the download folder on iTunes to make it easier to use, it is also simple.

For those who have the products of Apples, it is certainly no stranger to the iTunes tool. Support users can copy audio files, images, or data from computers to iPhone / iPad, iTunes is one of the indispensable software when using iOS devices. And when we install iTunes on the computer, the downloaded files will always be saved in a default folder. If you want to change the location of the iTunes Media folder to save the downloaded file for more convenient use, it is also very simple. In this article, Network Administrator will show you how to change the location of the folder where the downloaded files are stored on iTunes.

1. Download iTunes for Windows
2. Download free iTunes for Mac

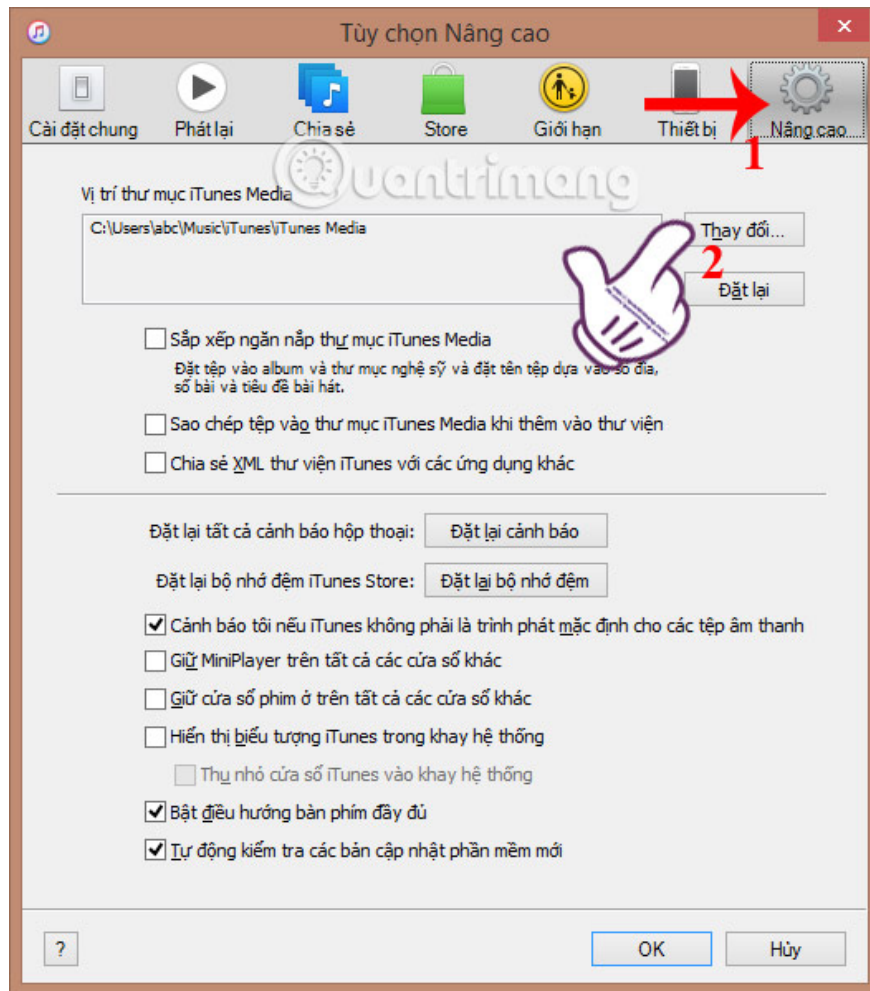

Step 1:

We open iTunes on the computer. Next click on **Edit** and click **Options** . You can change the language on iTunes to Vietnamese as shown below to make it easier to use. Refer to how to change the iTunes language in the Guide to changing iTunes language to Vietnamese.

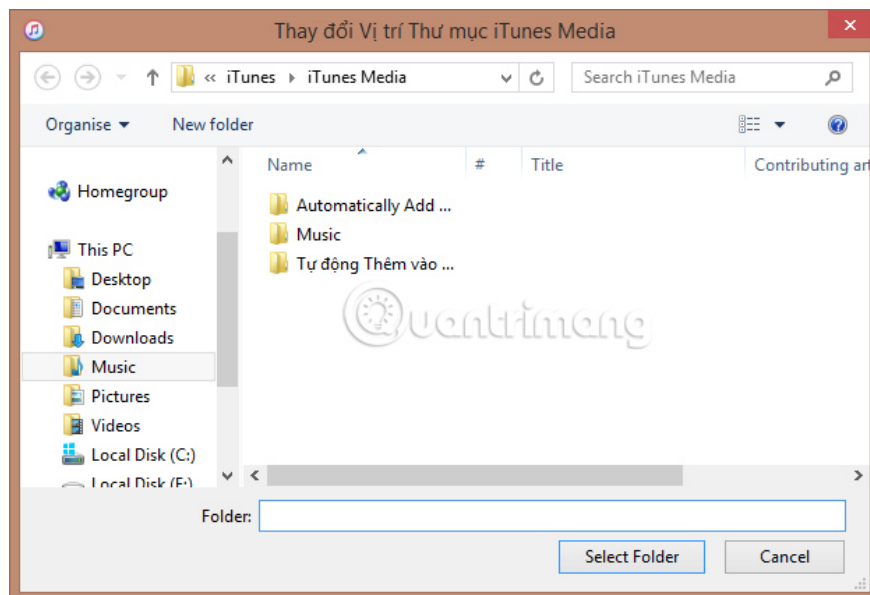

Step 2:

A new window appears. **General options** . Here, we will click on the **Advanced** tab. Then, just below the **iTunes Media folder location** , click the **Change** button.

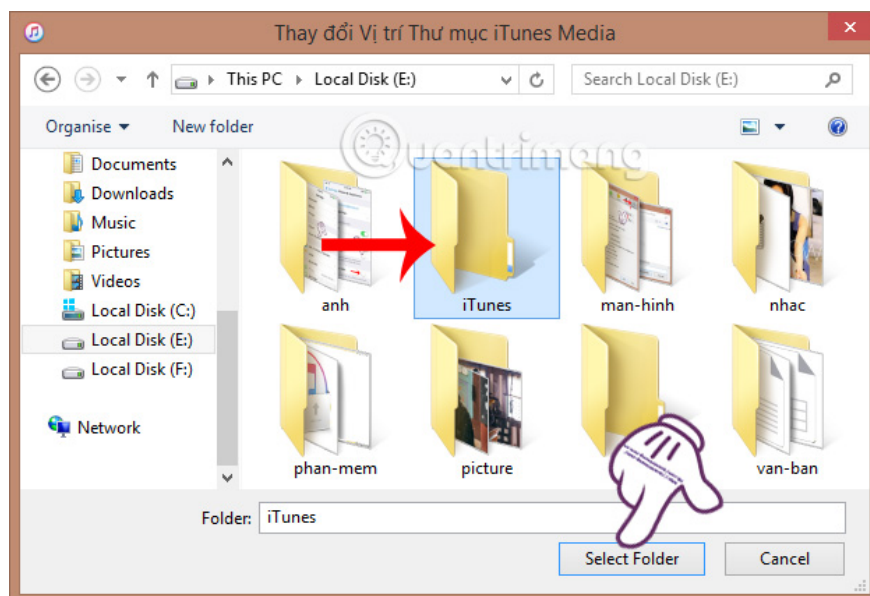

Step 3:

Window interface **Change Location iTunes Media folder** appears. Here, the downloaded files will be stored in the iTunes Media.

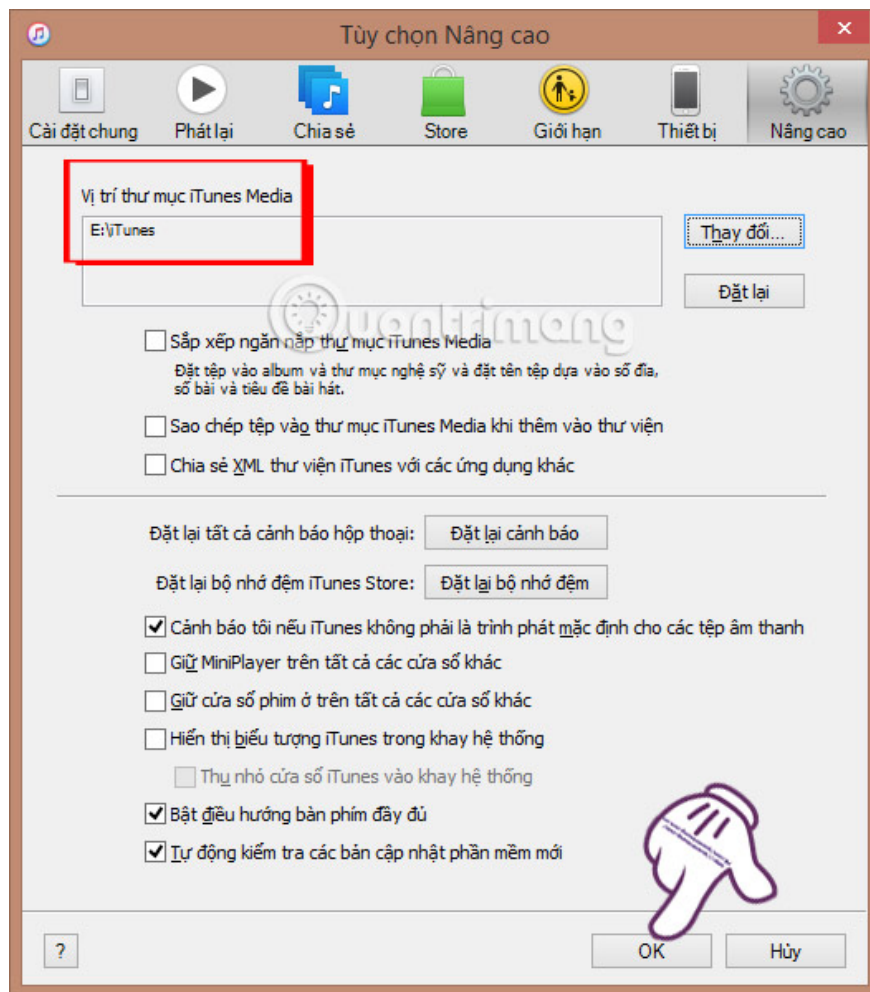

Step 4:

Next, we can choose any folder in the computer to change the location of downloaded files to iTunes. After selecting, click **Select Folder** just below.

Step 5:

Going back to the **Advanced Options** window, you will see **the location of the** newly selected **storage** folder appear in **the iTunes Media folder location** . Finally click **OK** to save this new setting.

So you've finished changing the directory to store downloaded files to iTunes. With this method, we can search for data more quickly, and balance the amount of memory used between drives on the computer.
