

How to change the file extension in Windows 10

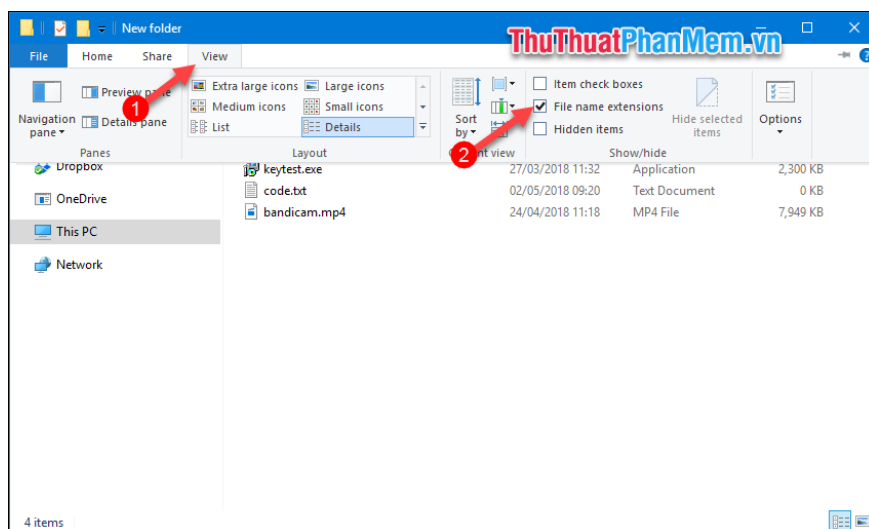

By looking at the file extension, we can identify what kind of file it is and which software it is used for. Of course, this file extension can be changed easily. So how can you change the file extension in Windows 10?

As you probably know, there are many different file formats in Windows and each file format has an extension, also known as a file extension. By looking at the file extension, we can identify what kind of file it is and which software it is used for. Of course, this file extension can be changed easily. So how can you change the file extension in Windows 10? Invite you to refer to the following tutorial.

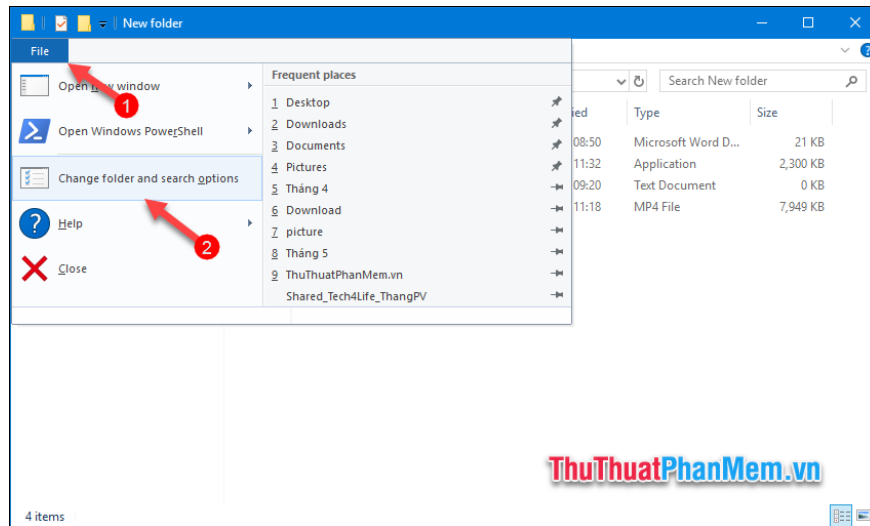

How to display file extensions and file extensions in Windows 10

To change the file extension in Windows 10 we first need to show the file extension because the default file extension will be hidden to help avoid confusion when we manage the file. To show the file extension, follow these steps:

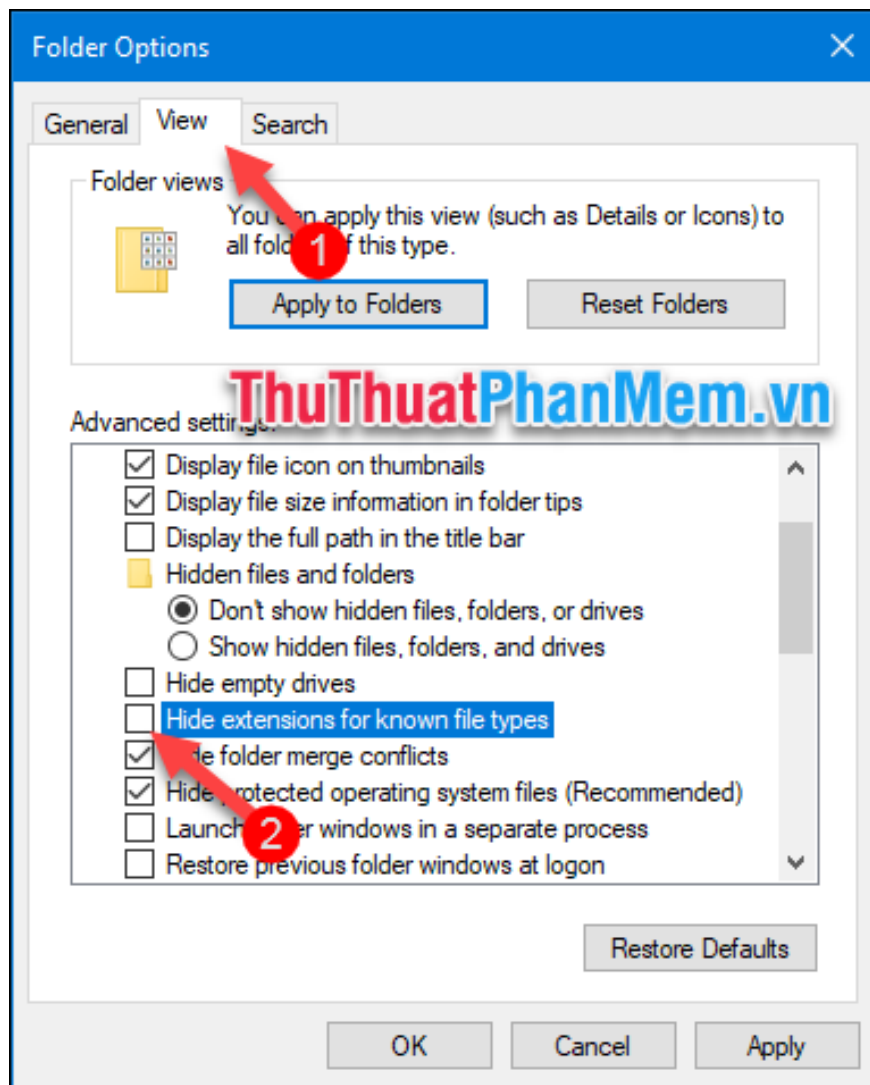

First, you open any folder then you select the **View** tab and check the box for **File name extensions**

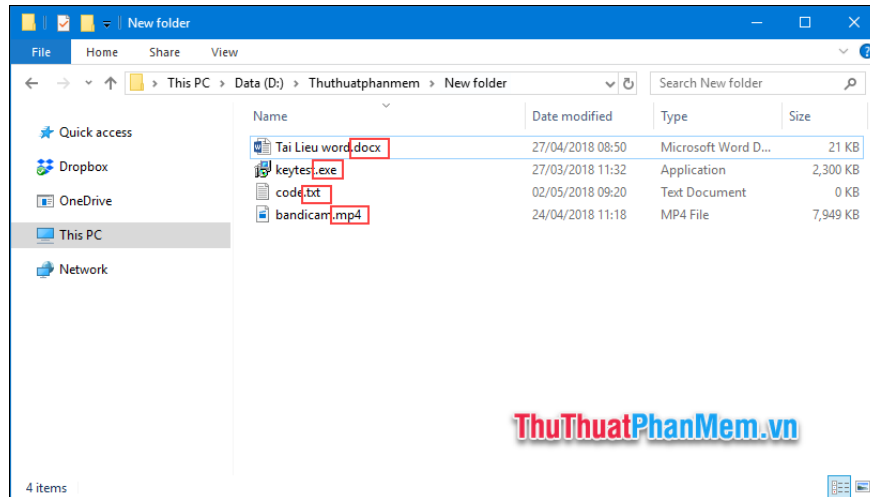

Or another way like on windows 7 is that you choose **File -> Change folder and search option**

New window pops up and you select the tab **View** then **uncheck** selected in line **Hide extensions for known file types** and click OK.

And now you will see the file extension has been displayed

To change the file extension is very simple, you just need to mouse over the file and select **Rename** then you just need to delete the old extension and type the new extension and press Enter. If there is a message, click Yes.

Above Thuthuatphanmem.vn showed you how to display the file extension on Windows 10 and change the file extension with just and simple steps. Thank you for watching the article!
