

How to change the Home app wallpaper on Mac

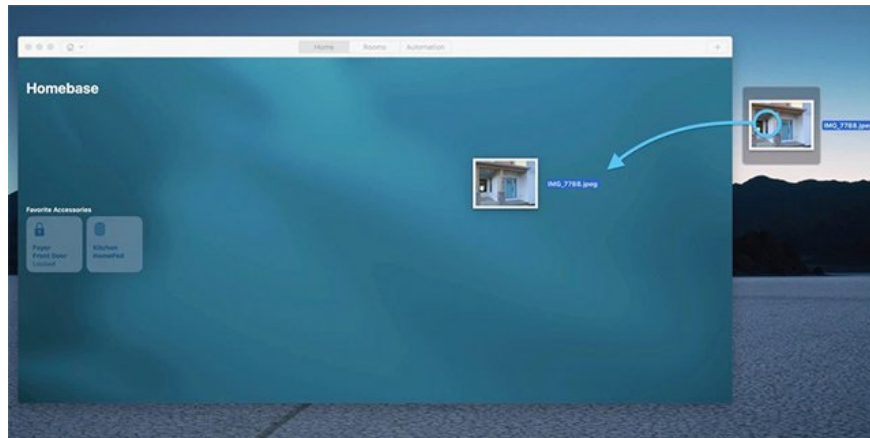

The Home app on Mac supports you to change your picture and we can do it in 2 different ways.

The Home app on Mac also has the option to change the wallpaper, similar to the Home app on iPhone / iPad. However, when you change the Home application on iPhone, it will not be synchronized with the Home application on the Mac, so users must do it directly on the Mac. There are 2 different ways for you to set a wallpaper for the Home app on Mac and are guided in the article below.

Instructions for installing the Home application wallpaper on Mac

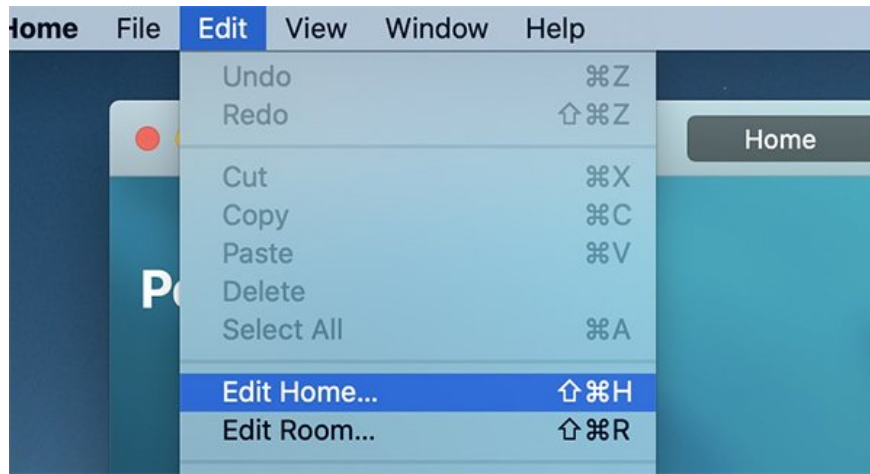

Method 1:

We **open the Home application** , then if there is an **image file on the desktop** , just **drag that image into the Home interface** to set the wallpaper.

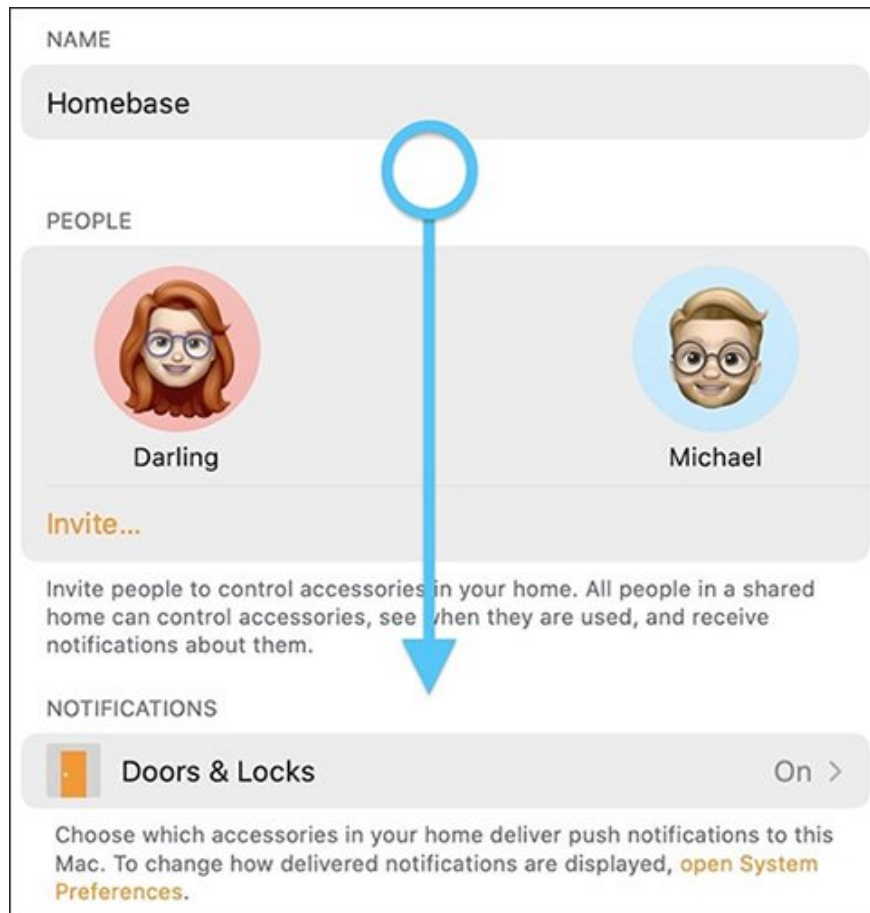

Method 2:

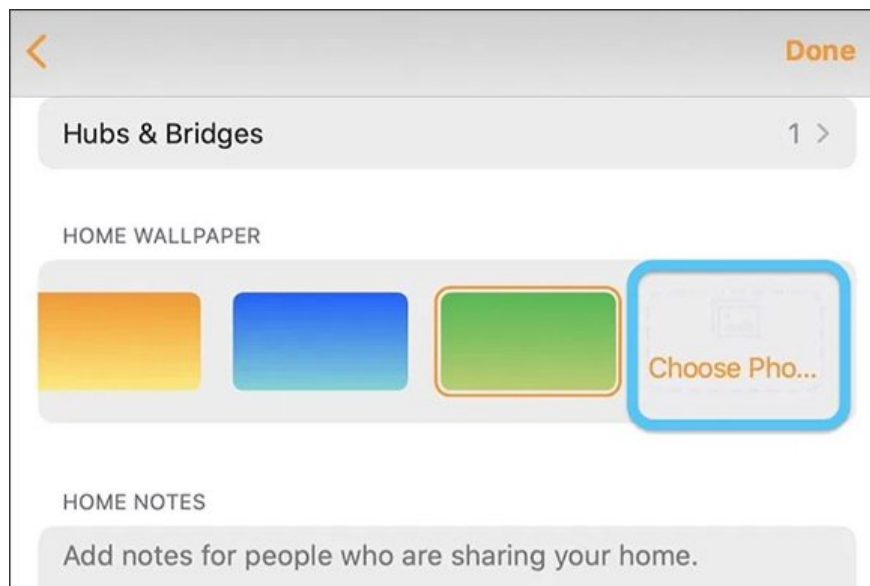

In the Home application interface, click **Edit** then select **Edit Home .** in the list shown below.

Then display the new interface, users **scroll down and navigate to the Home Wallpaper section** and then click to use.

In the Home Wallpaper section, we **drag right** to the last item until we see the **Choose Photo** option, then click. Now you find the folder containing images you want to use as wallpaper for Home, then press to use is finished.

In general, both methods are very simple. With method 1, you need to put the image you want to set as the wallpaper for the Home application on the desktop first and then drag it to the application interface, and with the second method, they can immediately select the image in a folder on a Mac.
