

How to change the language system in Windows 10

When installing and setting up Windows 10, the system will require language selection, which you can change later. The article will show you how to change the language system and add the language for the default system on Windows 10.

When installing and setting up Windows 10, the system will require language selection, which you can change later. The article will show you how to change the language system and add the language for the default system on Windows 10.

1. How to convert Windows 8 / 8.1 keyboard language

How to change the system language on Windows 10

Changing the system language in Windows 10 is very simple, follow these steps:

Step 1: Click **Start > Settings > Time & language** .

Step 2 : Switch to **Region & language** tab.

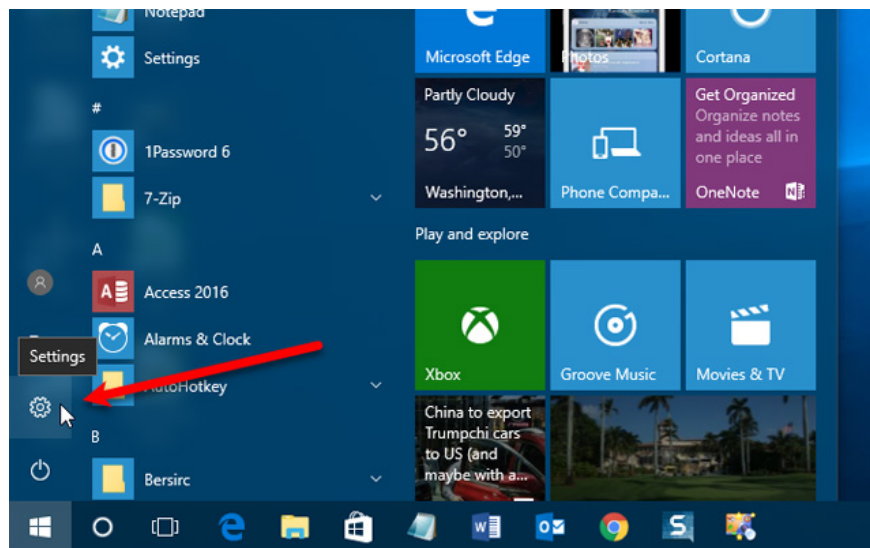

Step 3: In the **Languages** section, click **Add a language** and select the language from the list.

Step 4: Go back to the **Region & language** tab, click the **Options** button for the new language to check if you need to download the language pack.

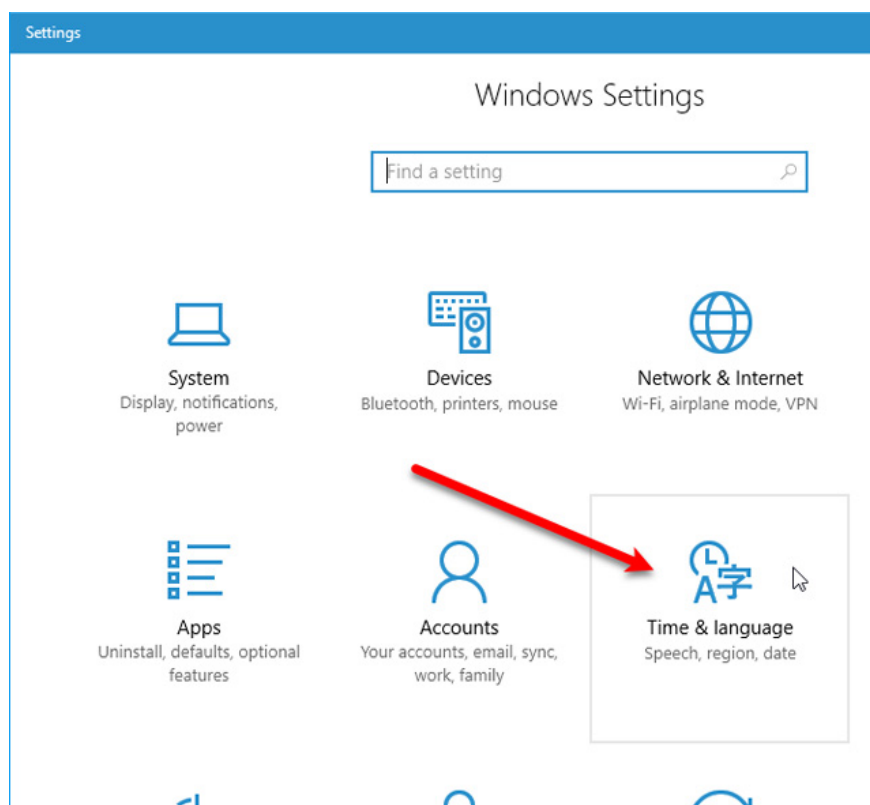

Step 5: To apply the new language to the system, click **Set as default** , then log out and log back in to apply changes.

Access the Time and Language option

To access the **Region & language options** in the system settings, click the **Start** button and then click the gear icon on the left side of the **Start** menu.

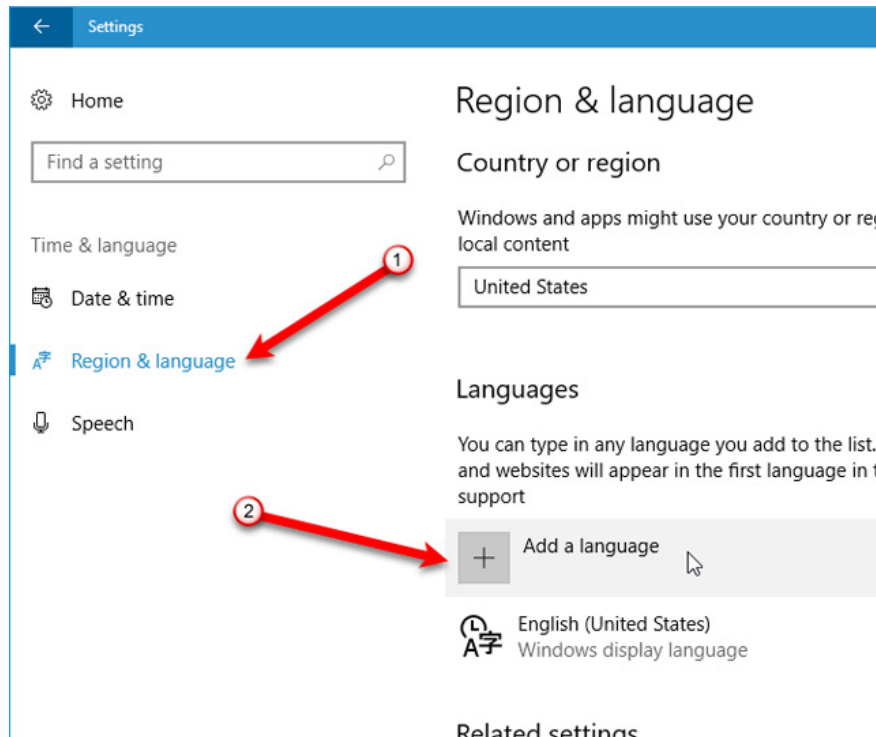

On the **Windows Settings** screen, click **Time & language** .

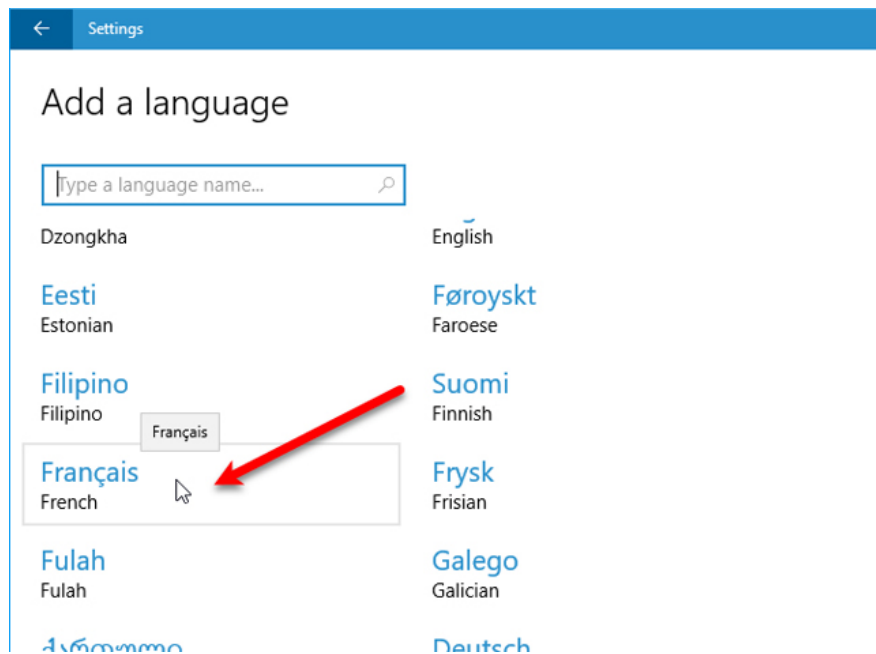

Add languages

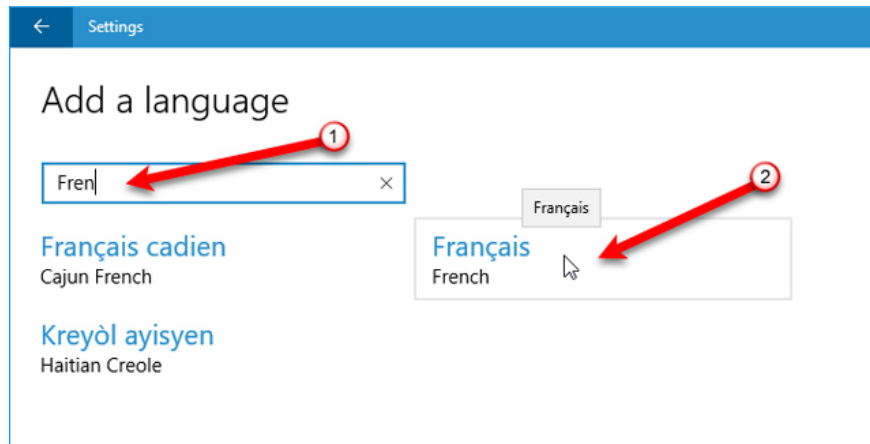

To add a language, click **Region & language** on the left side of the **Time & language** screen and then click **Add a language** on the right.

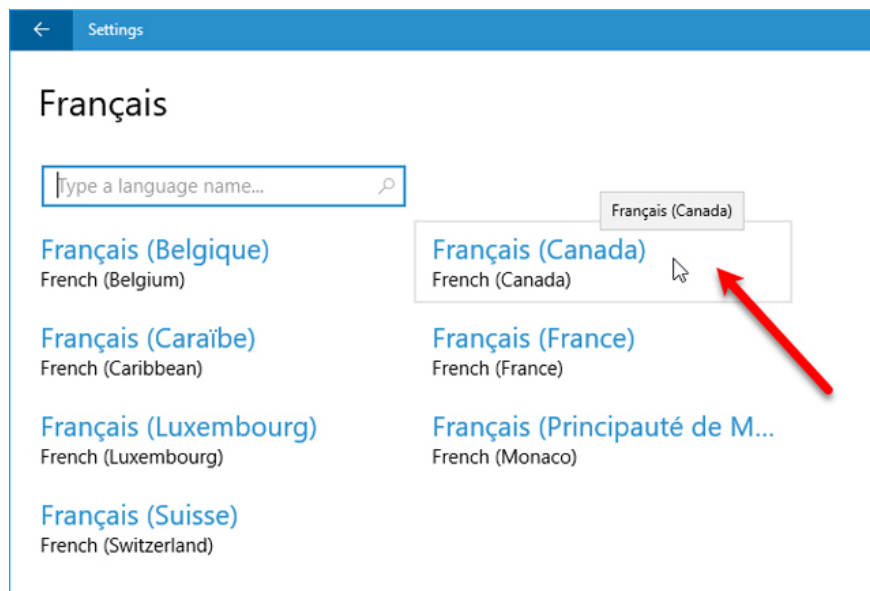

A long list of available languages ??will appear on the **Add a language** screen, find and select the language you want to change.

Users can also search for specific languages ??using the search box on the same window. Enter the language name and then select the language you want to change in the results list.

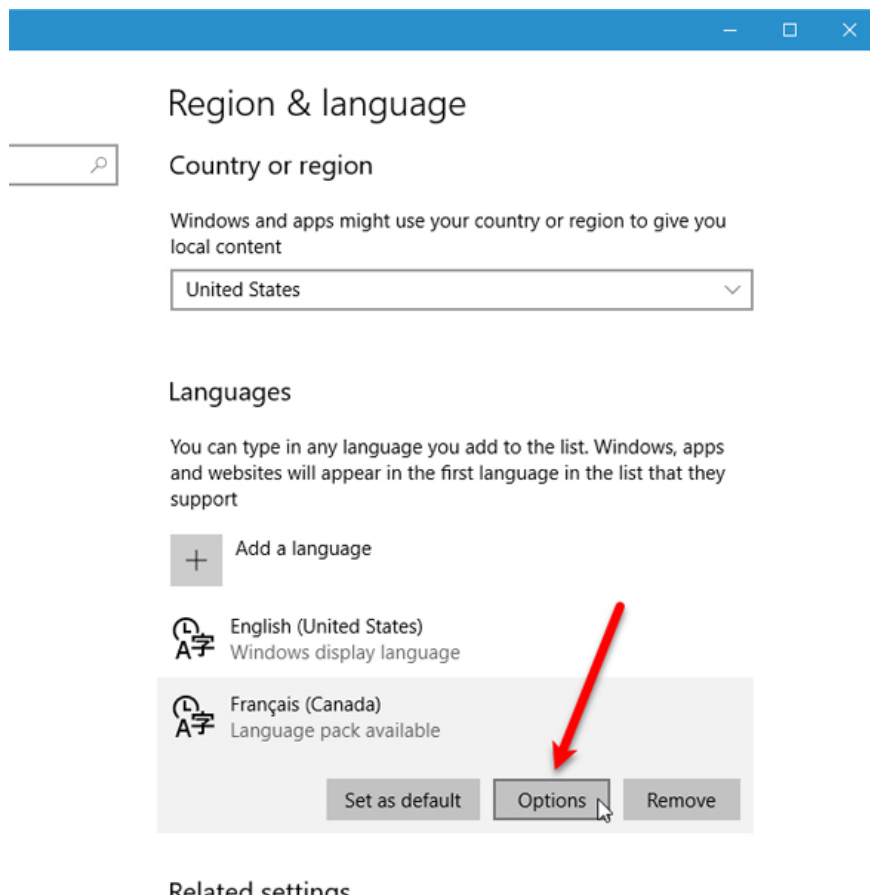

Some languages are used in many countries but change in another country, so a language will have multiple versions.

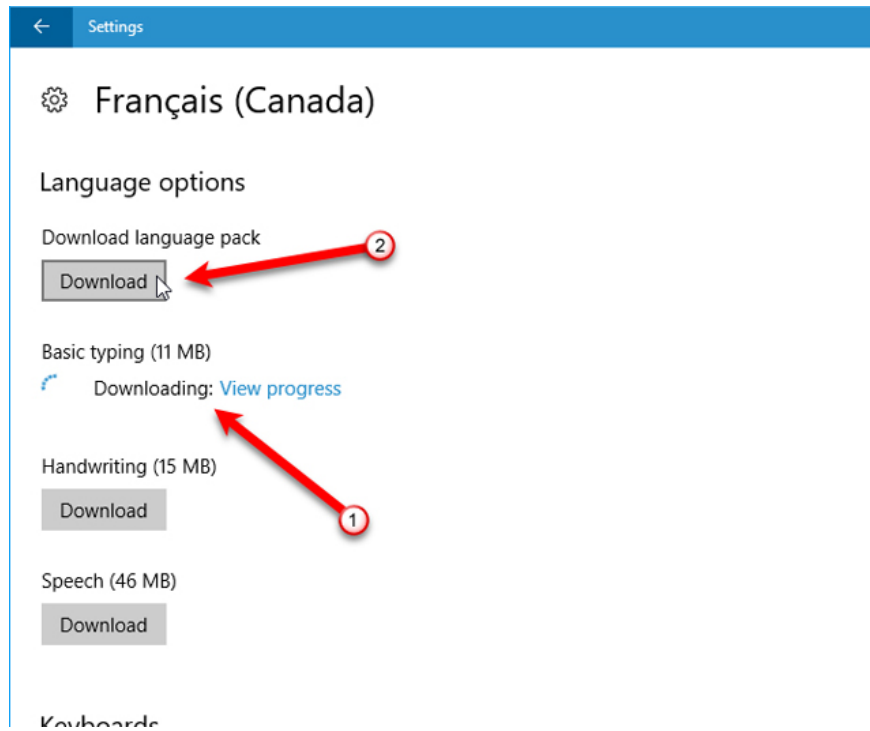

Download languages and other options

When selecting a language, it will be added to the **Region & language's Languages list**. If you want to download a language pack for the newly added language, you will see **Language pack available** under the language name. To download a language pack, click on the language and then click **Options**.

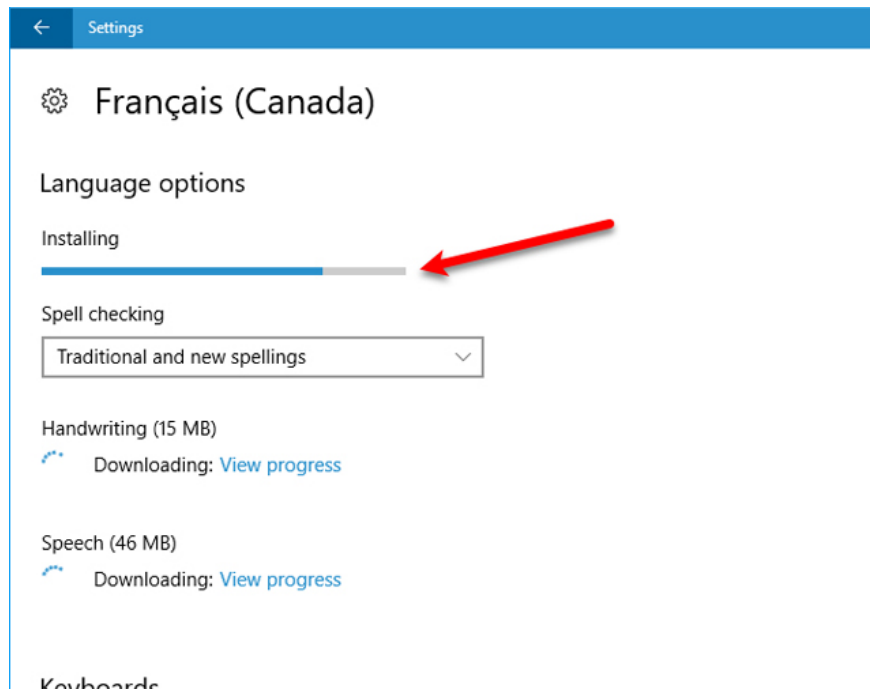

The first time you access these options, users will find Search **Update Windows for language features** in **Language options** . When you are done, the options of **Basic typing** , **Handwriting** and **Speech** will appear **Download** button below, click this button to download.

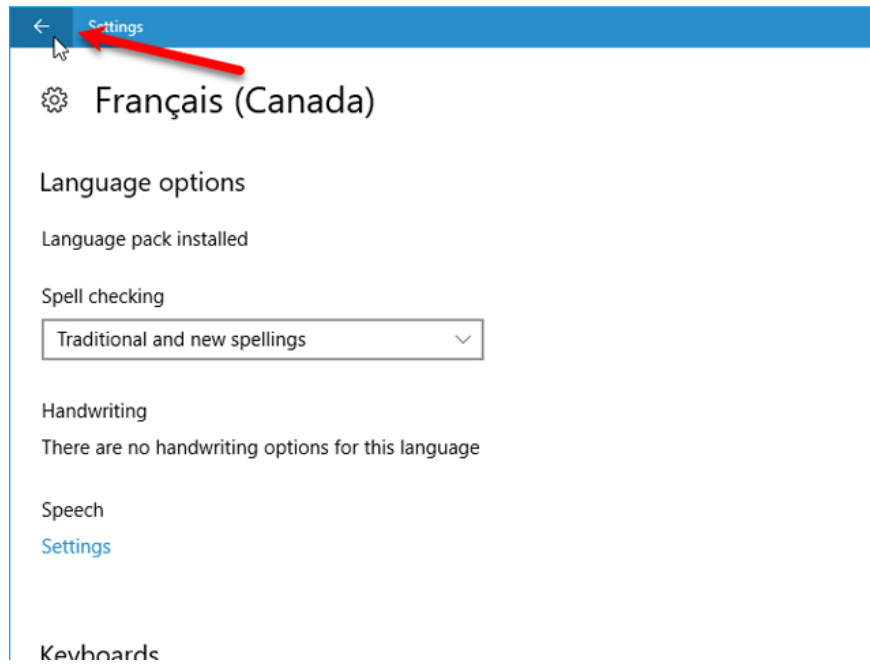

If you find a language pack in Windows Update, the **Download** button will appear under **Download language pack** , click this button to download and install the language pack because you will not be able to use the language without installing a language pack.

After downloading **Basic typing** , you will see the **Spell checking** drop-down list with the following options: **Traditional and new spellings** , **Traditional spelling** and **New spelling** , select the option you want to use.

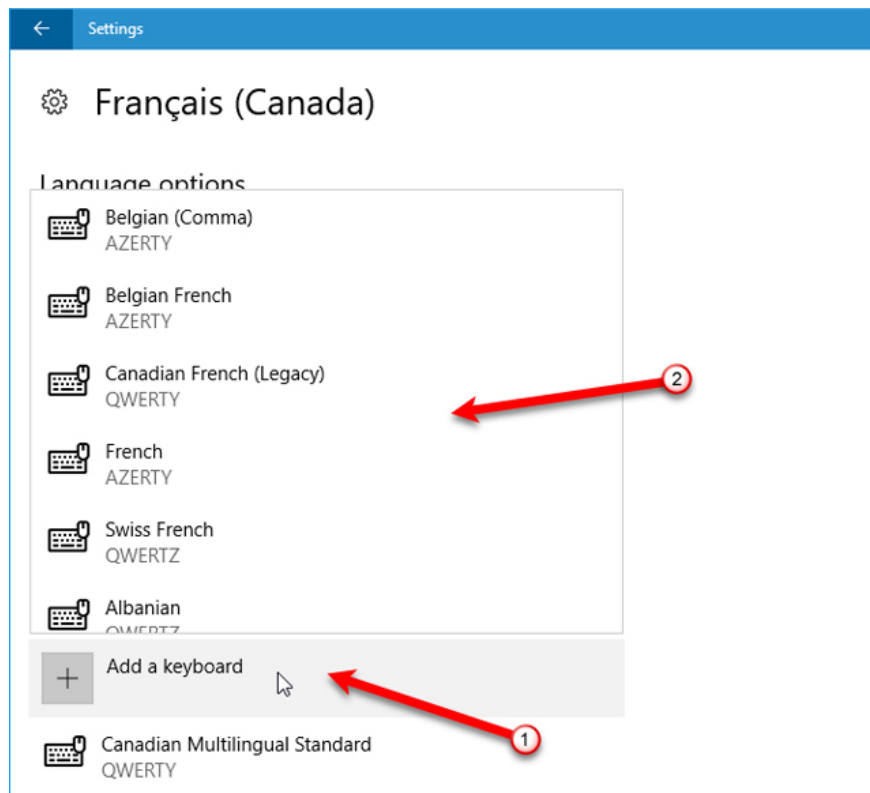

The **Language pack installed message** will appear when the language pack is complete installation. With some languages ??there will be no **Handwriting** and **Speech options** . If so, click **Settings** to set options. Then, click the left arrow in the upper left corner of the window to return to the **Region & language** screen.

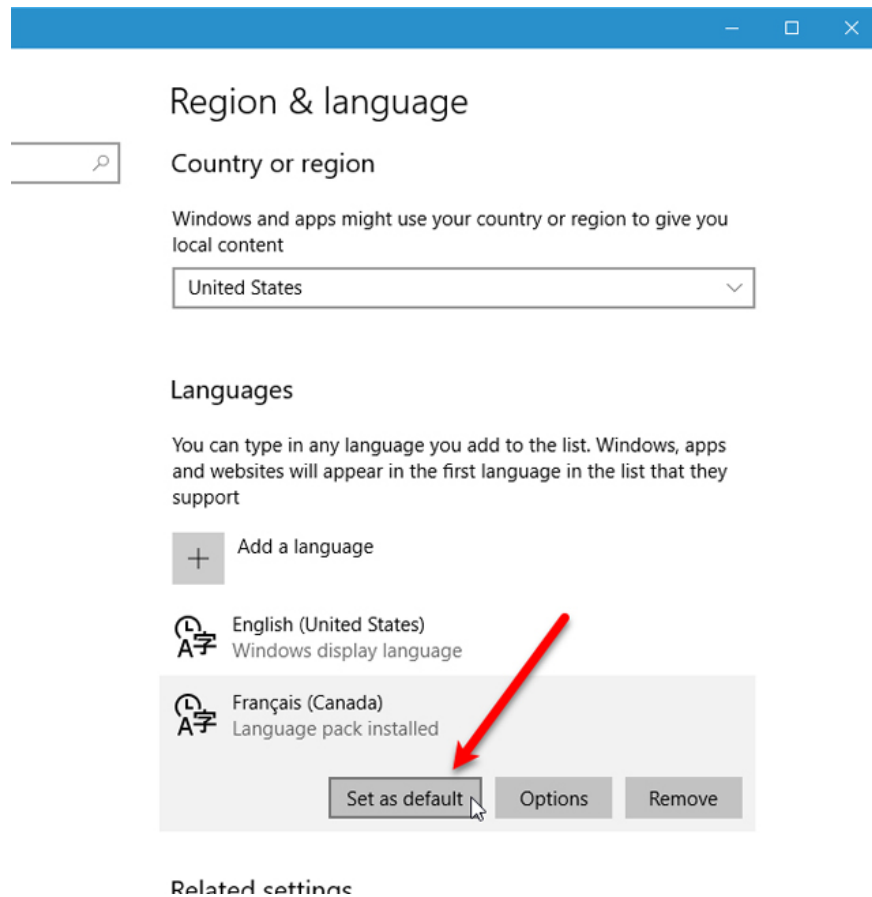

Add keyboard language

The keyboard language will be set by default according to the selected language. If you want to add another keyboard, click **Add a keyboard** and select in the pop-up list.

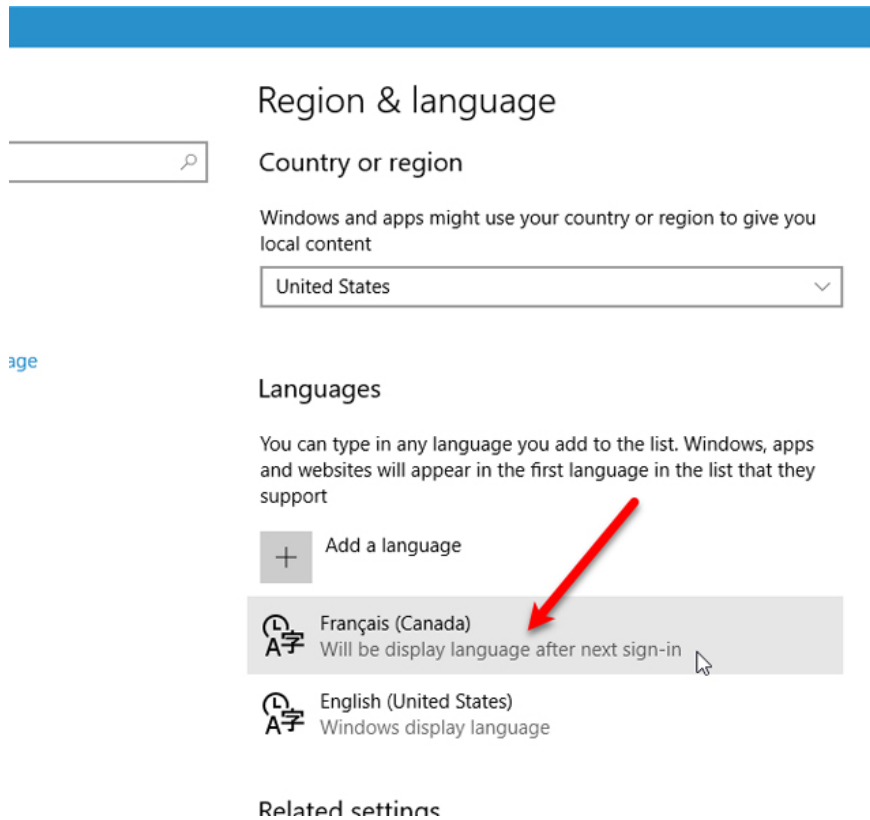

Set the default language

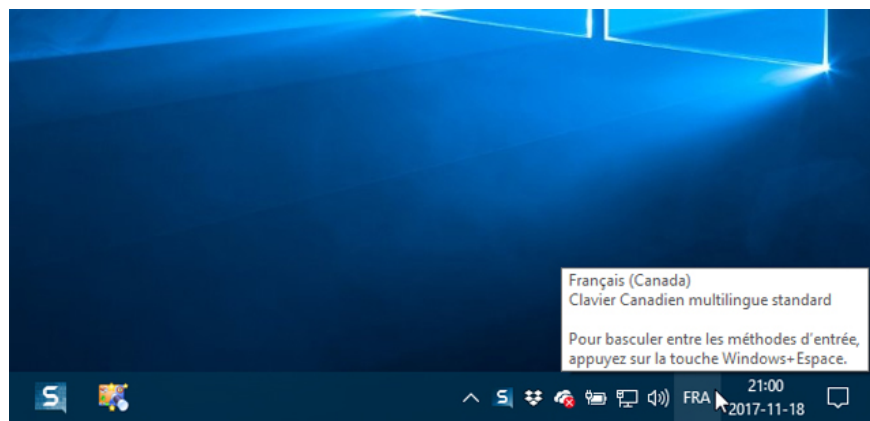

To set the new language as the default language, click on the language on the **Region & language** screen and click **Set as default** , then log out and log in to use the new language in the current user account. in.

Now, the language you choose to be listed first with this language notification will be the language displayed after the next login.

If more than one language is listed on the **Region & language** screen, the default language will appear on the right side of the toolbar next to **Date and time** . When hovering over the language indicator, you will see a message appear in that language.

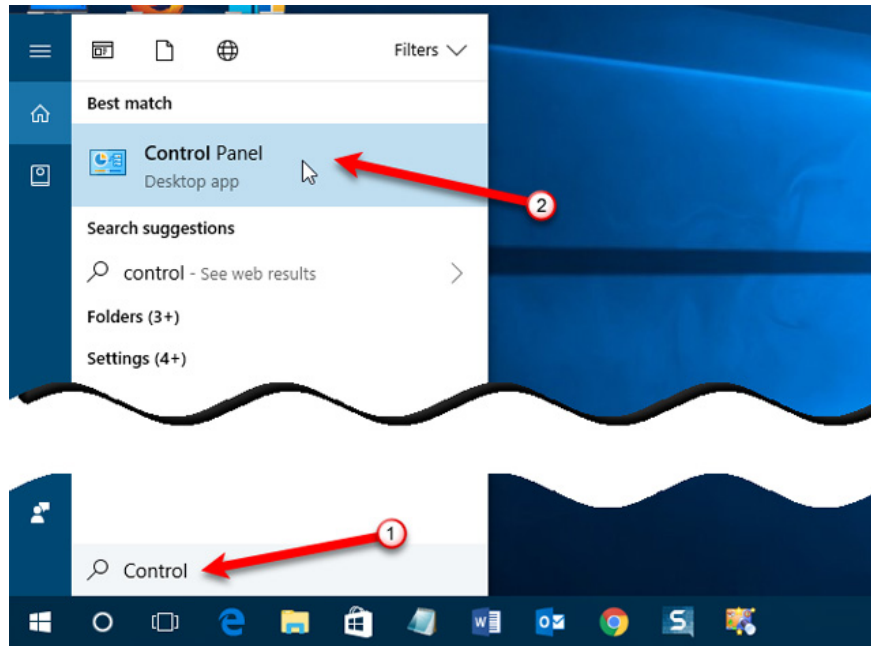

Set the language for the entire system

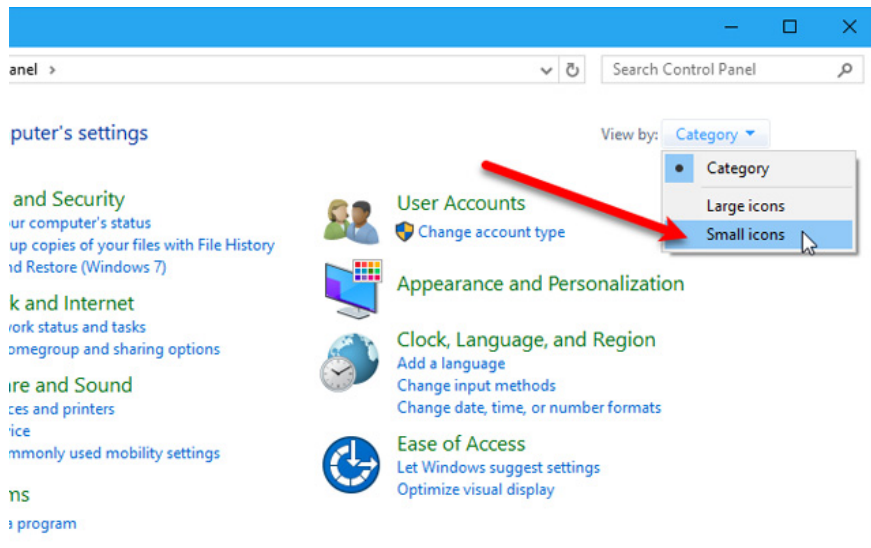

How to change the above language only applies to the current user account, the welcome screen and the user accounts created later. Although there is no longer Control Panel in Windows 10, we still have a way to change the language for the entire system.

1. How to create a new User on Windows 10 using Computer Management and Control Panel

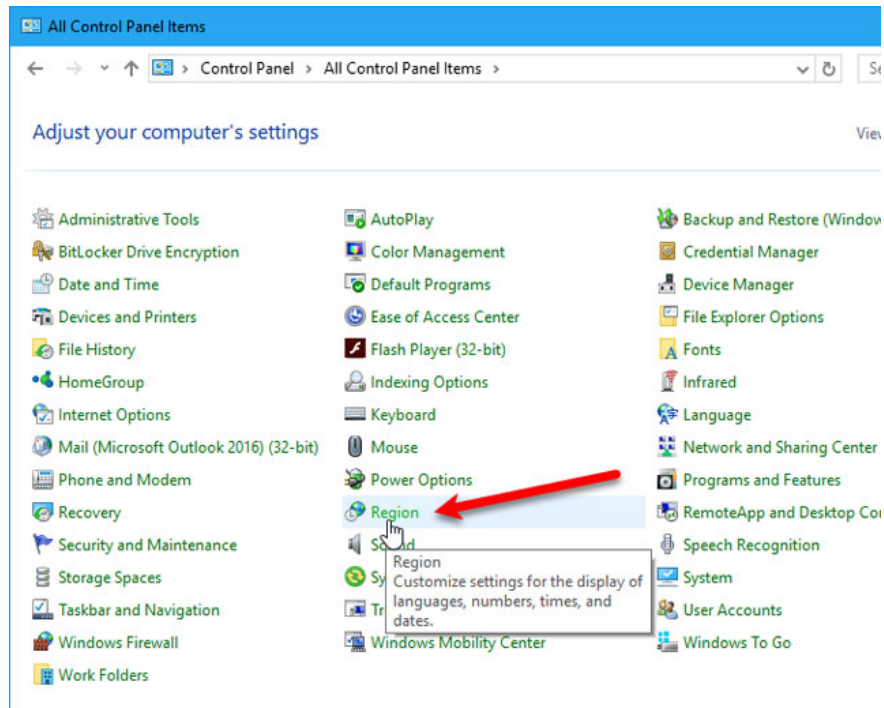

Type " **control** " in the search box on the Taskbar, then, click **Control Panel** under **Best match** .

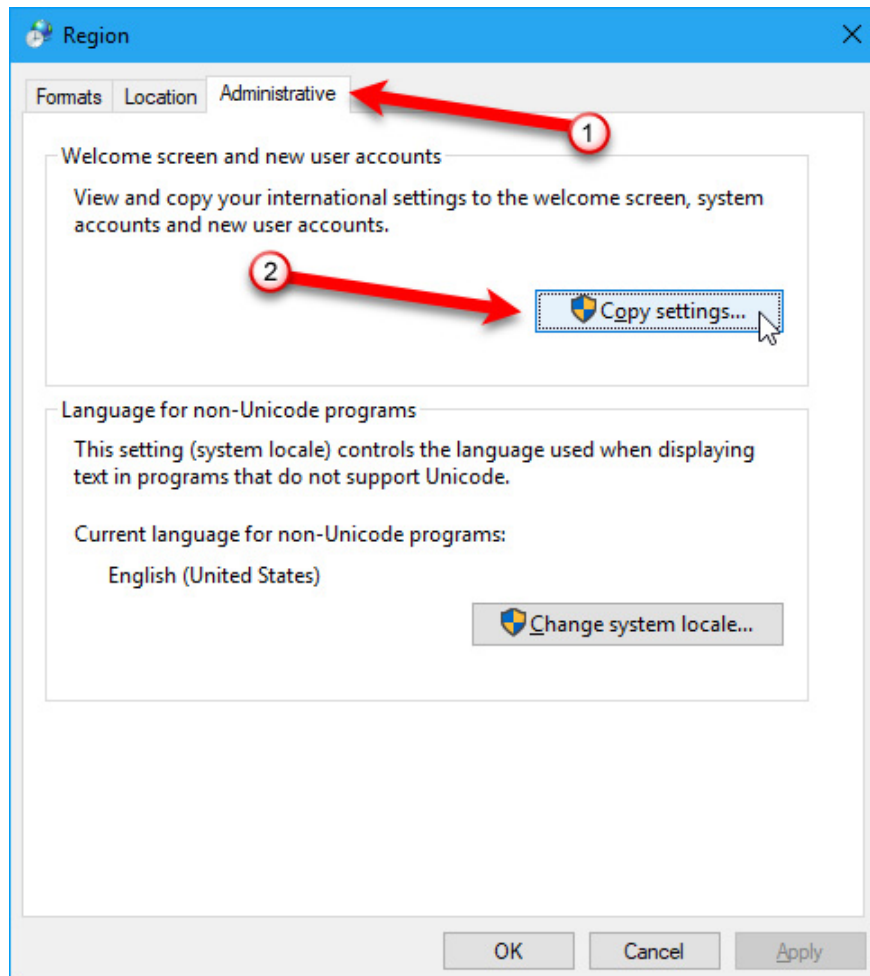

In the upper right corner of the **Control Panel** window, select **Large icons** or **Small icons** from the **View by** list.

On the **Adjust your computer's settings** screen , click **Region** .

On the **Region** dialog box, click the **Administrative** tab, then click **Copy settings** .

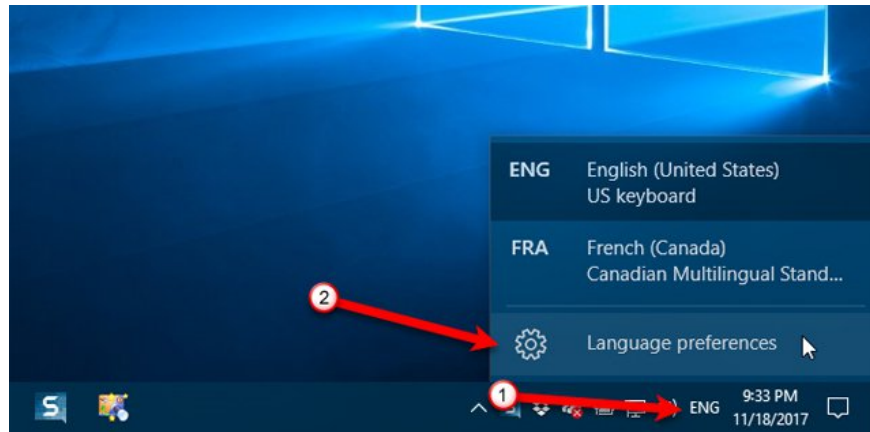

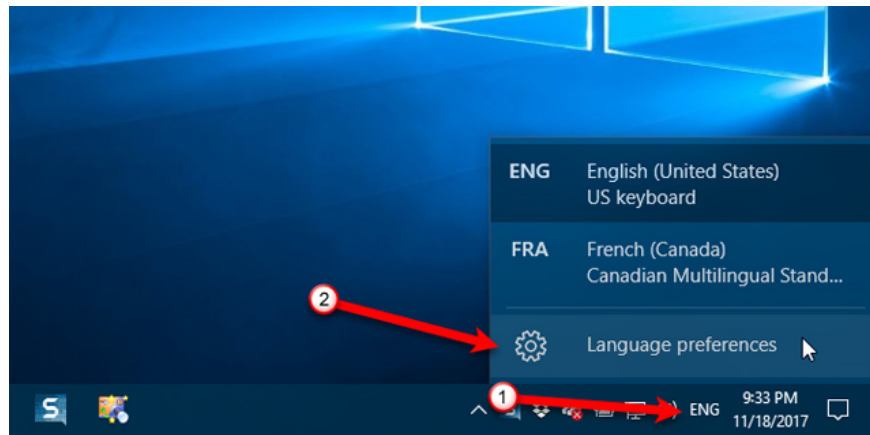

The **Welcome screen and new user accounts settings** dialog box appears, showing the current language for the current user, the **Welcome** screen and the new user account. Users cannot change each setting here, but can display the current display language as the system default language by selecting the **Welcome screen and system accounts** and **New user accounts** , then click **OK** and restart computer. This language will be set as the default for the entire system when the computer restarts.

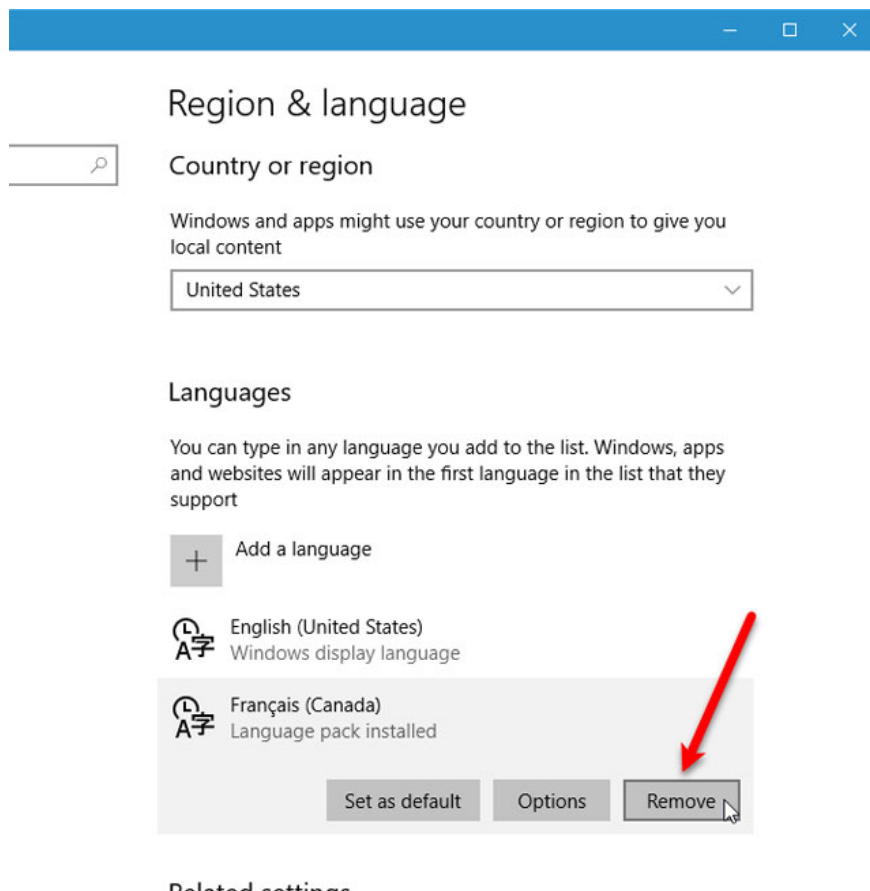

How to delete languages on Windows 10

Delete languages from Language Preferences

When there is more than one language on the computer, the easiest way to access the language setting is to click on the language indicator in the Taskbar and click on the **Language preferences** .

If the language you want to delete is the system's default language, select another language as the default language. You do not need to log out and log back in to apply changes. In case the language you want to delete is not the default language, click the language on the **Region & language** screen and then click **Remove** .

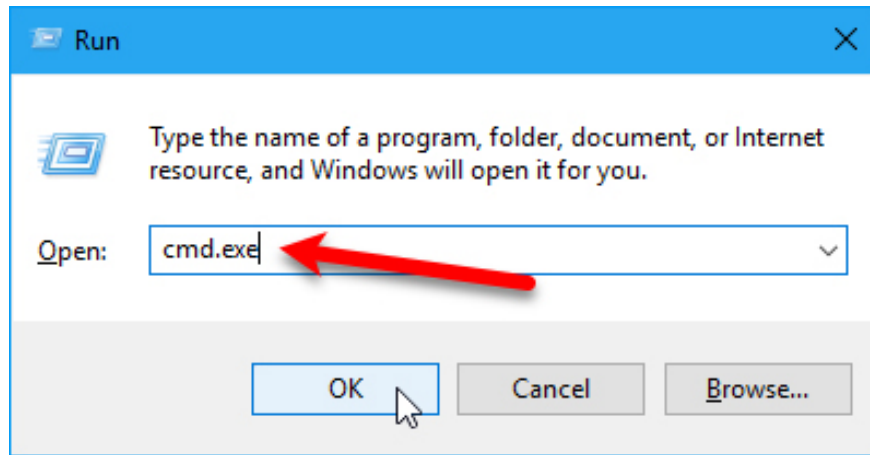

If there is only one language on the computer, the language indicator will be deleted from the Taskbar.

Remove the language list

If you no longer intend to use that language, you can delete it. Note, reinstalling the language pack has a lot of problems after uninstalling them, so users need to consider before uninstalling the installation package.

To delete a language pack, press the **Windows + R** key to open the **Run** dialog box, type " **cmd.exe** " into the **Open** box and click **OK** .

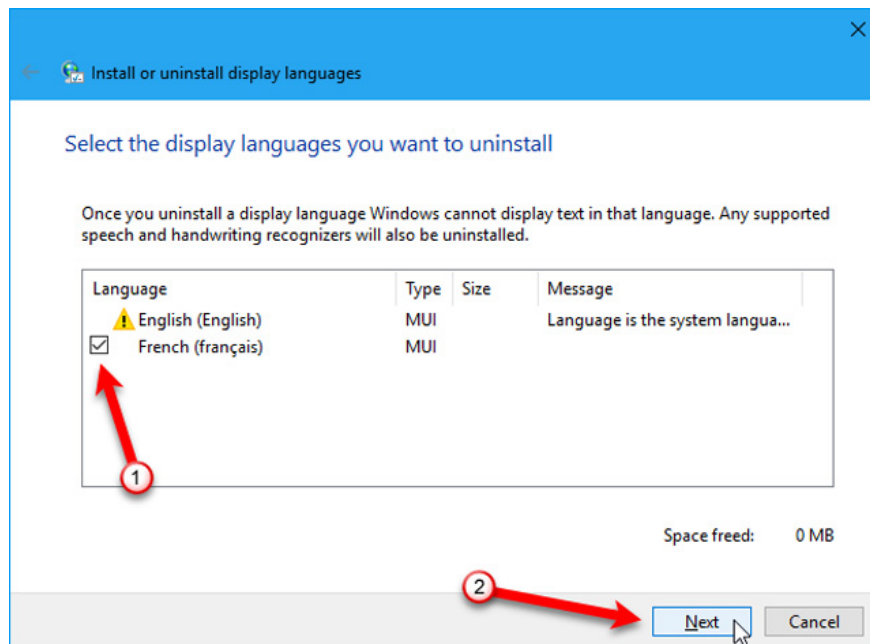

At the prompt in the Command Prompt, type the following command and press **Enter** :

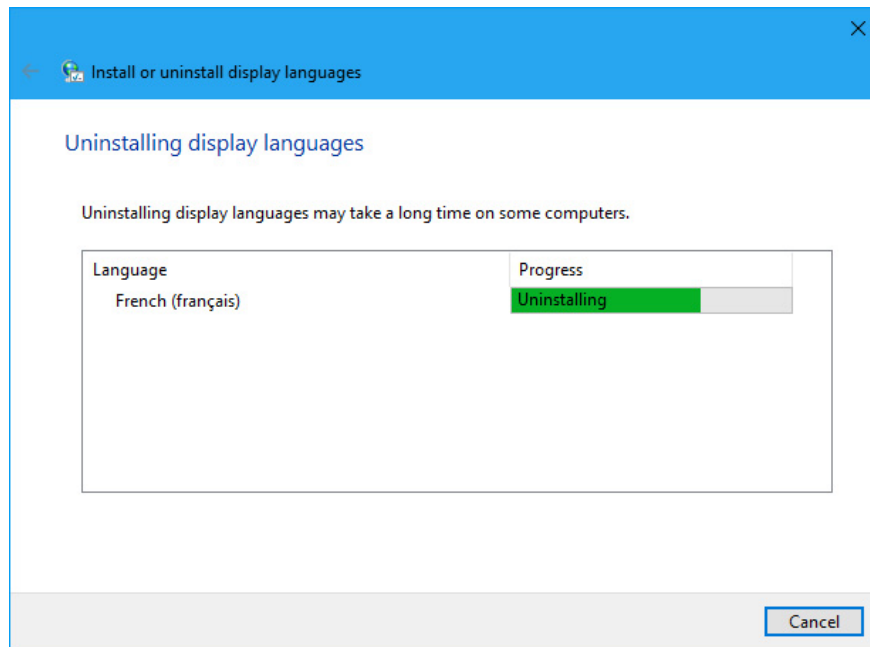

Lpksetup /u

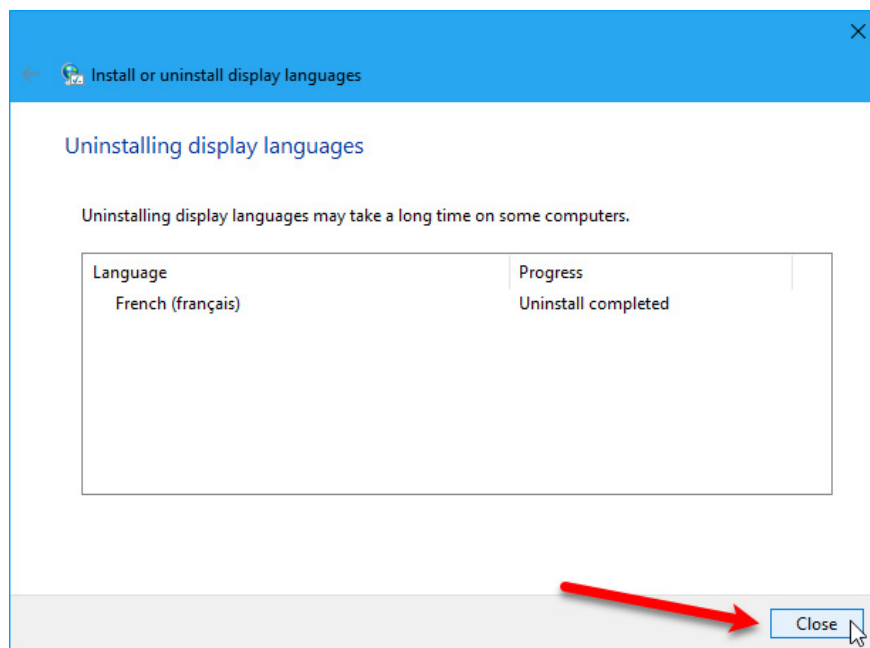

After entering the command, the **Install or uninstall display languages** dialog box will appear, tick the language you want to uninstall and click **Next** .

The uninstall process is displayed.

To close the Command Prompt window, type " exit " at the prompt or click the X in the upper right corner.

Restart the computer to complete the uninstall process.

I wish you all success
