

How to change the logo and OEM name in Windows 10/8/7

If you build your own PC, you can add your own OME name and logo with just a few clicks. Even when using an OEM PC, you can still change the OEM information to meet your unique needs.

If you purchased a computer or laptop from a PC manufacturer such as Dell, Sony, HP, etc., you will see these brands' logos, contact information, model numbers, URLs, etc. system.

Typically, these PC manufacturers are called OEMs. PC manufacturers add OEM information automatically or manually to each PC they assemble. To view OEM information, search for **System** in the Start menu and open it. Or, right-click **This PC** or **My Computer** and select **Properties**. You can also use the keyboard shortcut Win+Pause.

If you build your own PC, obviously you won't see all this OEM information. This means you can add your own OME name and logo with just a few clicks. Even when using an OEM PC, you can still change the OEM information to meet your unique needs. For example, you can replace the default OEM logo with your own picture or company logo, replace the OEM name with your own name, etc. Here's how to change OEM information in Windows 10.

Note : The same methods work in Windows 7 and 8.1.

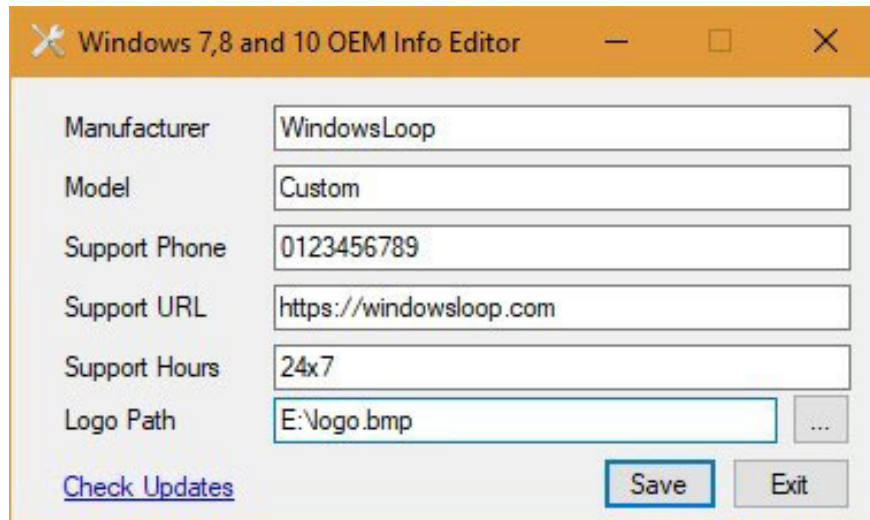

Change name and OEM logo

There are two ways to change OEM information in Windows 10. The first method is to use a free application. The second method is to change or create some registry keys. Make it the way you feel comfortable.

Use the free application to change OEM information

You can easily add or change OEM names and logos with a free portable application called **OEM Info Editor** .

1. Download the OEM Info Editor application and run it.
2. Now, fill out all the fields. To add a logo, click the browse button (three horizontal dots) next to the **Logo Path** field and select the logo. Logo should be in BMP format with size 120 x 120. You can convert photos or logo to BMP format with one of these web tools.
3. Once done, click the **Save** button .

Click the Save button

From now on, you will see your own custom information and logo in the **System Information** window .

Change the OEM name and logo from the Windows Registry

If, for some reason you don't want to use a third-party application, you can do the same thing by editing the Registry. All you have to do is create some new values ??or edit existing values. Before making any changes, back up the registry to stay safe.

1. Press Win+ R, type "**regedit**" and click Enter to open Windows Registry Editor.
2. Navigate to the location below to view OEM information. Windows 10 users can simply copy and paste the link below into the address bar, then press Enter.

HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\OEMInformation

3. If you cannot view the OEM information, you need to create a range of values. Right-click on an empty space in the right panel and select **New> String Value** to create the string value. You need to do it again 5 more times for all required values.

Name the new values ??as below.

1. Logo
2. Manufacturer
3. Model
4. SupportURL
5. SupportHours
6. SupportPhone

4. Now, double-click each value and enter the appropriate information in the **Value Data** field . For example, enter your name in the **Manufacturer** value , the logo file path in the **Logo** value , the website or social network URL in the **Support URL** value , etc.

Note : Logo must be in BMP format with size 120 x 120.

When done, close the Windows Registry and reboot the system. From now on, you will see custom OEM information in the **System** window .
