

How to change the tail image with Paint

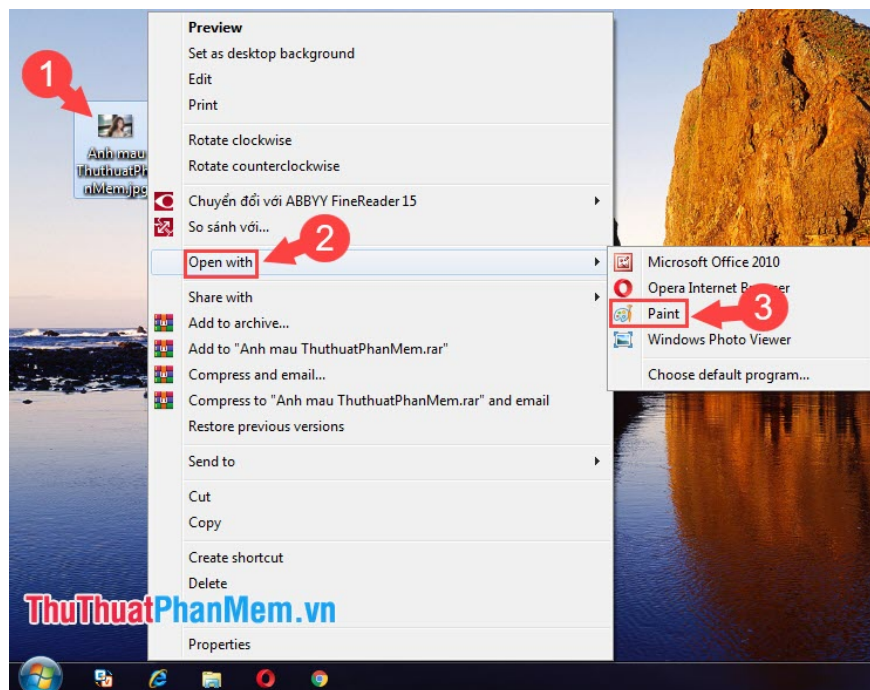

Instead of using the professional image converter software, we can take advantage of basic image editing software on the computer - Paint. In today's tutorial, TipsMake.com helps you read how to quickly and easily convert images with Paint tool.

Instead of using the professional image converter software, we can take advantage of basic image editing software on the computer - Paint. In today's tutorial, TipsMake.com helps you read how to quickly and easily convert images with Paint tool.

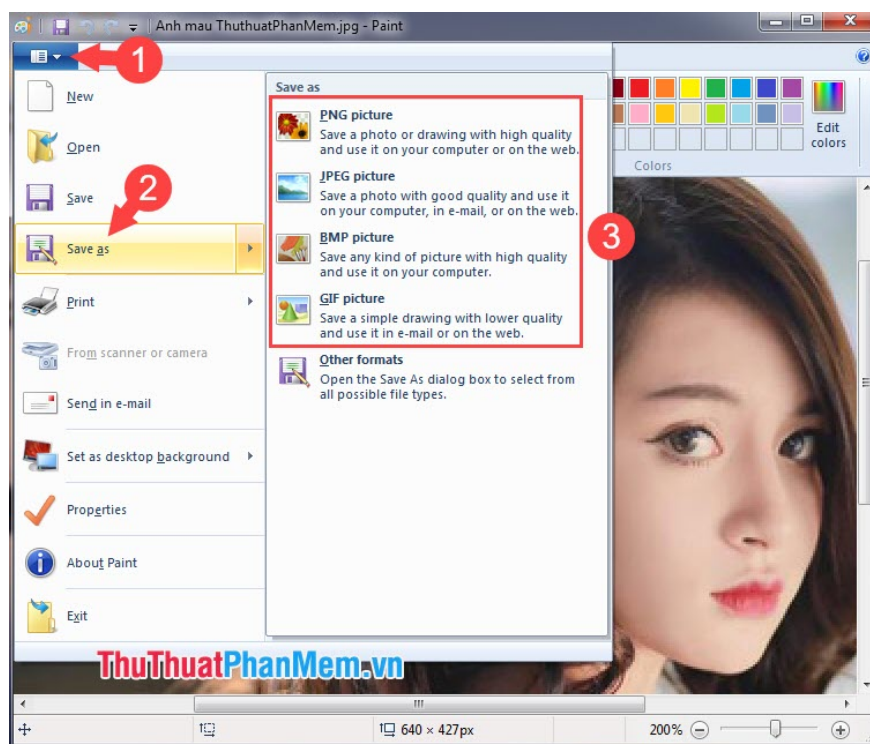

To convert the image extension with Paint, do the following:

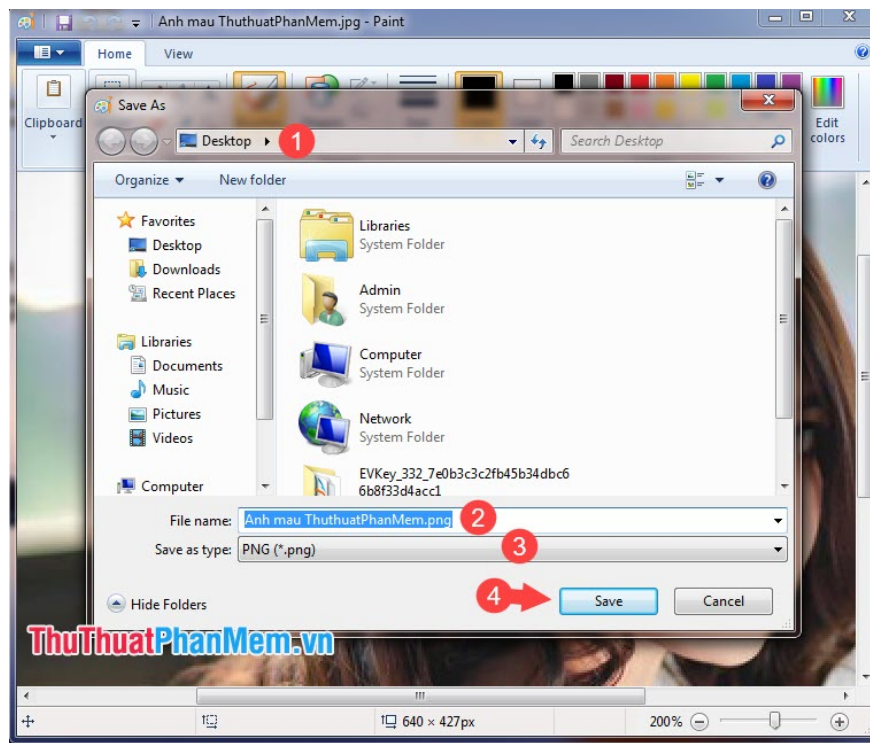

Step 1: Right-click the image to change (1) => select **Open with (2)** => **Paint (3)** .

Step 2: Click the **File** icon (1) => **Save as** (2) => Select the image file format to be changed (3) .

Step 3: Choose where to save the file (1) , name the file (2) , select the file format (3) (if necessary) and click **Save** (4) to save.

And after changing the image successfully, we have two image files with two different formats.

Through the instructions in the article, the reader can see that changing the image file extension with Paint software is quite easy, right? Please visit TipsMake.com regularly to update the latest computer tips and tricks! Have a nice day!
