

How to change time, date and month in Windows 10?

Many users are still not familiar with the operation on Windows 10, such as changing the system date and time on Win 10. Below, TipsMake.com will guide you to change the date and time on Windows 10 to the time you want. like fixing Windows 10 error showing wrong date and time.

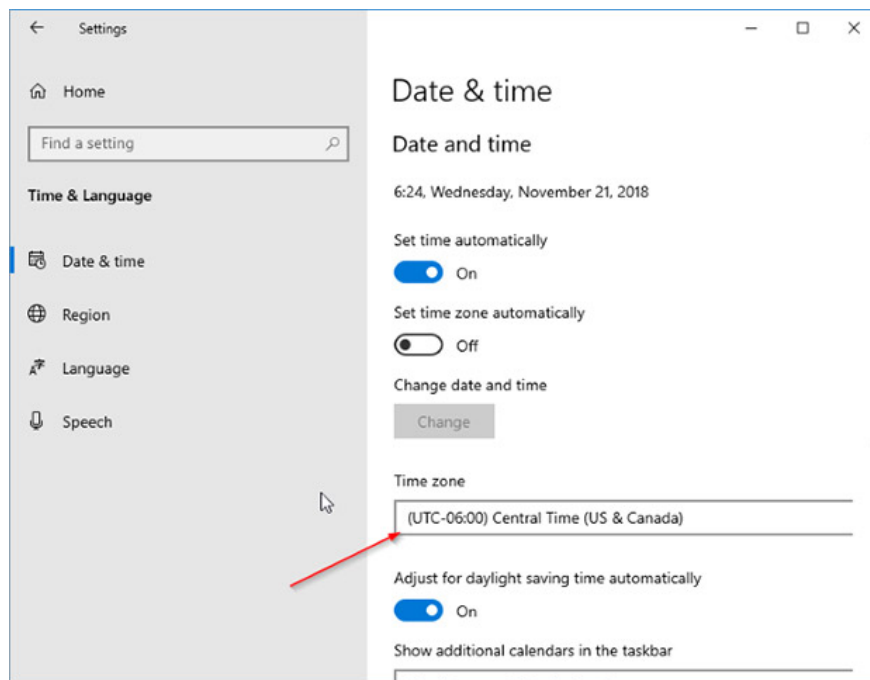

Windows 10 has just been sent by Microsoft for many expectations, as well as getting the user community's expectations for a new, safer, faster, smoother operating system . in short, 1 complete makeover compared to older Windows versions.

However, with the new interface, many users are still not familiar with the operation on Windows 10, such as changing the system date and time on Win 10. Below will guide you how to change the date and time on Windows 10 about the time you want and fix Windows 10 error showing wrong date and time.

Set the appropriate time zone on Windows 10

Step 1: You navigate to **Settings**> **Time & language**> **Date & time**.

Step 2: In the **Time zone** , select the correct time zone where you live (if you are in Vietnam, you change the **Time zone** section to **UTC + 7**).

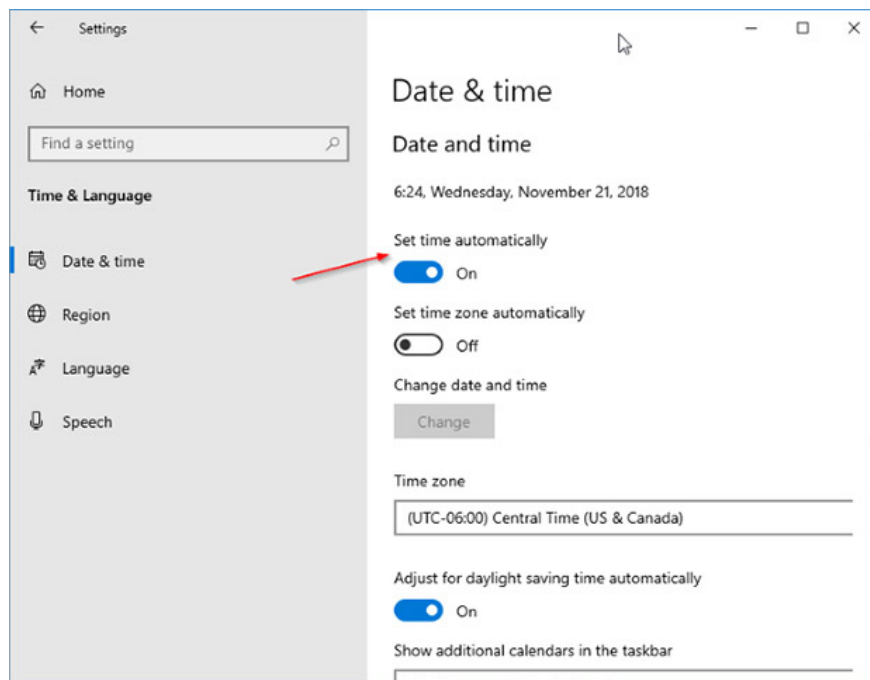

When you change the time zone, the system will automatically change the corresponding display time, no need to press **OK** or any other buttons. It's convenient, isn't it?

Turn on the auto-time feature

If your computer is currently connected to the internet, you can allow Windows 10 to set the time automatically. Here are the steps to proceed:

Step 1: Open the **Settings** application. Navigate to **Time & language > Date & time**.

Step 2: Turn off the **Set time automatically** option if this option is enabled. Then turn this option on again immediately.

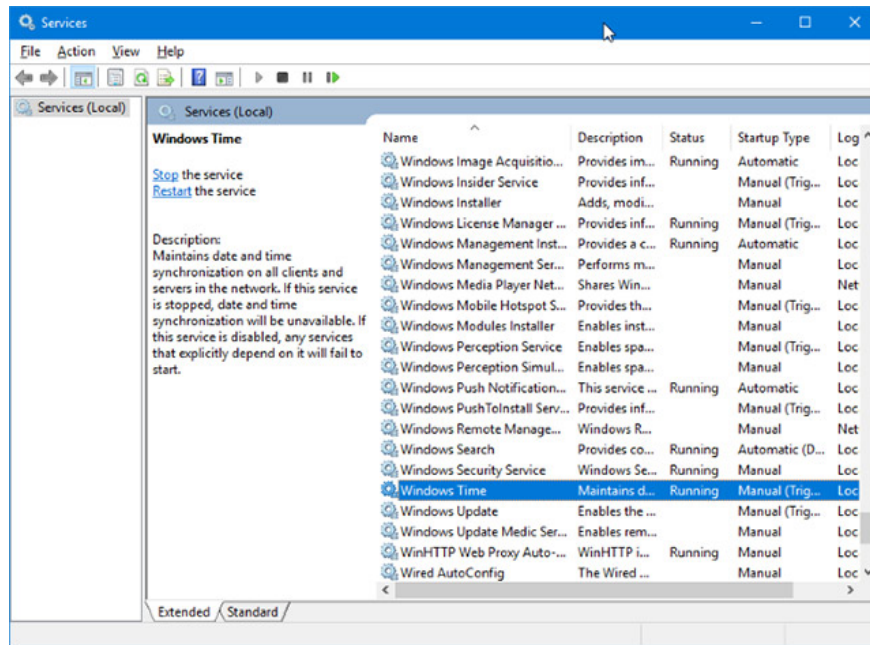

Check if the Windows Time service is running

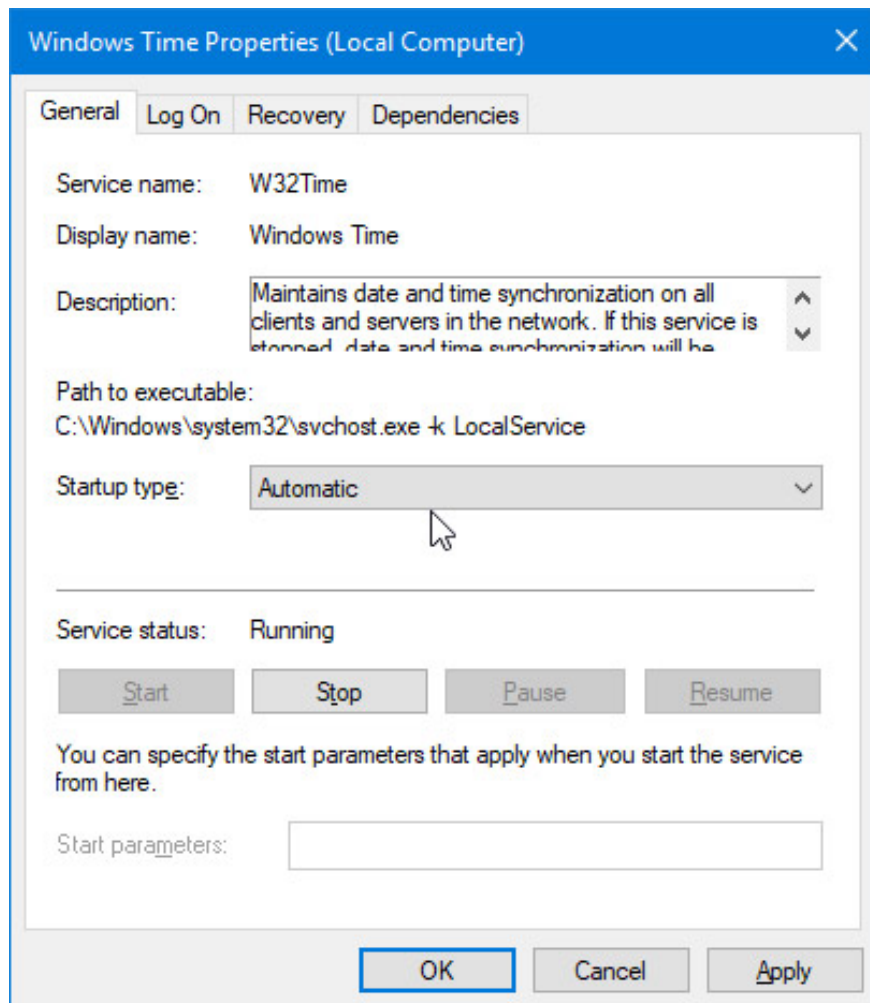

As you know, Windows 10 has a service running in the background called **Windows Time** to maintain the synchronization between the date and time. To check if this service is running, follow these steps:

Step 1: Open the **Run** search box, type keywords **services.msc** and then press **Enter** to open the **Services** window.

Step 2: In the **Services** window, find the **Windows Time** service and then double-click it to open the **Windows Time Properties** dialog box.

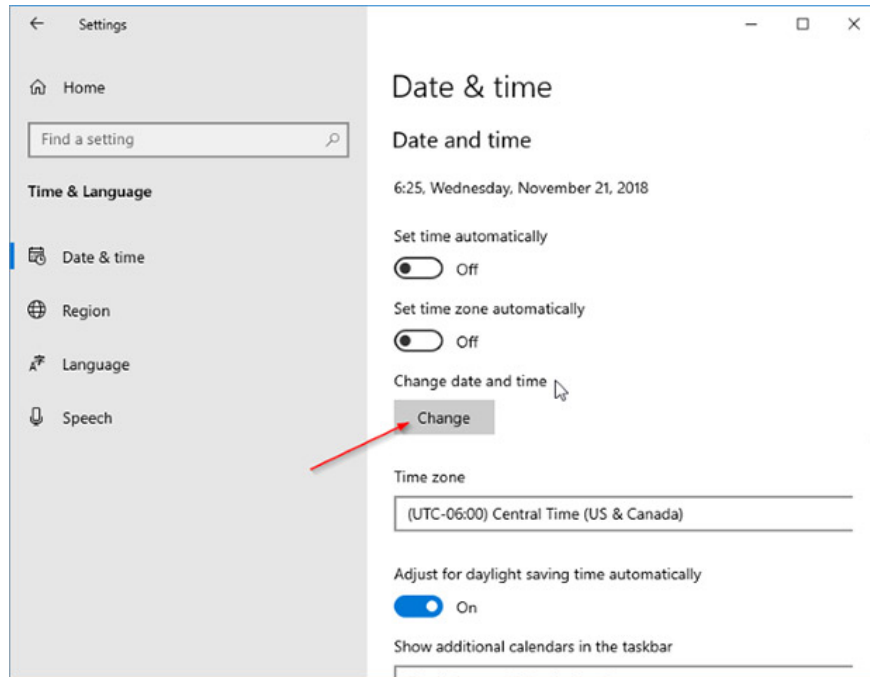

Step 3: Make sure the service's **startup type** is **automatic** and the **service status** is **running** . If the displayed **service status** is **stopped** , click on the **Start** button to restart the service.

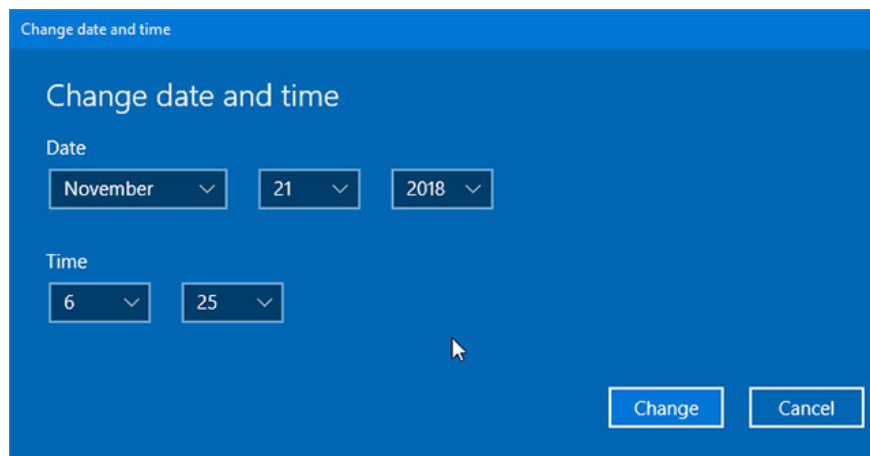

Set the date and time manually

Step 1: Go to **Settings**> **Time & language**> **Date & time**.

Step 2: Turn off the option to set the automatic time (**Set time automatically**). In the **Change date and time section** , click the **Change** button directly below.

Step 3: Choose the right date and time. Then click the **Change** button to proceed to set a new date and time.

Check the CMOS battery

CMOS battery (CMOS battery) is the component responsible for maintaining the correct date and time on your computer even when the computer is turned off. If the CMOS battery is exhausted, your computer cannot maintain the correct date and time.

In this case, please contact your PC manufacturer to know how to replace the CMOS battery. However, replacing a CMOS battery on a desktop computer is also very easy and you can do it yourself.
