

# How to check and update the version of Android operating system in use

How to update Android, update Android version, update security patch for Android or update Android operating system will be done through the instructions below, please consult.

The Android operating system is an open operating system that allows application developers to freely "create" applications for users. However, many of them are only compatible with certain operating system versions. But how do I know what operating system I am using is not everyone can see. Today, TipsMake.com will guide you how to view the current operating system version in your device. Please consult.

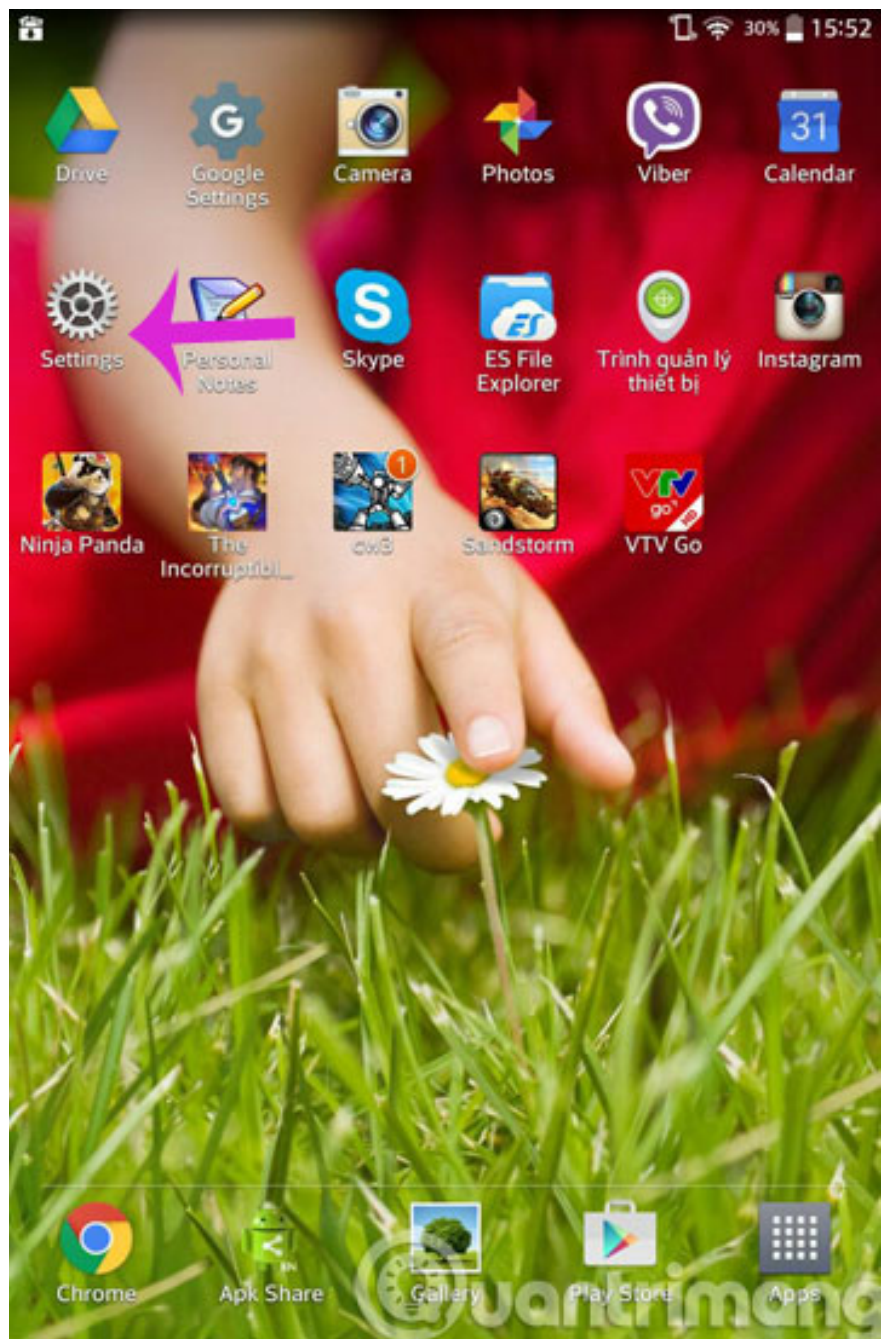

**Note** : The image illustrated in this article is done on LG tablets, so the order of arranging menus and buttons on other devices may not be the same but basically must go to **Settings** to view the information. device.

You can also upgrade your device to Android Nougat 7.0 version. The way to upgrade as well as the devices in the list can upgrade the operating system to Android Nougat 7.0 in the article Frequency of device list to Android 7.0 Nougat, how to download and how to install.

## 1. How to check Android operating system:

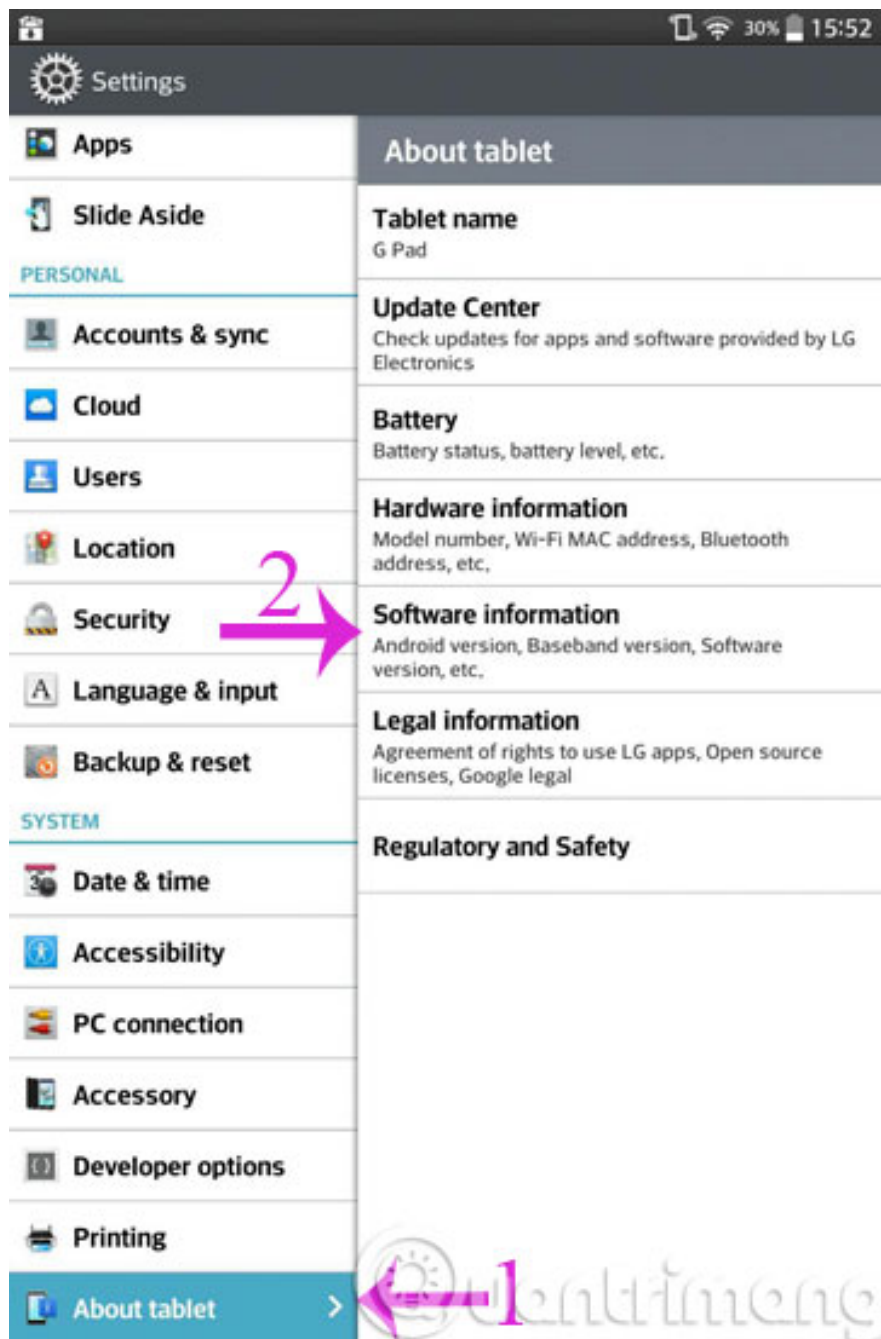

### Step 1:

From the main interface of the device, click **Settings** .

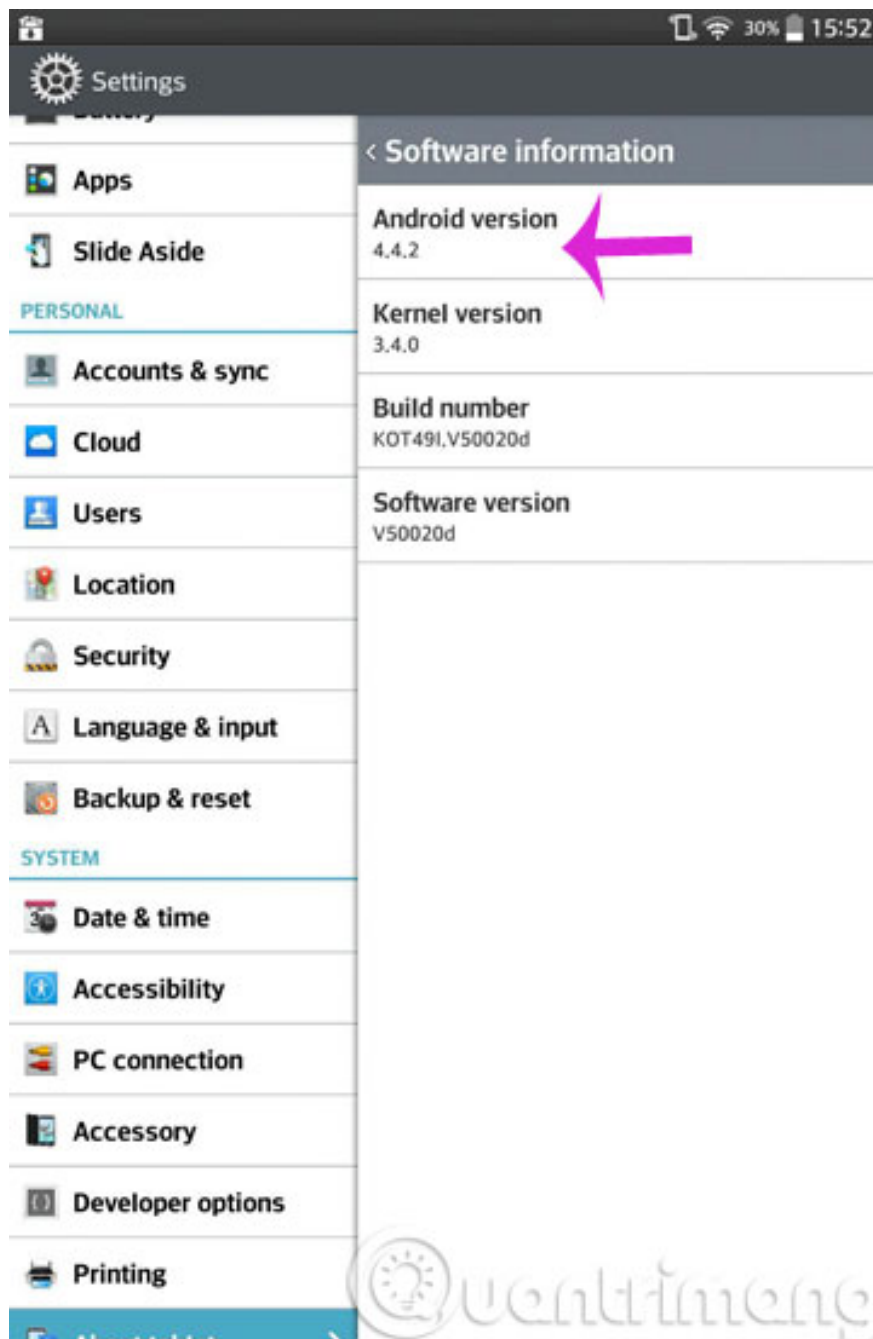

## Step 2:

In the Settings interface, select **About Tablet**> **Software Information** .

### Step 3:

Please see the current operating system version in the Android version line (here is 4.4.2)

## 2. How to update Android operating system:

Updating Android to the latest operating system will make it much more stable than the old operating system. After upgrading the operating system, the device will limit a few frequent errors. In particular, we can install more applications that require higher OS Android than the old version.

**Note** , your battery has 50% left to prevent the device from collapsing when upgrading midway. Do not turn off the computer while upgrading Andorid to the latest version.

### Step 1:

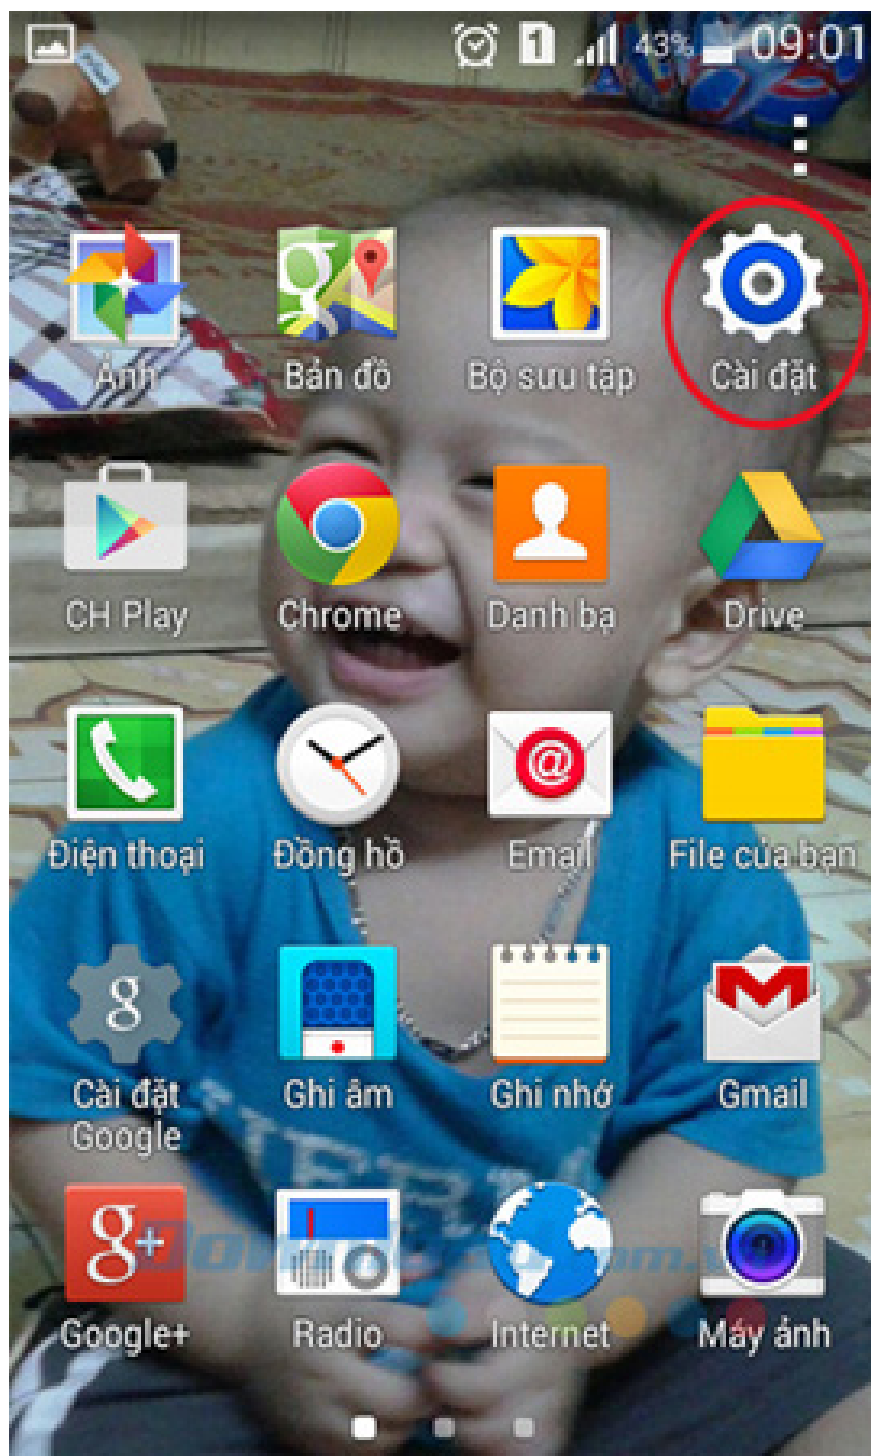

First, it is necessary to check the operating system version according to the instructions in section 1 above.

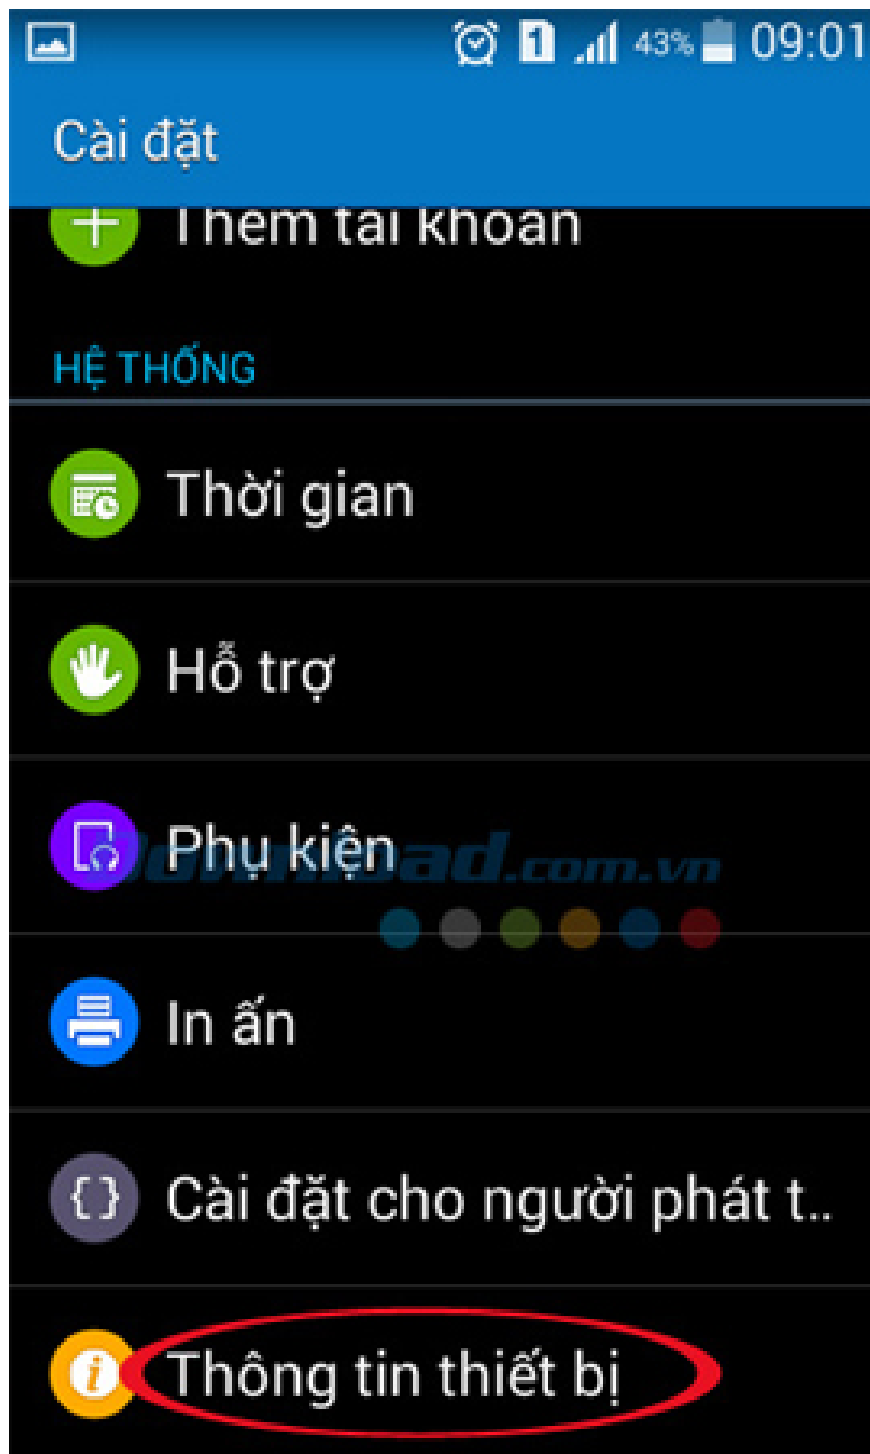

## **Step 2:**

The upgrade version will not lose your data. However, to avoid the best risk you should still back up important data in the device.

## **Step 3:**

At the main interface, click **Settings** and then select **Device information** .

#### Step 4:

The Device Information interface appears, click **the Software update section** to proceed to upgrade the smartphone version. In this section there will be 2 sections to choose from. If you want to automatically check for updates, check the **Automatic update section** . If you want to update only when there is a Wi-Fi connection, select **Wi-Fi only** . Then click **Update** to check.
