

# How to check how much mobile data FaceTime uses

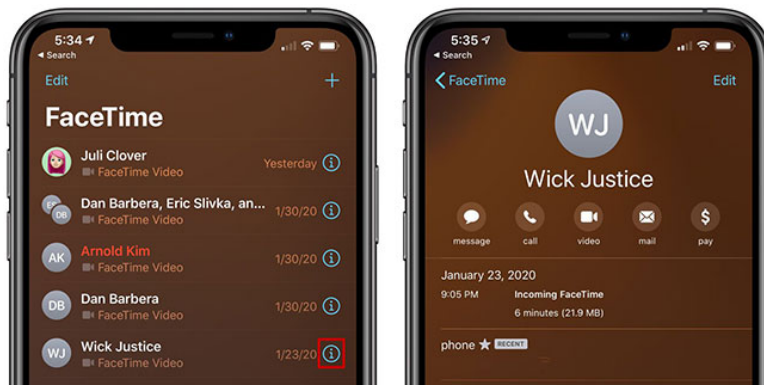

FaceTime, Apple's audio and video chat application, can use a fair amount of data. On average, FaceTime videos use between 70 and 80MB every 20 minutes, but this may vary based on connection speed and other factors.

FaceTime, Apple's audio and video chat application, can use a fair amount of data. That may not matter if you are using WiFi or have unlimited mobile data plans. But if you have to monitor data usage, you might want to check how much data is being used when you make a call.

On average, FaceTime videos use between 70 and 80MB every 20 minutes, but this may vary based on connection speed and other factors.

## How to check data usage right in the FaceTime application

The amount of data used for each FaceTime call can be viewed right within the FaceTime app by following the instructions below.

How to check data usage right in the FaceTime application

1. Open the **FaceTime** application .
2. In the list of recent calls, tap "i" next to the name of the person.

At the top of the contact details, the date the call was taken, the time and data used will be listed.

## How to check data using FaceTime in the Phone app

The FaceTime app has a limited number of recent calls, while the Phone app keeps information for a longer period.

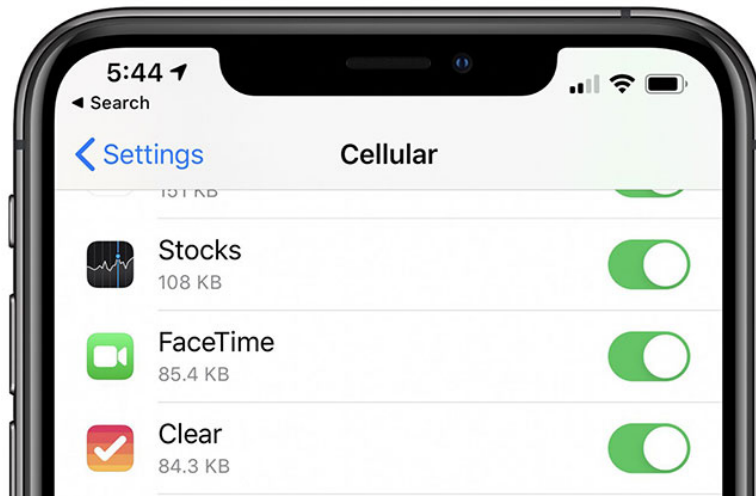

### How to check data using FaceTime in the Phone app

1. Open the **Phone** app .
2. In the list of calls, look for a call that says "**FaceTime Video**" or "**FaceTime Audio**" in the text section below the caller's name or number.
3. Click the "i" button next to the name or phone number.

At the top of the contact details, the date the call was taken, the time and data used will be listed.

### How to see the total data usage of FaceTime

You can also check your total FaceTime data usage over the current period, summarizing all FaceTime data since the last time the counter was reset.

How to see the total data usage of FaceTime

1. Open the **Settings** application .
2. Click **Cellular**.
3. Scroll down to **FaceTime**.

The counter can be reset manually and when installing a new version of iOS. To track weekly or monthly data usage, make sure to reset the counter regularly by scrolling to the bottom of the **Cellular** interface and then selecting **Reset Statistics**.
