How to use CyRadar Internet Security Check Tool

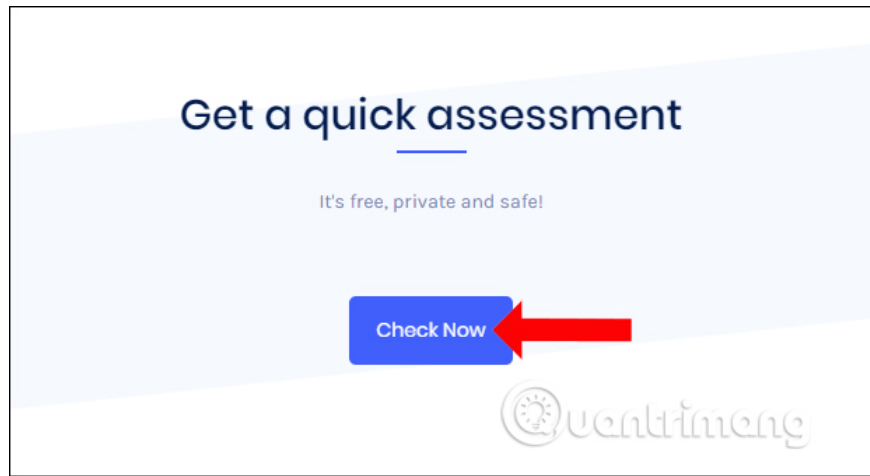

Step 1:

Users access the link below to access the homepage of CyRadar Internet Security Check Tool.

1. <https://cyradar.com/products/internet-shield/check/>

Step 2:

On the homepage, click **the Check Now button** to proceed with the scanning and checking process.

The checkout process will take place shortly thereafter. We will see there are three test topics: Malware Prevention, Web Protection and Web Filtering. The speed of testing will depend on the security programs you are using on your computer, the level of security complexity and computer network speed.

Step 3:

As a result, users will see a rating scale for the test, with the necessary notifications to increase the security of the computer. As in the computer network picture, it only reached 2/10, which means that the level of computer protection against network attacks is very low.

Below is a list of what security parts your computer is having. Thus, in addition to using the default Windows Defender security program on the computer, users need to use other security methods such as antivirus programs, malware blocking tools, etc.

CyRadar Internet Security Check Tool provides an objective and quick assessment of the ability to prevent malicious attacks and block phishing websites on your computer. With a result scale, users will know the status of the machine to provide ways to enhance computer security in a timely manner.
