

# How to check if your account password has been leaked?

If you're worried that a password you use to log in to the internet has been compromised, especially when there's a virus or malware out there, the websites mentioned in today's TipsMake article will help you.

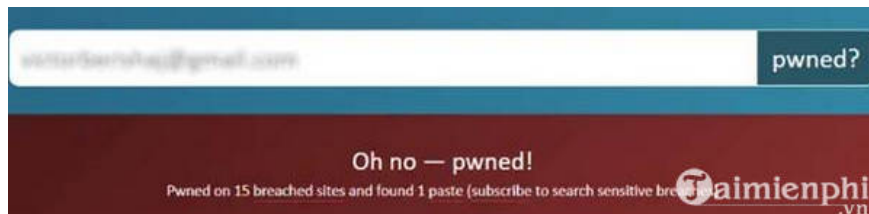

To check if your account password has been leaked, you only need a few simple steps on account password checking websites. For detailed information on each website, please refer to the article by **Taimienphi.vn** below!

How to check if your account password has been leaked?

## 1. Have I been Pwned

To check if your account password has been leaked, use the Have I Been Pwned tool [HERE](#) . Simply enter your email address and click **pwned?**

Once you complete this process, you will either receive a notification that your password is secure, or you will see that your password has been detected on several vulnerable websites.

Have I been Pwned will then show you a list of all the websites on which your password has been found.

**APOLLO** Apollo: In July 2018, the sales engagement startup Apollo left a database containing billions of data points publicly exposed without a password. The data was discovered by security researcher Vinny Troia who subsequently sent a subset of the data containing 126 million unique email addresses to Have I Been Pwned. The data left exposed by Apollo was used in their "revenue acceleration platform" and included personal information such as names and email addresses as well as professional information including places of employment, the roles people hold and where they're located. Apollo stressed that the exposed data did not include sensitive information such as passwords, social security numbers or financial data. The Apollo website has a contact form for those looking to get in touch with the organisation.

**Compromised data:** Email addresses, Employers, Geographic locations, Job titles, Names, Phone numbers, Salutations, Social media profiles

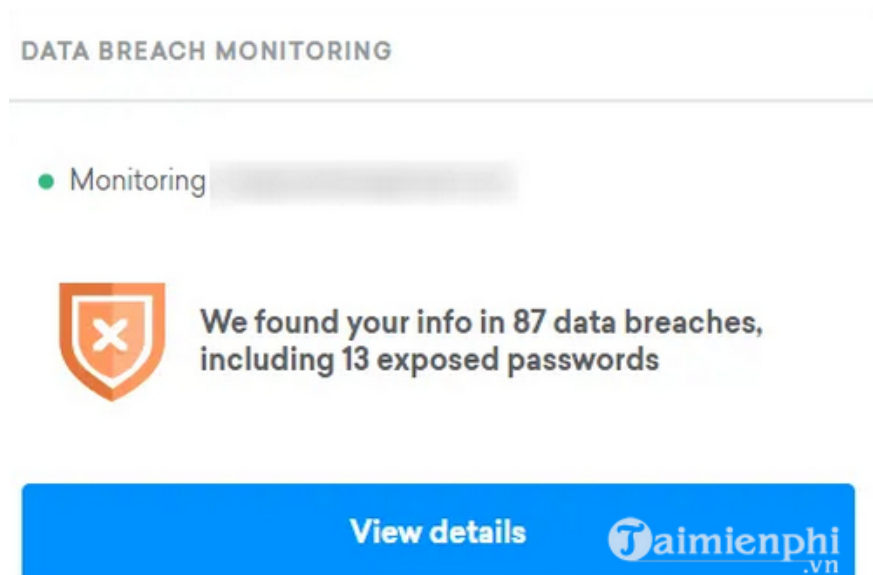

**bitly** Bitly: In May 2014, the link management company Bitly announced they'd suffered a data breach. The breach contained over 9.3 million unique email addresses, usernames and hashed passwords, most using SHA1 with a small number using bcrypt.

**Compromised data:** Email addresses, Passwords, Usernames

Not only that, this website also allows you to search for a password to see if it has ever appeared in a leaked website. To do this, go to the **Pwned Passwords** page on the Have I Been Pwned website.

## 2. Credit Karma

DATA BREACH MONITORING

● Monitoring

 We found your info in 87 data breaches, including 13 exposed passwords

[View details](#) Taimienphi.vn

To use Credit Karma, you need to log in to the website (<https://www.creditkarma.com>) HERE , then go to **Identity Monitoring** and click on **View details** below the **Data Breach Monitoring** table .

## 87 data breaches

Review the breach details to see what happened and what you should do about it now.

To check if your account password has been leaked, you must create and use a Credit Karma account. This account helps you track your passwords online.

### 3. *Dehashed*

DeHashed allows you to search not only by email but also by username, address, etc. Then, click the **Search** button to get the results.

When searching, DeHashing will display websites where your password has been leaked. However, you won't be able to see details about the website or your password unless you register and pay a fee. Even so, the results DeHashing provides are more than enough for you to protect your account.

DeHashing can help you find leaked passwords and save some of your passwords. Visit the website [HERE](#).

Above, TipsMake has introduced to readers how to check if your account password has been leaked. If you have any questions or need clarification, such as what password generator software is available that creates complex and random passwords, please leave your comments in the comment section below the article.

Nowadays, there are many password generators available that can create strong passwords; we can refer to and use them instead of having to think of a complex password.
