

How to check if your computer has Bluetooth?

If you use an iPhone, Android, or laptop, then it will definitely have bluetooth, but if you use a desktop PC it is unlikely. So how to check?

Bluetooth is a very useful connection that makes sharing data on your phone or laptop easier and faster. However, many users when transferring computer files do not receive and do not understand why. In the process of using, there are many cases wondering why the computer does not have Bluetooth or on a laptop without Bluetooth, how to know if the computer has Bluetooth or not and these questions are mainly due to users have applied use every way to find but can't tell if the computer has a Bluetooth connection. And more importantly, whether or not a laptop or desktop has Bluetooth or not will determine whether you can send files between your computer and your phone using Bluetooth.

Today we will show you how to test your laptop with Bluetooth. It helps you to know the reason for sending files between your computer and the phone. With sharing below hope you will have a trick to use your computer. To check, follow these steps:

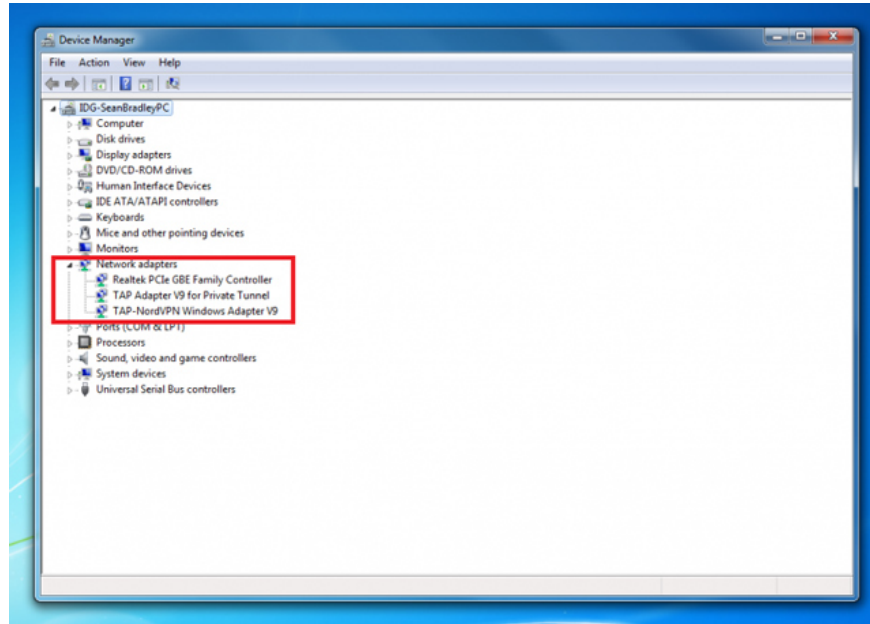

Step 1 : First, open the computer and press the Windows key + s key combination, after the system opens, find the keyword Device Manager, then click to open the device manager on Windows 10.

Step 2 : In the list displayed in the Device Manager window, look for Bluetooth or Bluetooth Radios. If one of these items is available, your computer supports Bluetooth. Otherwise, if you don't, unfortunately your computer

cannot connect to Bluetooth.

Step 3 : If not in the original list, click on **Network Adapter** , find the list to see if there is any item with Bluetooth, if so, congratulations, your device is equipped with Bluetooth.

If both of these steps are not available, the chances are high that your computer is not equipped with Bluetooth. To add more bluetooth to connect wireless headphones, wireless speakers to your computer, you need to buy a bluetooth transmitter (Bluetooth USB Dongle or many people called Bluetooth USB for compact).

I wish you all success!
