

How to check if your payment card information is leaked

If you feel anxious, do not know if your payment card information is leaked, you can access the leaked information check website by CyRadar - a security startup developed by FPT Corporation below to check.

If you feel anxious, do not know if your payment card information is leaked, you can access the leaked information check website by CyRadar - a security startup developed by FPT Corporation below to check.

CyRadar's tool will use user input to compare with previously leaked lists of cards and emails. The data that users enter into this site will not be stored. In addition, users do not have to worry about being stolen cards when using this tool because the data entered is only the first 6 digits and the last 4 digits of the card.

Users can access the link below -> enter the card number (first 6 digits and last 4 digits) or email address.

1. <https://breach-check.cyradar.com/>

In case your payment card is on the leaked list, you should temporarily lock the card and switch to cash transactions. If your email address is exposed, you should change your password and check if any strange device is logged in with your email.
