

How to check QR code safety before scanning

QR codes are not necessarily safe for you to scan content. Therefore, we can check the safety of QR codes according to the instructions below, with a very simple implementation.

Currently, QR codes are becoming a popular, fast connection method and are used in many areas of online payment transactions such as withdrawing money using Vietcombank QR codes, or messaging chat applications, making friends on Zalo using QR codes, etc. However, QR codes are not necessarily safe for you to scan content. Therefore, we can check the safety of QR codes according to the instructions below, with a very simple implementation.

Instructions for checking QR code safety before scanning

Step 1:

First, access the RevealQR website by following the link below on your phone.

Step 2:

At the RevealQR interface, first we **click on the RevealQR now box. It's free!** to use the tool for free. Then **click on login** to log in and use your account.

QR codes are everywhere now, which makes them an invaluable tool that everyone has access to. Unfortunately, QR codes may not be as safe as you think they are, especially because the URLs are hidden and it's almost impossible to tell where they will take you if you scan them.

RevealQR makes it easier to find out what's behind the QR code so you can know if a QR code is safe, *before* accessing it.

RevealQR now. It's free!

Challenges

Step 3:

If you already have a RevealQR account, enter your account information to log in, or **click here to create a new RevealQR account** . You **enter your personal email address** to register for an account. At this time, the website will **send a verification code to the email** where you registered your account for us to confirm.

Login

Option 1: Use the following providers to access RevealQR *without registering.*

Sign in with Google

Option 2: RevealQR Account

Sign in with your free RevealQR account:

Log In

If you don't have an account, you can create a free one [here](#).

Step 4:

After verifying your account, we will log in to your registered account.

Step 5:

In the website interface, we **click on the Choose file icon** to upload the QR code image. Select the method to upload images to the website to upload photos. Then you wait for the website to analyze the QR code and notify you whether the QR code is safe or not.
