The battery is a very important component on the iPhone if you do not notice and monitor the battery level of the iPhone, you may have trouble with your iPhone. In the article below, TipsMake.com guides you to read the operation of checking the number of iPhone charges and the level of the bottle on the iPhone so that you can handle it promptly.

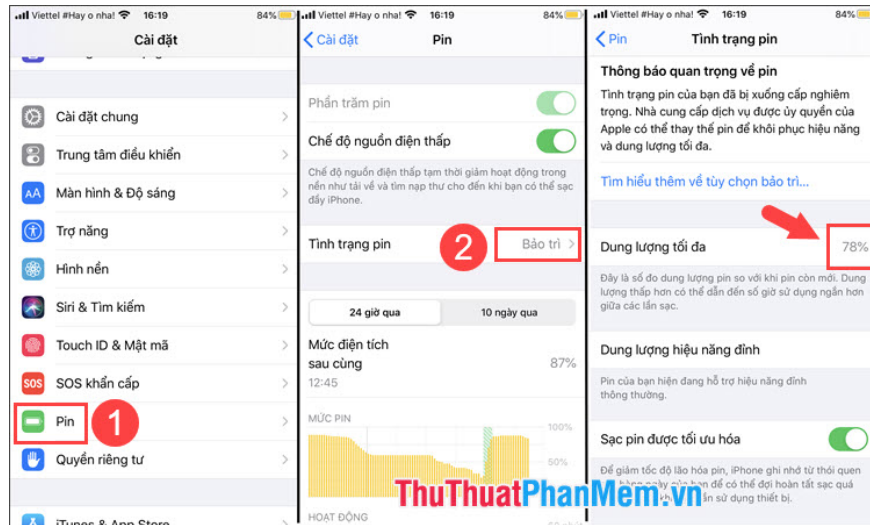

## 1. Check the battery level without software (Requires iOS 11.3 or higher)

To check the battery level on the iPhone battery, from iOS 11.3 version, Apple has equipped the battery level check feature for users to easily manage and replace the battery in time. To test this way, do the following:

You open **Settings** => **Battery (1)** => **Battery status (2)** . You can then see the maximum remaining battery capacity in the **Maximum capacity section** . As shown below, you can have your iPhone with 22% battery bottle.

**Note:** For iPhone 5s and earlier models (5s, 5c, 4s .), we can not check this way.

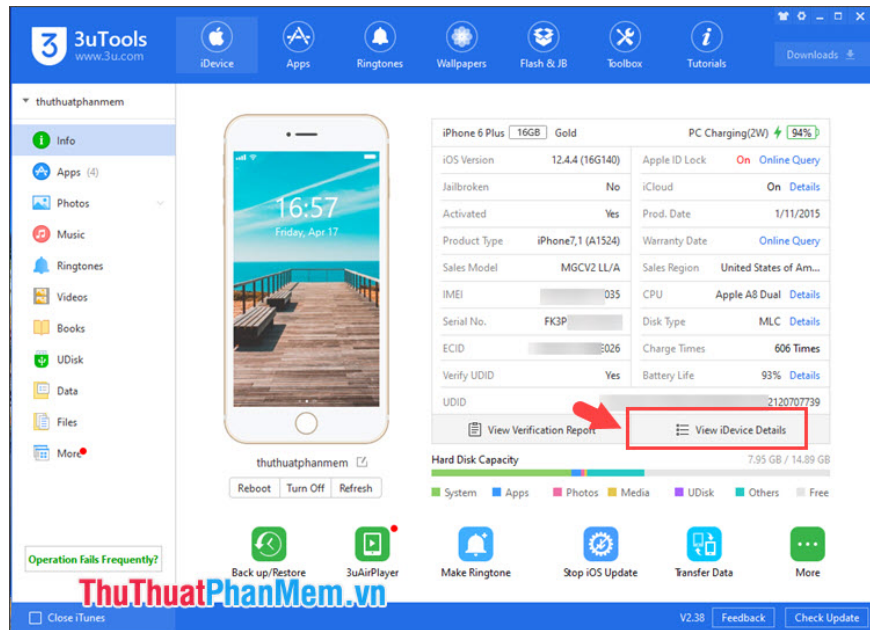

## 2. Use the software to check the number of charges and battery level

### 2.1. Check the battery with 3uTools software

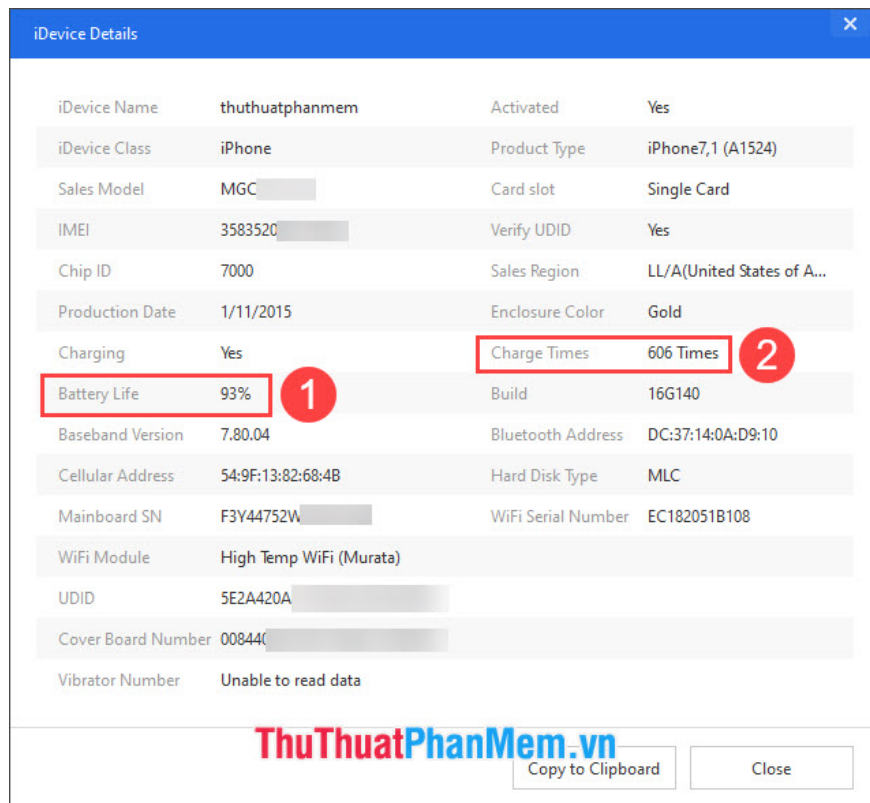

**Step 1:** Download and install **3uTools** at <http://www.3u.com/>

**Step 2:** On the main interface of 3uTools, click **View iDevice Details** .

After the notice board appears, we can see the remaining battery capacity ( **Battery Life** ) (1) and the number of iPhone ( **Charge Times** ) (2) through the report below.

Welcome to iBackupBot for iPad iPhone 5.6.1

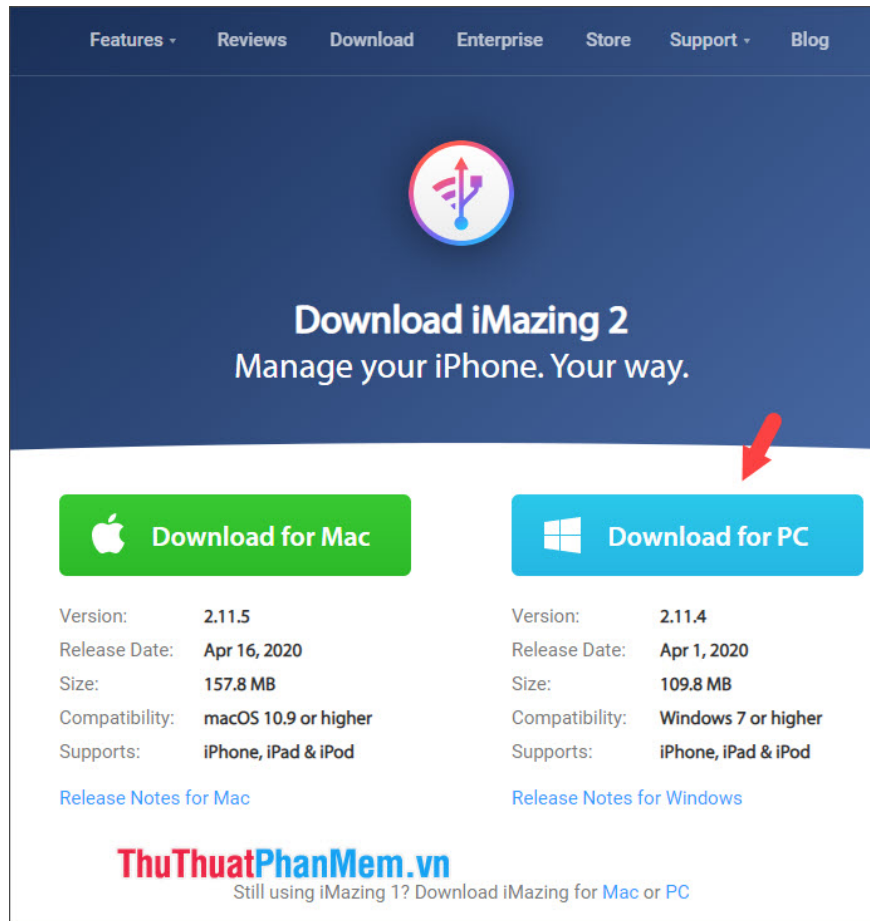

**Step 3:** You notice two items that are localized **CycleCount** (number of charges) and **Full Charge Capacity** (Maximum charge capacity). As shown below, my iPhone has been charged 606 times and the battery capacity has been reduced from 2855 to 2531 mAh, which means 88% of the actual battery capacity is left.

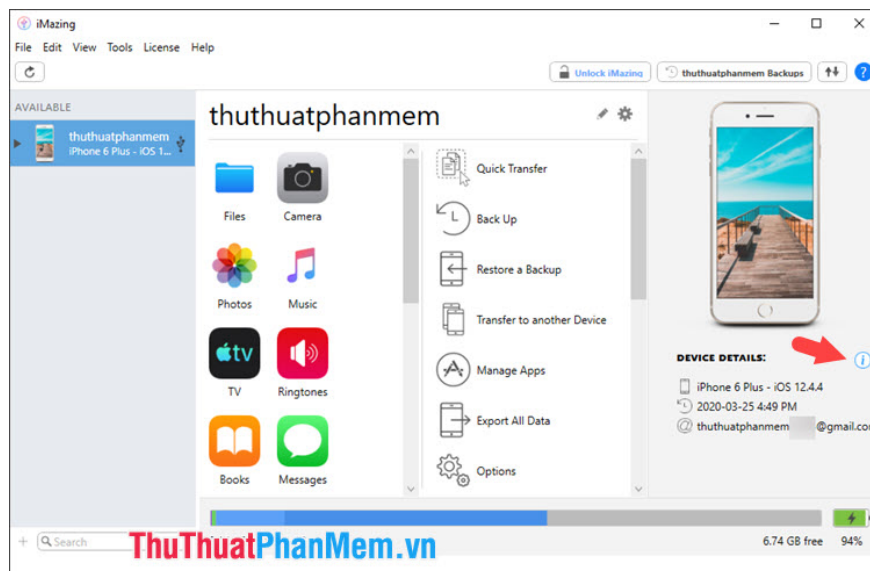

## 2.3. Check battery status with iMazing

**Step 1:** You visit <https://imazing.com/download> to download **iMazing** .

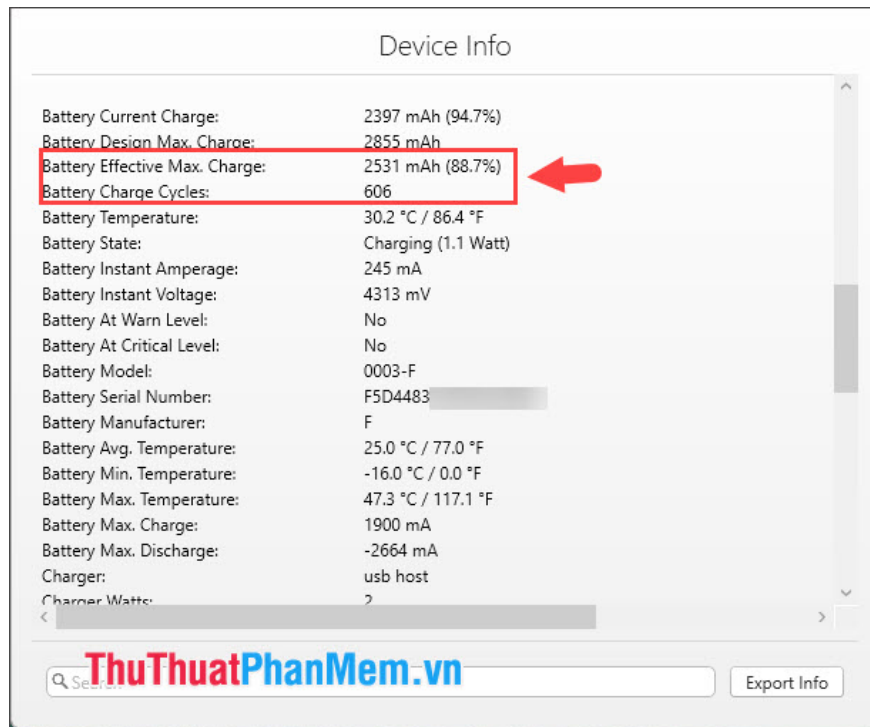

Next, select **Download for PC** to download to the computer.

**Step 2:** On the interface of the main page, click the letter icon (i) in the section **DEVICE DETAILS:** to see details of the device.

**Step 3:** Here, we have two important parts about the battery: **Battery Effective Max. Charge** (maximum battery capacity) and **Battery Charge Cycle** (number of charges). As shown below, my battery is **88.7%** compared to the designed capacity and the number of charges is **606** times .

With ways to check the battery capacity, readers can easily check and find a reasonable replacement battery solution to avoid future problems. Good luck!
