

How to check which version of Windows your computer is using?

For many people who are new to computers and laptops, checking which version of Windows your computer is using to install the appropriate software is a very new concept. Therefore, HACOM will guide you on how to check your computer's Windows in the article below!

Windows laptops are often very diverse with many models and generations, easy to choose and are preferred by the majority of users. However, installing the software correctly for the smoothest use depends on the version of Windows on the computer. Therefore, in this article, I will guide you in detail on how to check the Windows version on the computer.

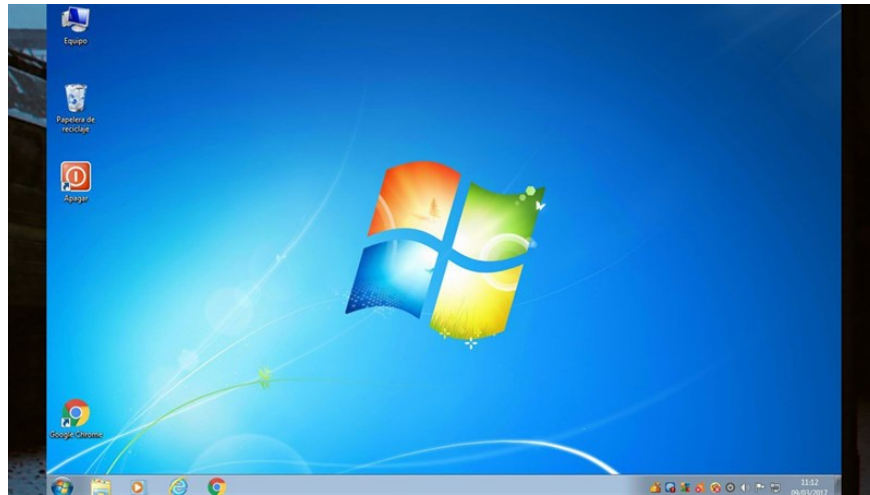

How to check Windows version on computer

First, you can quickly determine the Windows version you are using through the system interface, but this method is not accurate if your computer has Theme or Launcher. You can refer to the Windows XP, Windows 7, Windows 8 and Windows 10 interfaces with the images below.

Next, to determine more clearly about the operating system version, right-click on This PC (or My Computer for lower versions). Then select Properties > About to see detailed information about the device.

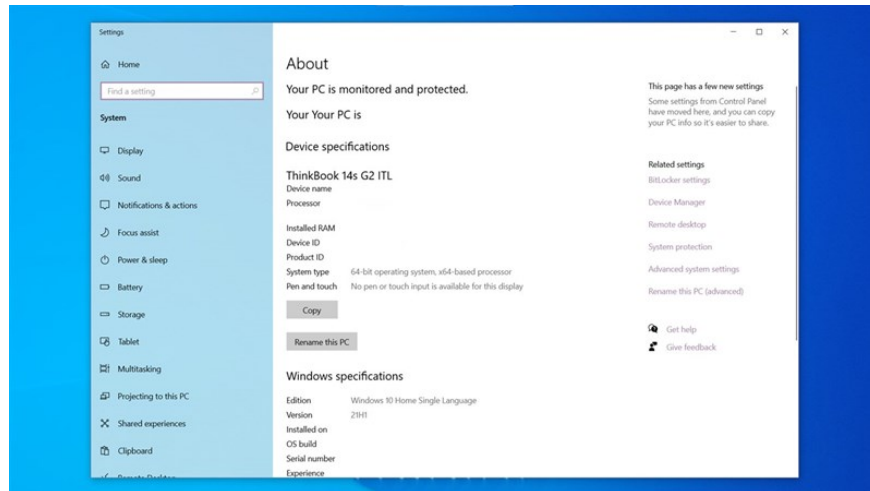

In addition, there is another way on Windows 10, you press the Windows + i key combination to open Settings.

Then you select the path System > About to check most accurately.

Here you can see if your computer is running 32-bit or 64-bit and the exact version of Windows updates.
