

# How to Check Your Computer's System Information

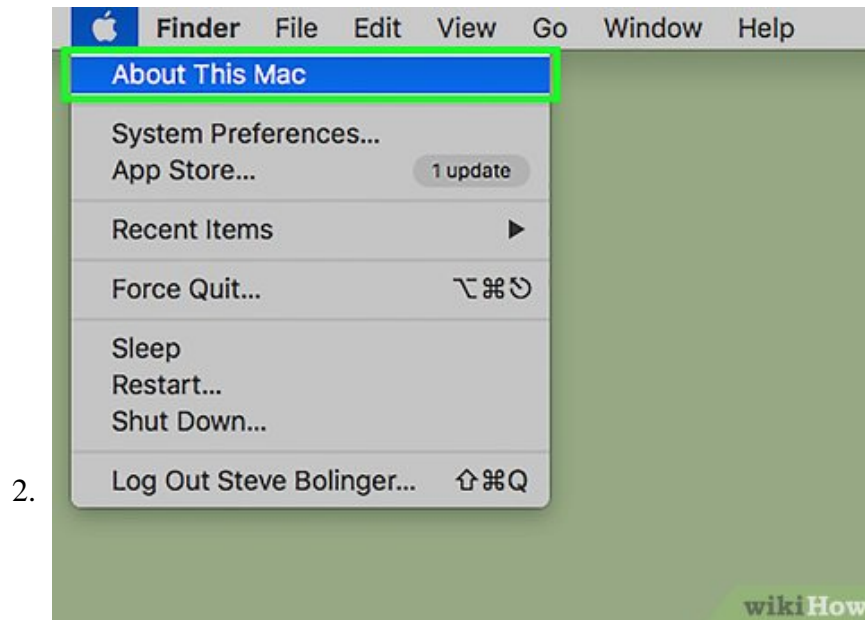

This wikiHow teaches you how to view your computer's hardware and software specifications. Click the Apple menu. It's the apple-shaped icon in the top-left corner of your Mac's screen.

Method 1 of 3:

## Mac

**Click the Apple menu.** It's the apple-shaped icon in the top-left corner of your Mac's screen.

Click **About This Mac**. This option is near the top of the drop-down menu.

**Review your Mac's system information.** There are several tabs at the top of the "About This Mac" window that you can use to view different type of information:

1. **Overview** - View your Mac's operating system, processor, and memory information here.
2. **Displays** - View information about your Mac's screen and any attached displays.
3. **Storage** - View your Mac's storage allocation, including how much space files are taking up and how much space remains.
4. **Support** - View a list of resources to help solve any potential problems.
5. **Service** - View your Mac's service history (e.g., warranty information).

Method 2 of 3:

## Windows 10 and 8

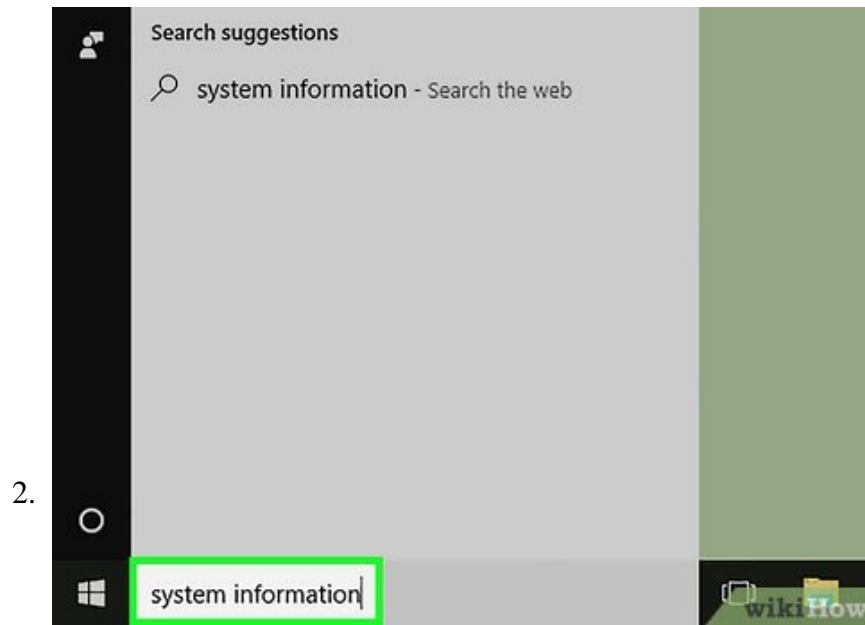

1.

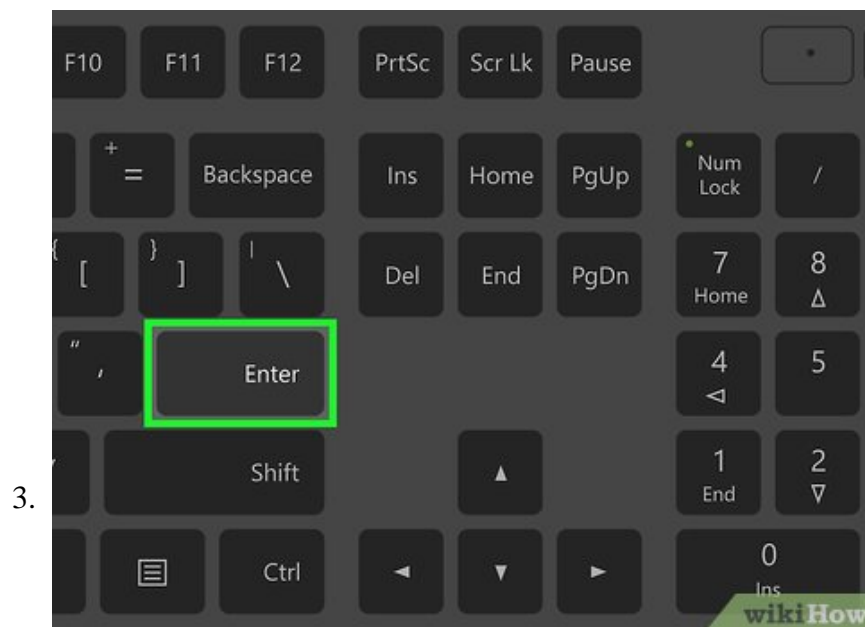

**Click the Start**

**button.** It's in the bottom-left corner of the screen; doing so will open the Start menu, which has a built-in search feature.

Type **system information** into the search bar. It's in the bottom-left corner of the screen.

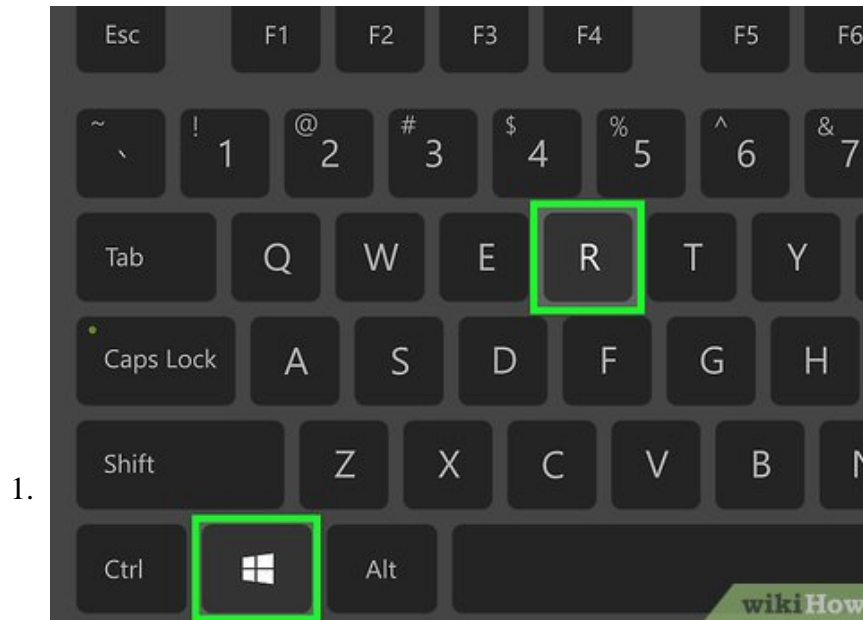

Press **Enter**. Doing so will open the System Information window. There are four tabs listed in the top-left corner of the window:

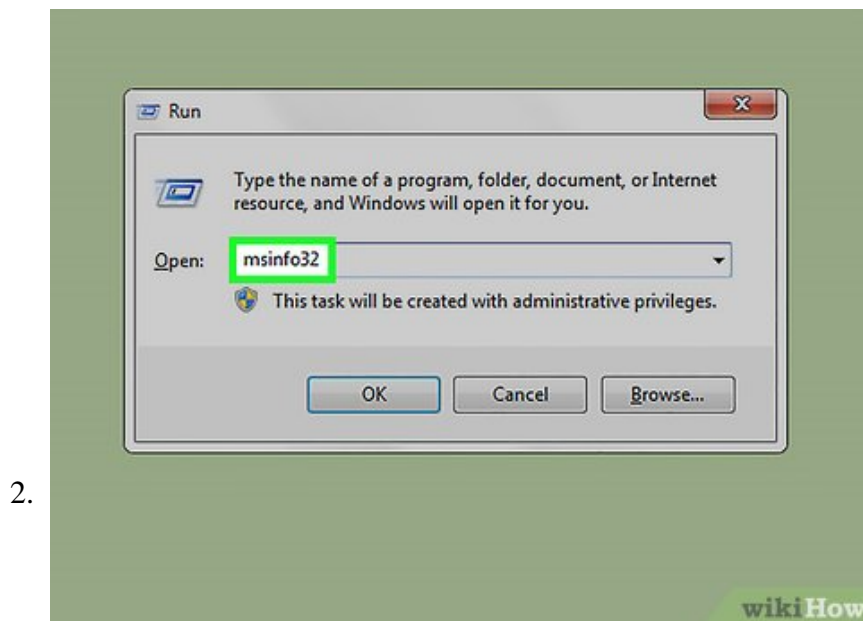

1. **System Summary** - This is the default tab to which System Information opens; it contains details about your computer's operating system, installed memory, and processor type.
2. **Hardware Resources** - View a list of all hardware drivers and information associated with devices (e.g., webcams or controllers) associated with your computer.
3. **Components** - View a list of technical components on your computer such as USB ports, the CD drive, and speakers.
4. **Software Environment** - View drivers and running processes on your computer.

Method 3 of 3:

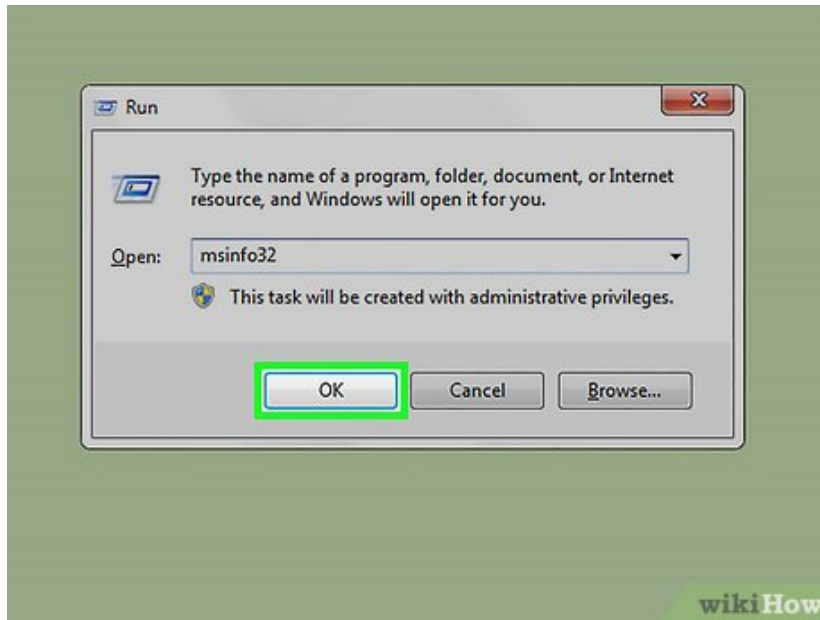

## Windows 7, Vista, and XP

**Hold down Win and press R.** Doing so will open Run, which is a program that allows you to run system commands.

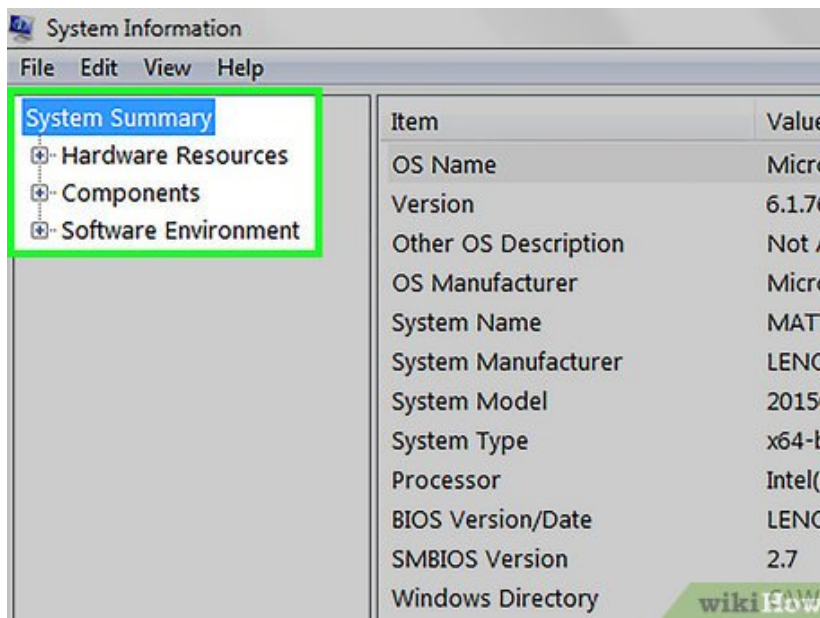

**Type msinfo32 into the Run window.** This command opens your Windows computer's system information program.

3.

Click **OK**. It's at the bottom of the Run window. Doing so will open the System Information window.

4.

**Review your PC's system information.** There are several tabs in the top-left corner of the window that you can use to view different aspects of your system:

1. **System Summary** - This is the default tab to which System Information opens; it contains details about your computer's operating system, installed memory, and processor type.
2. **Hardware Resources** - View a list of all hardware drivers and information associated with devices (e.g., webcams or controllers) associated with your computer.
3. **Components** - View a list of technical components on your computer such as USB ports, the CD drive, and speakers.
4. **Software Environment** - View drivers and running processes on your computer.
5. **Internet Settings** - Your computer may not have this option; if it does, you can use this tab to view various pieces of information about your computer's internet connection.
