

How to choose a dehumidifier for families in the monsoon season

In this article, TipsMake.com will share with you how to choose a dehumidifier for your family to 'cope' with the upcoming humid weather days.

On days of wet, rainy weather, dehumidifiers are the most sought after devices. So standing in front of hundreds and thousands of products with different styles, prices and features, which one should we choose? **How to choose a family dehumidifier** that TipsMake.com shares below will help you answer this question!

How to choose a dehumidifier for the family

Humidity is a typical weather pattern in Northern Vietnam. In these days, the humidity in the air can be up to 90%, making the floor, walls always wet, dry clothes, mold fixtures, electronics broken by microchips soaked in water . Not only affecting the living, prolonged humidification also makes us susceptible to respiratory diseases, especially pregnant women, the elderly, children . In addition to air conditioning, dehumidifier is the device can help you 'cope' with this situation.

Wet weather affects the health and activities of people

The type of dehumidifier on the market today is very diverse with hundreds, thousands of different products. To choose the right product, quality assurance, when buying, we need to pay attention to many factors, especially type, brand, price, features, capacity, noise .

Types of dehumidifiers

Dehumidifiers are divided into 3 main types: condensate dehumidifier, rotor dehumidifier and dehumidifier using ion filters. In particular, condenser dehumidifier is the most popular product line, often used in homes, offices. This device works like an air conditioner with the basic principle of cooling and condensing. water capacitor.

Dehumidifying capacity household dehumidifiers

Desiccant capacity is one of the most important and important parameters of a dehumidifier in the home. It shows the amount of water that the machine can absorb per day. Typically, the dehumidifying capacity of the machine will be proportional to the area of the space used:

1. Room with an area of less than 15m²: Should choose a machine with a dehumidifying capacity of about 4 to 7 liters / day.
2. Room area from 15 to 20m²: Suitable for residential dehumidifiers with a capacity of about 7 to 14 liters.
3. Room with an area of 20m² or more: Need to use a household dehumidifier with a capacity of over 16 liters / day.

Families today often use dehumidifiers with a capacity of about 12 to 16 liters / day. In our experience, you should buy machines with a slightly larger capacity to be able to use flexibly between rooms. For example, you only have 1 dehumidifier but your house has 2 rooms, 1 room with 10m² and 1 room with 18m². In this case, you should choose a machine with a capacity of about 7 to 14 liters / day instead of choosing a capacity of 4 to 7 liters / day.

The capacity of a dehumidifier must match the area of space used

Design, style

Although the design, external design is not an important factor, but if "beautiful is better". Dehumidifier family with compact design, beautiful will help your space more luxurious. In addition, to make using the device easier, you can consider products with a handle, moving wheels below.

Other features

In addition to dehumidifying, balancing moisture in the air, many current dehumidifiers are also equipped with many other auxiliary features and utilities, such as clothes drying, air purifying, and cleaning. Plasmacluster Ion technology, timer feature on and off . Machines with many features, of course, will bring many benefits to users, but in exchange for their prices are often higher than other products. So, please consider between demand and financial conditions to make the right choice!

Dehumidifier today is equipped with many additional features and utilities

Noise level

Like many other devices, indoor dehumidifiers can make noise during operation. If the noise is too loud, it will affect the user's life, especially at rest time. Therefore, we should choose products with the lowest noise level as possible. The noise level of the unit is in dB. If you are a bedroom, a room with a small area, you should choose a machine with a noise level below 48dB, while for larger rooms such as the living room, the machines with a noise level of 60dB or less are acceptable.

Household dehumidifier price

The type of home dehumidifier currently popular prices in the range of 2 to 15 million. Their price will depend on many factors, especially the capacity, technology platform, features, brands, suppliers . High-priced products often have many features. , good desiccant and design can stand out from the low-cost models. In order to buy good quality products at reasonable prices, you need to compare and evaluate between product lines before deciding to buy.

The price of a household dehumidifier depends on many factors

Trademark

The market of home dehumidifiers is really diverse with dozens, hundreds of different brands. However, not all names can bring us quality products at good prices. If you still have not found a reputable indoor dehumidifier, you can refer to a number of brands such as Electrolux, Sharp, Edison, Tiross, FujiE .
