How to choose all the same colors in Photoshop

Open the image and in the menu, click **Select > Color Range** .

In the control panel that opens, you have two ways to choose the color. You can use the **Eyedropper** tool to select a color by clicking anywhere on the image and Photoshop automatically selects all the same colors in that pixel.

If you want a little more nuance, click the Eyedropper tool with the plus icon next to it. This allows you to make many choices. For example, you can select all golden shades in a photo or select more than one color if you like.

If you see a color or nuance that you don't want to select, click on the Eyedropper tool with a minus sign next to it and click on what you want to delete from your selection.

You can fine-tune your selection by dragging the slider in **Fuzziness** . Drag the closer to the left of the slider, the more detailed your selection will be, and drag the closer to the right, your selection will have more similar colors.

How to see what you have chosen

In the Color Range dialog box, you have a number of options to view your images. In the dialog box, **Selection** will display a polarized black and white thumbnail. Everything you choose will appear white, while the rest of the image is black. If you choose **Image** , you will see a thumbnail of your image or design.

You can also preview selections in real photos, useful for detailed images. Select four options from the **Selection Preview** drop-down menu:

1. **Grayscale** : This image looks like a thumbnail in the dialog box.
2. **Black Matte** : All images are blurred, except for your choice with the original color.
3. **White Matte** : The whole image is white, except for your choice with the original color.
4. **Quick Mask** : The image has a red Photoshop mask that covers it except for your choice with the original color.

How to edit color choices

Once selected, you will see the border of the selection represented by a flashing dotted line that looks like a marching ant. You can change the color in several ways in the menu under **Image > Adjustment** . Here are some examples:

1. To change it seamlessly, you can change the color of the image by going to **Image > Adjustments > Color Balance** .
2. You can change the selection to black and white by going to **Image > Adjustments > Black and White** .
3. You can change the color and color saturation (saturation) by going to **Image > Adjustments > Hue / Saturation** .
4. You can change the brightness or contrast of the selection by going to **Image > Adjustments > Brightness / Contrast** .

This is not a complete list of adjustment tools that you can use to change images, these are just a few tools that make it easy to make useful seamless changes when performing tasks. like changing eyes or hair color,

brightening images.

In this example, the left half of the image has been brightened and the color balance changed. The right half of the image remains the same:

If you are looking for ways to make the correct choices in Photoshop, the Refine Edge Tool is a great option to simplify the process of making complex choices.
