Criteria for choosing good wired headphones

1. Choose good wired headphones according to your intended use

Similar to your need to choose headphones, choosing a good wired headphone will depend on your needs. Including studying, working or entertaining, will help you have an overall view to choose a good wired headphone that suits you. This helps maximize the performance of the device and save costs for you.

2. Choose wired headphones according to product price

Having a budget to invest in a wired headset is also an important factor, from wired headset models from a few hundred thousand dong to a few million dong. With famous brands specializing in producing high-end headsets,

the cost will be very high, in return you will enjoy the right quality and accompanying services. From clear, clear sound, design that does not hurt the ears, good bass beats, durability accompanied by excellent after-sales modes.

3. Choose wired headphones specifically for your device.

Companies also have many different wired headphone designs and features to suit the computer device (pc/laptop) or phone that you will connect to use.

You need to consider carefully and look at the parameters and features of wired headphones or research before choosing.

4. Choose wired headphones according to the style and design you love

Wired headphones come in a variety of types and models, ranging from classic, traditional designs to new designs decorated in modern trends.

You can choose from a number of wired headphone models with on-ear or in-ear designs. Depending on your preferences and needs, you should consider choosing a model:

1. **On-ear headphones:** The headphones are designed to be covered when worn, and will wrap around the outside and hug the ears, helping users to use them comfortably for long periods of time, as well as focus more on work. On-ear headphones are often designed to be large, more suitable for users in private spaces, needing quiet, suitable for gamers or people who have to wear headphones for long periods of time.
2. **In-ear headphones:** These are in-ear headphones, usually compact, lightweight and convenient to carry, especially for those who travel a lot. In-ear headphones have plastic, soft, colorful wires. The characteristics of this type of headphone are fashionable and compact in size, however, using these headphones for a long time is very difficult because it will cause ear pain.

5. Choose good wired headphones from reputable brands

Good, reputable brands are always the top choice of consumers. Good wired headphones from big brands are often highly appreciated and chosen by consumers.

You can refer to some good wired headphone brands at TipsMake such as: ASUS, COOLER MASTER, CORSAIR, DAREU, EDIFIER, E-DRA, JABRA, JBL, KINGSTON, LOGITECH, RAZER, SONY, STEELSERIES,... See more here

6. The sound quality of the wired headphones is good

This is a very important criterion for choosing your good wired headphones. Before buying, you need to carefully consider the sound quality, including the input signal (headphones) in terms of volume, bass, tone,. or even the received signal: clear, no jerking, lag, good signal, fast response.

Top best wired headphones 2021 for you

Asus ROG THETA 7.1 Headset

The latest in premium 7.1 surround sound technology from Asus is here! The ROG Theta wired headset is the latest model with eight separate drivers (2 sides, 4 drivers on each side) and is also the first headset to feature

virtual subwoofer technology for 7.1 surround sound directly to gamers' ears.

Instead of 5 small drivers. Asus ROG Theta wired headset has up to 4 ASUS Essence drivers used to support virtual subwoofer technology to bring a wide sound field, deep bass. Bringing great experiences to listeners. With this ability, the fidelity will become amazing with powerful virtual bass. Therefore, with in-game sound, especially for survival shooting games, it will be precisely positioned in 3D space, you will hear every corner of every gunshot and footstep, bringing a breakthrough feeling for a great, unparalleled gaming experience.

The ROG Theta 7.1 wired headset comes with a 7.1 DAC with the SupremeFX S1220A audio codec. Inside the DAC are four ESS 9601 headphone amplifiers for precise effect placement across a wide soundstage. Even with the powerful home theater processor, the ROG Theta 7.1 stays cool and comfortable to use thanks to a heat-dissipating thermal compound that dissipates heat efficiently.

The ROG Theta 7.1 wired headset comes with the world's first AI-powered noise-canceling microphone, which features a dedicated processor loaded with AI-trained smart profiles to eliminate over 50 million types of background noise while preserving the harmony of the sound for crystal-clear voice communication. This intelligent noise-canceling mic reduces background chatter, keyboard clatter, and mouse clicks by up to 95%, allowing you to communicate clearly. It also includes a detachable unidirectional microphone certified by both Discord and TeamSpeak, and an LED indicator when in use keeps you in control of your communications.
