2. Top 5 best mini projectors 2018
3. Important factors when choosing a TV screen to watch the 2018 World Cup

## Resolution - the sharpness of the slideshow image

As we know, the situations in the game often take place very quickly and elusively, if you do not want to miss the important and exciting game happenings, you need to choose a line of resolution High to meet the best images.

However, it is not always necessary to choose projectors with too high a resolution, which is a waste. Depending on the size of the slideshow image you choose to match. When you zoom in on the big screen, it also means that you are stretching the pixel density on the frame, causing the image to start to break apart from the image. Usually with a projection size of over 100 inches you can choose from VGA resolution and above models that are fine for use as a football projector.

## The brightness of the projector watching football

An equally important criterion that you need to consider is the brightness of the projector, the higher the brightness, the brighter the projection image. You can base on the number of people and the room size to see the football as well as the ambient light to choose the right projector brightness.

1. If the screening room is a dark room or shown in the evening, the projectors with a light intensity of 800 - 1500 Ansi Lumens are a reasonable choice.
2. If the show room has a large area, the lighting room is less impacted by the light, you should choose the models with light intensity ranging from 1500 - 2500 Ansi Lumens.
3. If you are shown in the room under the influence of many electric lights or daylight, you need to choose the projector with light intensity on 3000 Ansi Lumens to meet the projection images when watching football World Cup 2018.

## The contrast of the projector

Basically, the projector's contrast ratio is the ratio between the brightest and the darkest area of the image when playing. The advice for you is to choose a contrast ratio of 500: 1 or more to get the image in. If you want to use the 2018 World Cup football projector in a room with light, you must choose a machine with higher contrast ratio like: 2000: 1, 3000: 1, 10,000: 1 or higher.

In general, this is just a parameter of the projector that is not so important in showing a video or an image so you can ignore this factor. However, if you have a financial balance, you can choose products that have as much contrast as possible according to your financial level.

## Proportion of screenings in the room

The rate of presentation is the minimum and maximum ratio when projected on the screen is how many inches. Same as above, the selection of the projection rate is based on the number of viewers, how the viewing space is football. For example, the number of viewers is over 50 and the space is large, the projectors with a large projection of 30 - 300 inches will be an accurate choice.

In short, to buy the best projector to watch football, you need to consider the above factors. At the same time, based on the financial situation and the presentation environment, select which projectors to choose in order of priority. Usually football matches usually show in the evening or watch indoors. This is an advantage that you can buy cheap projectors to use. Provided that the projection environment is without or with little light, you will

not need to choose high-intensity projectors, but simply choose moderate-intensity projectors that can meet your needs. watch football with a large screen over 100 inches.
