

# How to clean and disinfect on each flight to prevent Covid-19 epidemic?

In addition to international flights that are disinfected by medical spraying, domestic flights are also actively cleaned by Vietnam Airlines with a specialized disinfectant solution approved by manufacturers of Airbus and Boeing aircraft.

The process implemented by the company right from the moment of epidemic tends to increase, helping to minimize the risk of disease transmission, protecting the health of passengers and crew.

The entire passenger compartment, toilet, kitchen . on the plane are disinfected. Cleaning workers are protected by antibacterial masks, double layer gloves and hats.

With the cleaning process, there are 03 types of sanitary napkins used. White towels to clean the surfaces of the passenger and luggage compartments; Yellow kitchen towels and toilet pink towels.

Cleaning staff use Netbiokem DSAM chemicals, a specialized disinfectant approved by manufacturers Airbus and Boeing to clean items and interior surfaces on the plane.

The hygiene is focused specifically on items, the location where the guests touch by hand such as dining tables, bars for hands, entertainment screens, headsets .

. to the faucet knob, the sink, the kitchen .

Vehicles serving passengers with limited mobility are also sanitized with Cloramin B.

Disinfect balustrades, roofs of car ladders - positions hundreds of passengers exposed on the flight every day.

Every day Vietnam Airlines cleans dozens of domestic aircraft right after landing. Each aircraft is disinfected for 20-30 minutes, depending on its size, before being put back into operation.
