

How to clean junk files when drive C on the computer is full

If your computer's C drive is full and everything is slow, save these simple fixes to solve this problem quickly and effectively.

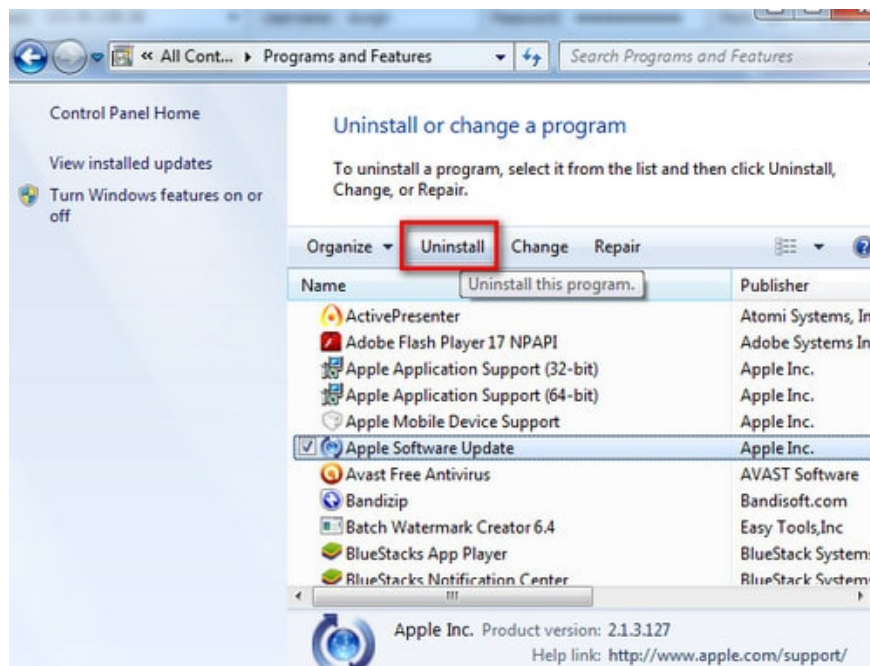

1. Reasons why drive C is full

- You install too many applications on it.
- Store too many temporary files, browsing history, installed but unused applications.
- Do not clean up drive C regularly, so many junk files arise.

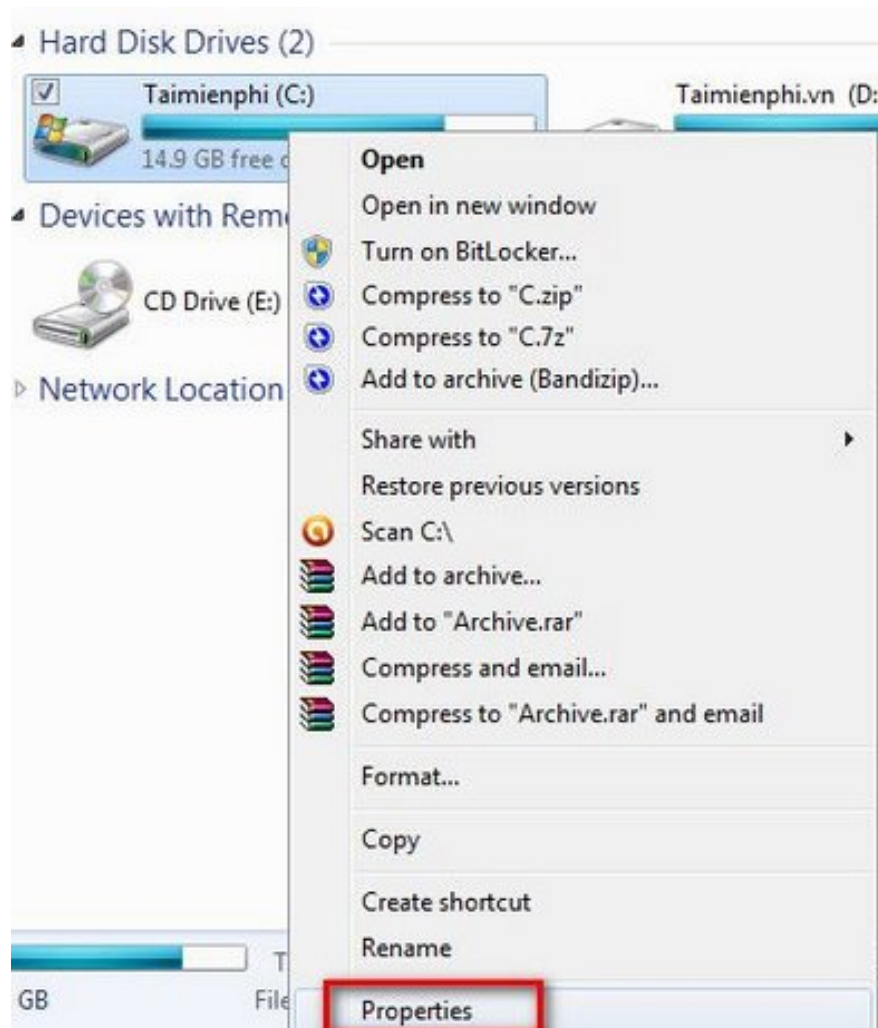

2. How to fix

Remove unnecessary applications from your computer by:

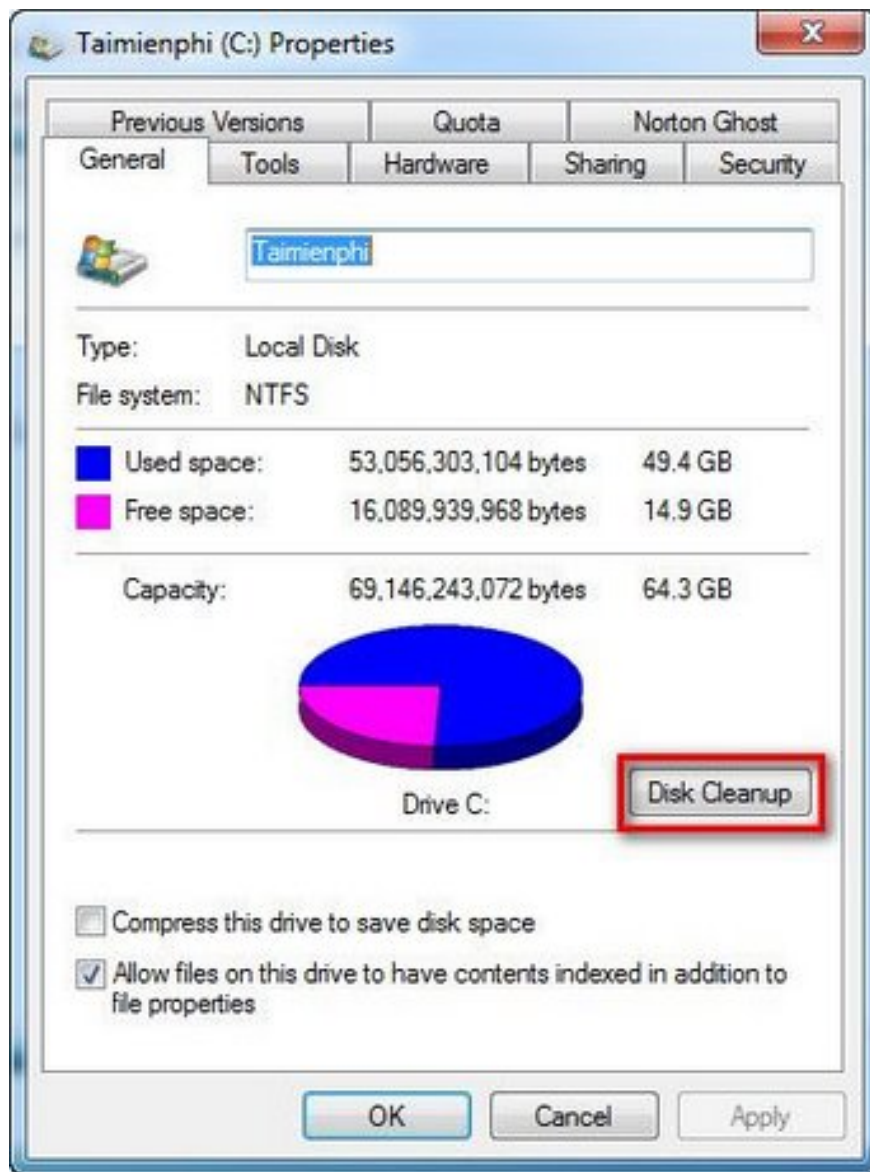

Go to **Control Panel** and select **Program and Features**

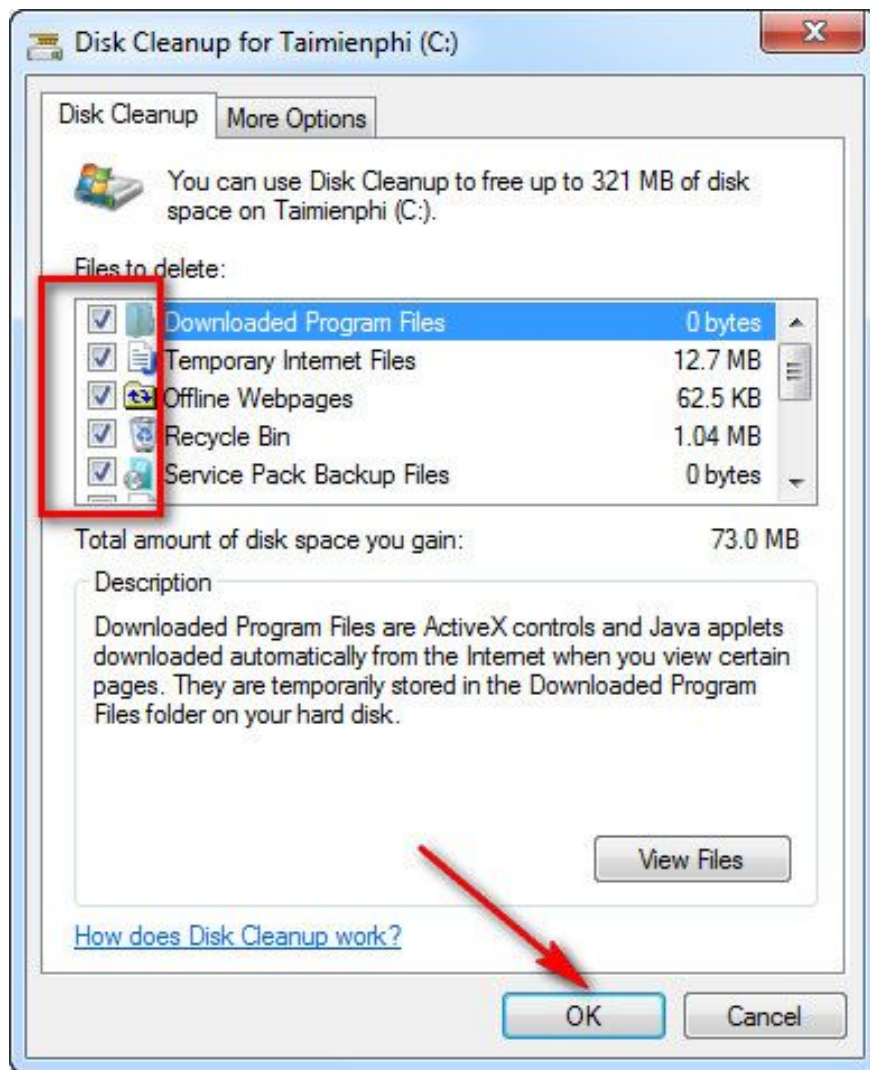

- Move data, folders stored on drive C to other drives (D, E.) folders such as Download
 - Remove junk files, temporary files with **Disk Cleanup** available in Windows
- Right-click on drive C and select **Properties**

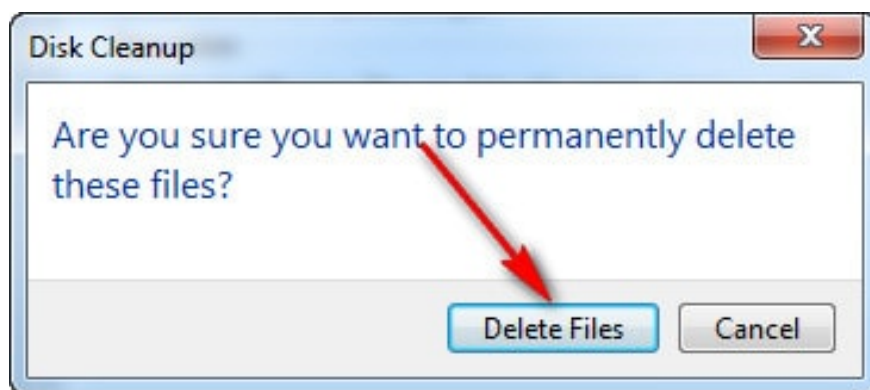

In the **General** tab, select **Disk Cleanup**

In the **Disk Cleanup** tab, select all then click **Ok**

Click **Delete Files** to delete junk files, temporary files on drive C

In addition to the above method, you can use computer hard drive cleaning support tools such as CCleaner to remove junk files on your computer very effectively. To understand more, please refer to our article on **cleaning hard drives with CCleaner** here. Hopefully the above methods will help you a lot.
