

How to clean the horizontal loading washing machine, top loading washing machine to always be clean

If the washing machine smells bad, then it will stick to your clothes when washing them. If there is residue in the washing machine, then it will get on your clothes during washing. Regardless of top or front load washing machine, no matter how expensive or cheap, new or old, you need to clean it and keep it fresh!

Although the washing machine is frequently exposed to detergents, that does not mean that the washing machine is always clean. If the washing machine smells bad, then it will stick to your clothes when washing them. If there is residue in the washing machine, then it will get on your clothes during washing. Regardless of top or front load washing machine, expensive or cheap, new or old, you need to be clean and keep your washing machine fresh!

How to clean the horizontal load washing machine (front door)

Step 1: Dip the sponge in a bowl of vinegar and wash the washer. If you haven't removed the mold yet, soak it in vinegar for about 20 minutes. Then, dry the gasket with a paper towel and use a bristle toothbrush to remove any remaining mold.

Step 2: Pour 500ml of vinegar directly into the drum and close the washer door before proceeding to the next step. If you see a lot of residue build up, add about 120ml of vinegar to dissolve the stain.
