

How to clean the refrigerator properly?

Cleaning the refrigerator regularly not only ensures that the refrigerator operates more durable, quieter, but also can extend the life of the refrigerator. Besides, the food stored in the refrigerator is also guaranteed more quality.

Regular cleaning of the machine will ensure the operation quality of the machine. The same with family refrigerators. When we clean the cabinet regularly, it will prevent the cabinet from having an unpleasant smell, the machine operates more smoothly, extending the life of the machine. Besides, reserve food will be ensured quality when cold storage, fresh and hygienic. Therefore, proper cleaning and cleaning of refrigerators is something you should do to protect the health of the whole family.

Note, before cleaning the refrigerator you need to pay attention to the following:

1. Unplug the refrigerator from the outlet before cleaning.
2. Do not use flammable or toxic liquid cleaners to clean the refrigerator.
3. Use dishwashing liquid or diluted soapy water when cleaning.
4. Do not use harsh detergents (bleach, chemicals, gasoline, oil .) or brushes that can easily fade, scratch the refrigerator paint color.
5. Do not use hot water to avoid cracking, deforming cabinet shelves.
6. Wipe off moisture with soft foam or dry cloth to prevent water or liquid from spreading to electrical parts and cause electric shock.

Step 1:

First, you need to unplug the refrigerator from the outlet before cleaning.

Currently, at the online trading channel META.vn, some brands of refrigerators are sold at competitive prices. Readers can refer to the link below:

Step 2:

Remove all food from the refrigerator. We should also remove out-of-date or unusable foods.

Step 3:

Remove and clean the compartments in the refrigerator. Each compartment in the refrigerator can disassemble the shelf and clean them. Use dishwashing liquid and a soft cloth to clean the shelves.

You can use warm water to clean stains on the shelves. Absolutely do not use hot water to avoid cracking or breaking cabinets.

Step 4:

To clean the inside of the refrigerator, use a dry, absorbent towel. Avoid using a wet towel because it can make the wounds wider.

You can use a little vinegar to dilute with warm water to clean the ratio of 1 part vinegar, 3 parts water. Vinegar also has the ability to kill bacteria and mold, while deodorizing the refrigerator is extremely effective thanks to the acidity available in vinegar. Notice to clean the door and rubber pad at the door. Especially the door cushions because this is a place where water is often stagnant.

Step 5:

Clean the outside of the refrigerator. With glass cabinets, use paper towels and water to clean the door surface and the handle. With a stainless steel refrigerator or powder coating, use a cloth dipped in vinegar and wipe on the surface of the cabinet. Take care to clean the refrigerator.

Step 6:

The drainage tray at the back of the refrigerator will usually evaporate, because when the heat comes from the cabinet's engine. If the back of the cabinet has a bad smell, or the water trough is too watery, remove it and clean it again.

Step 7:

Finally, you reattach the shelves in the cupboard, re-arrange the food in the proper compartment.

The refrigerator will operate again when plugged in. Some types of refrigerators, compressors (motors) of the cabinet will start after plugging in for 10 to 20 minutes.

Refrigerator cleaning is often overlooked by many families and there is no habit of cleaning the refrigerator regularly. Or when cleaning the cabinet just clean the cabinets and forget the rubber pad or drain tray behind the cabinet. Ideally, we should clean the cabinet once a month to ensure the durability of the cabinet as well as the amount of food stored in the cabinet.
