

# How to combine multiple cells into 1 in Excel does not lose data

Excel cell aggregation is too familiar to those who often have to work with Excel. So how to include the cell without losing data on Excel?

How to include cells in Excel when not entering content when merging the cell with the content? For many new acquaintances with Excel, the merging of cells is one of the basic operations, but it is quite embarrassing between 2 types of cells. If you include the box on Excel and enter the content, it is quite simple. So if you include the content after entering the content, will the content disappear?

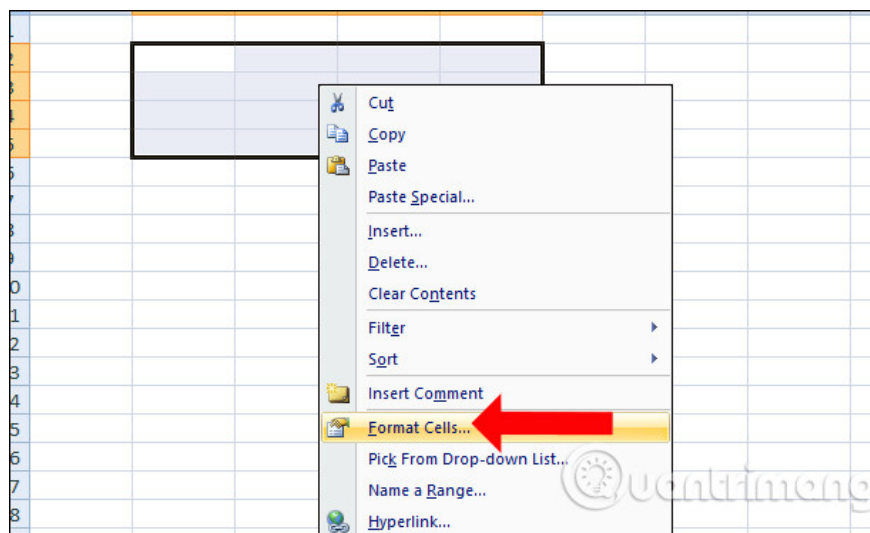

The following article will guide you how to combine multiple cells on Excel without losing data.

## 1. How to merge multiple cells in Excel has not entered data

### Step 1:

In the fields that the user wants to merge into 1, highlight and right-click and choose **Format Cells** .

### Step 2:

A new dialog box appears, click on **the Alignment group** and proceed with the customization as shown below.

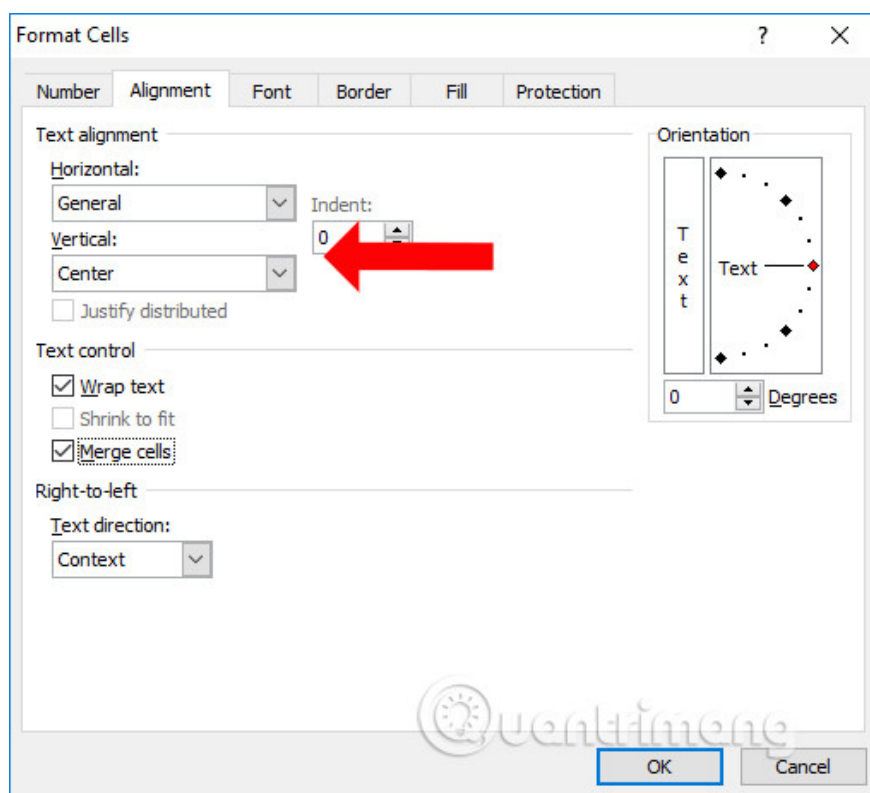

### Text alignment section:

1. Horizontal: If Center is selected, the text is displayed in the middle horizontally.
2. Vertical (vertical): Select Center to display text in the middle vertically.

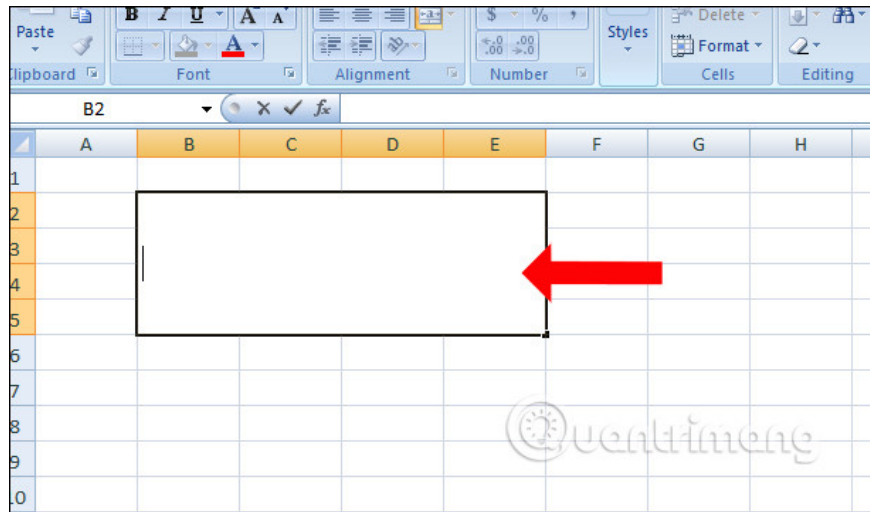

### Text control section:

1. Select Wrap text to align content later in the middle.
2. Select the Merge cells to perform cell pooling in Excel.

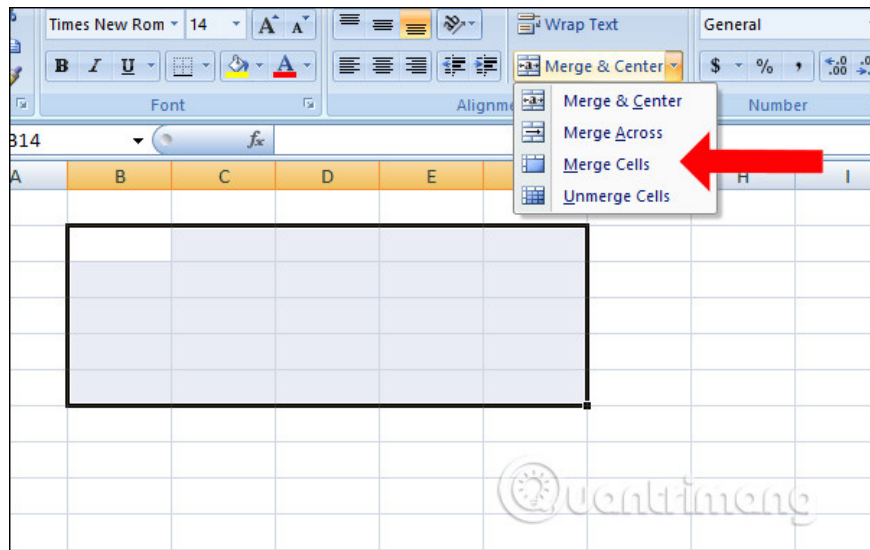

Finally, click **the OK button** below to proceed.

The end result will be interface as shown below. The cells have been combined into 1 together. Next, you just need to enter the content and the text will be in the middle of the box because it was set up in advance.

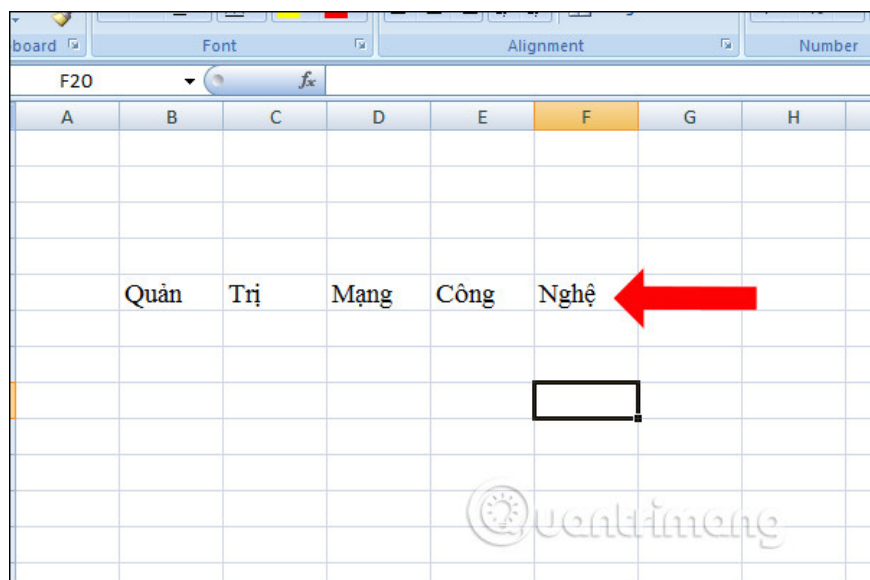

With **Excel 2007** and above, users can immediately click on **Merge & Center** with a variety of options.

## 2. Multi-cell Excel method does not lose data

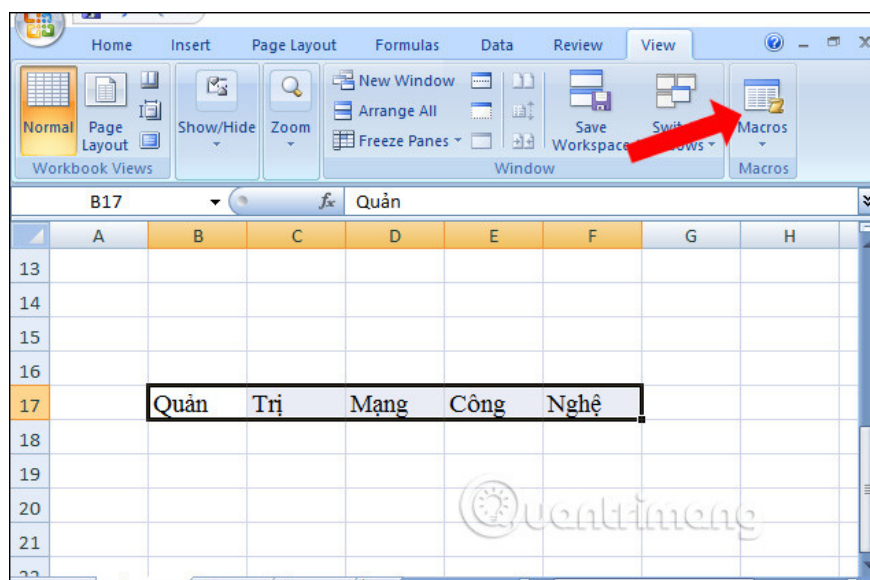

We will take the example with the text below. Each letter is in a different cell and you need to merge them in one cell without losing data.

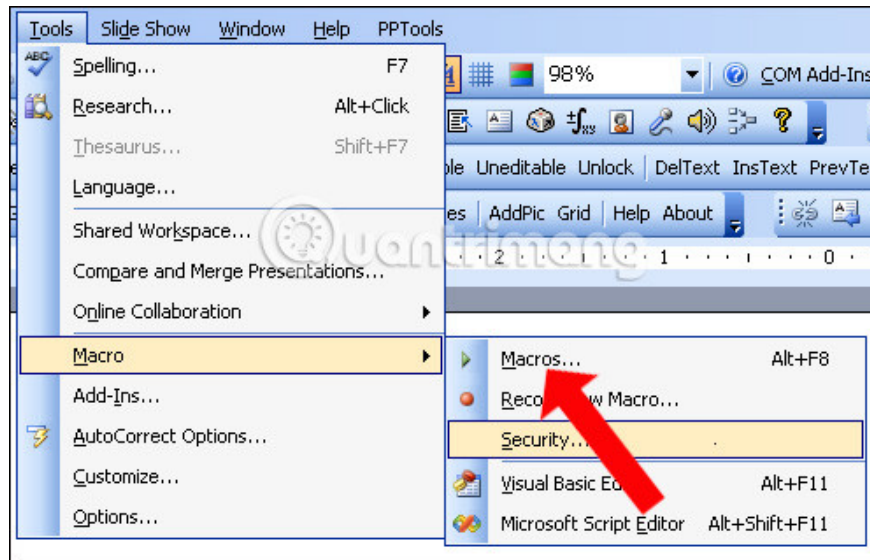

### Step 1:

Black out the entire number of cells to merge into 1 and then press Alt + F8, or Alt + Fn + F8 depending on the computer.

With **Excel 2007** and above, you can highlight all the cells you want to merge and then click the View tab above the interface, select **Macros** on the Ribbon.

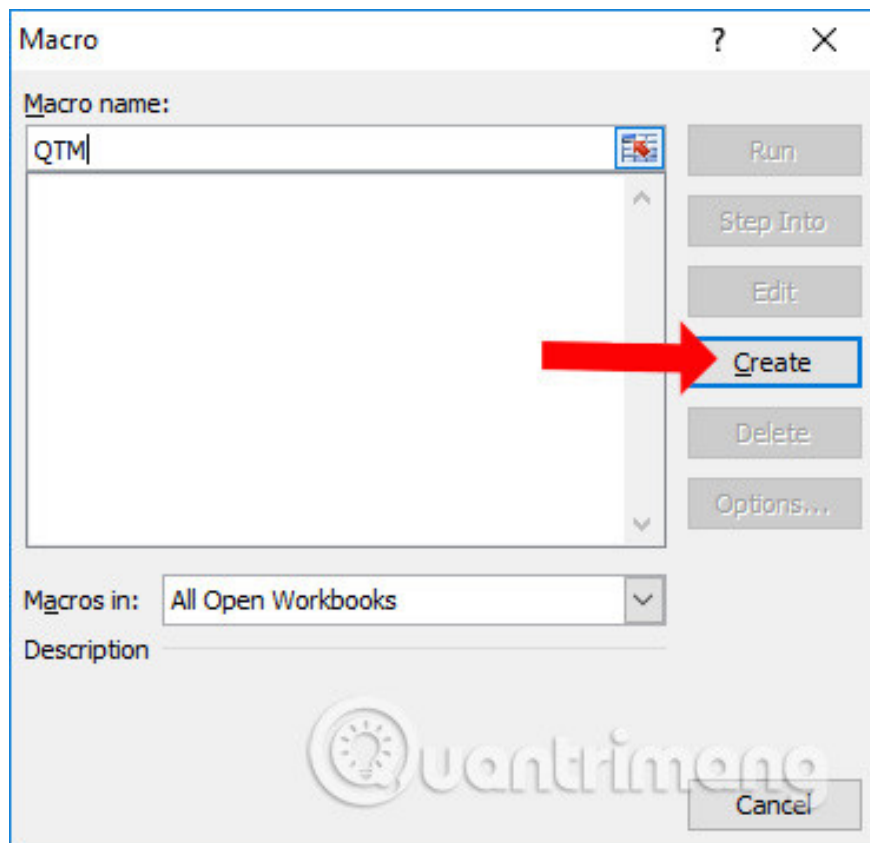

With **Excel 2003** , also black out the entire box and click on the Tools tab on the toolbar, select Macro to choose Macros .

### Step 2:

Appears the Macro dialog interface. In the **Macro name** bar, enter any name then press **the Create button** to create.

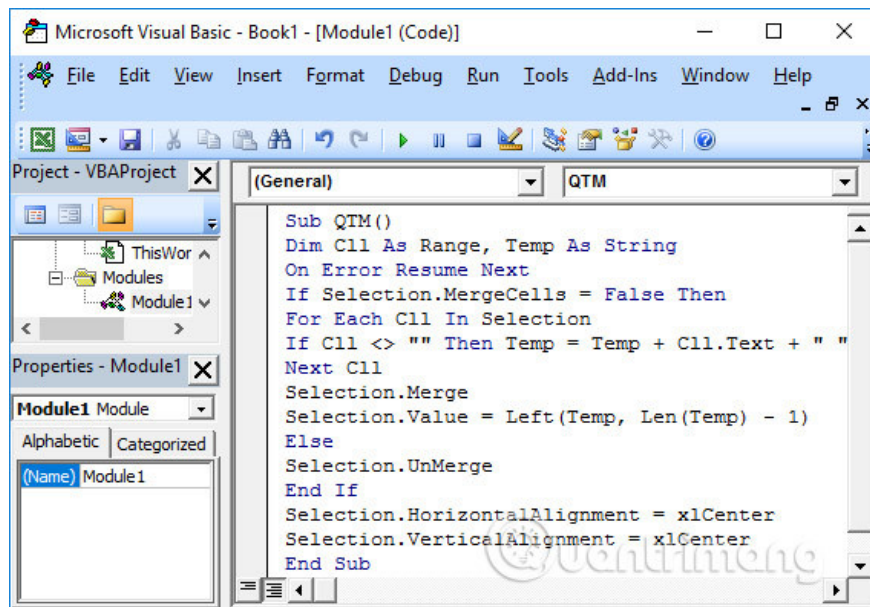

### Step 3:

The Microsoft Visual Basic window appears. Enter the code below into the middle of Sub QTM () . End Sub.

```

Dim C11 As Range, Temp As String
On Error Resume Next
If Selection.MergeCells = Then False
For Each C11 In Selection
If C11 > "" Then Temp = Temp + C11.Text + "
Next C11
Selection.Merge
Selection.Value = Left (Temp, Len (Temp) - 1)
Else
Selection.UnMerge
End If
Selection.HorizontalAlignment = xlCenter
Selection.VerticalAlignment = xlCenter

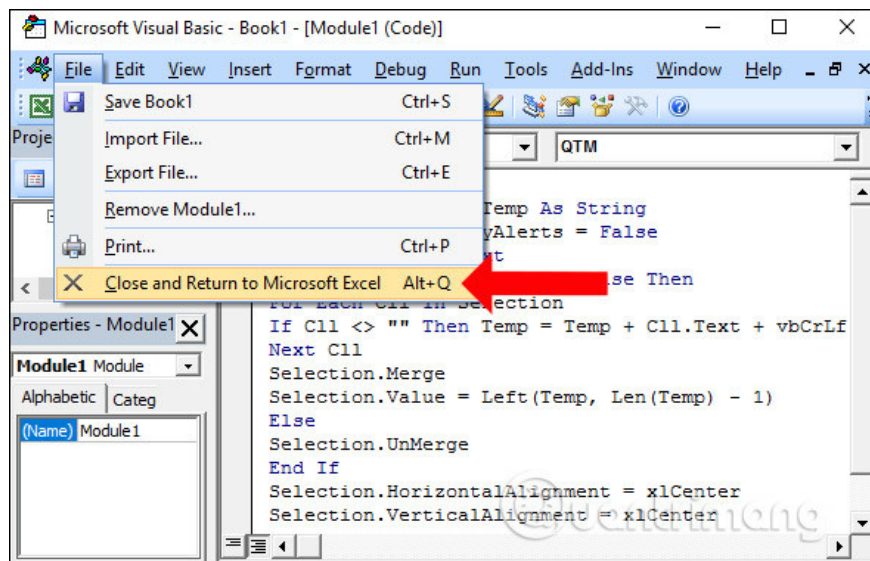

```

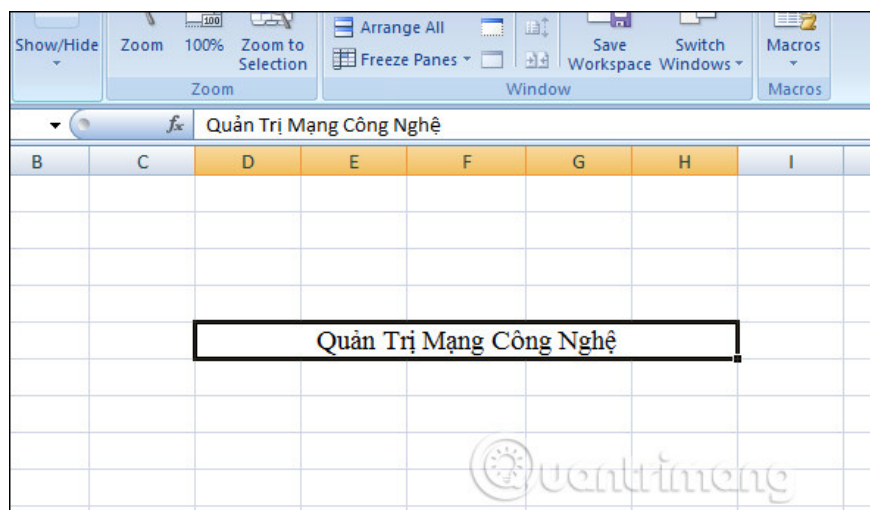

#### Step 4:

When you have entered the above code, click on **the File button** and select **Close and Return to Microsoft Excel** to close this interface and return to Excel.

This code will automatically be saved to the computer, unless the user reinstalls Win. The next use just press Alt + F8 and press Run to run the command.

The results in the cells were combined into one box and no loss of data was shown.

So we already know how to include multiple cells in Excel, in case the content or contents in different cells are not entered. The content after merging cells will not disappear but will remain the same as before.
