

How to compress video size without installing software

Reducing video size with online tools is very simple, as users do not need to install software to reduce video size and can use it immediately.

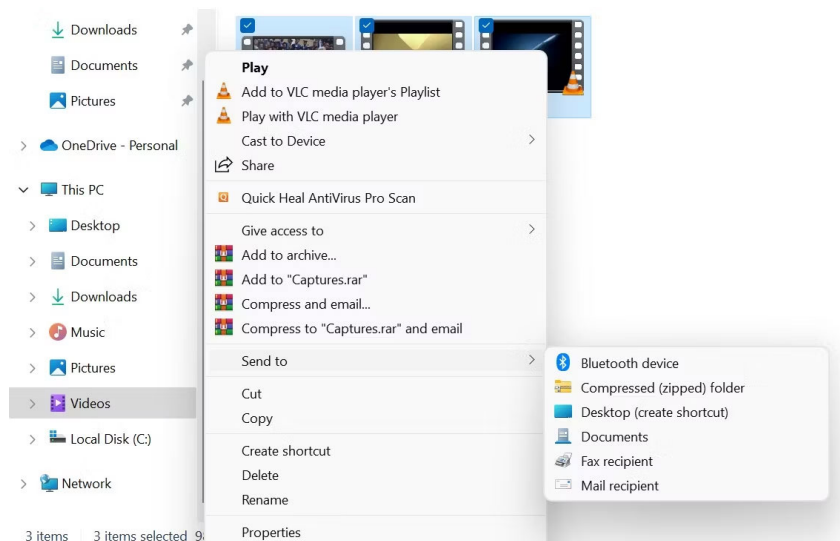

Reducing video size with online tools is very simple, as users do not need to install it and can use it immediately. When the video is compressed, it is easy for us to send the video via email or share it via online file sharing services. Most online video file compression tools are free, do not require account registration, and do not have any limitations on upload video formats, so you can do it freely. The article below will introduce you to some quality online video size reduction tools.

Compress videos using tools available on Windows

1. Compress the video by converting it into a zip file

Storing as a ZIP file helps you compress and combine your files on Windows. You can create an archive file (such as a ZIP or 7Zip file) for your video, which can reduce the video size on Windows.

1. To compress multiple videos, put them all in a single folder on your PC.
2. Open that folder, select all the videos you want to compress, right-click on any video and select **Send to > Compressed (zipped) folder** .

3. Windows will create a new archive and save it in the same folder as your video.

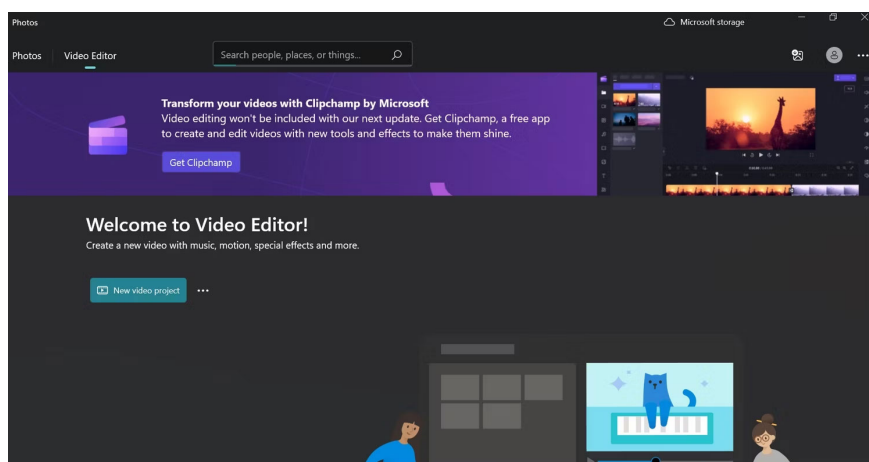

This method works on most standard file types.

Note : Compressing video files into ZIP archives usually does not significantly reduce file size. Many video files are highly compressed using codecs like H.264 or HEVC, and turning them into zip files provides only minimal additional compression.

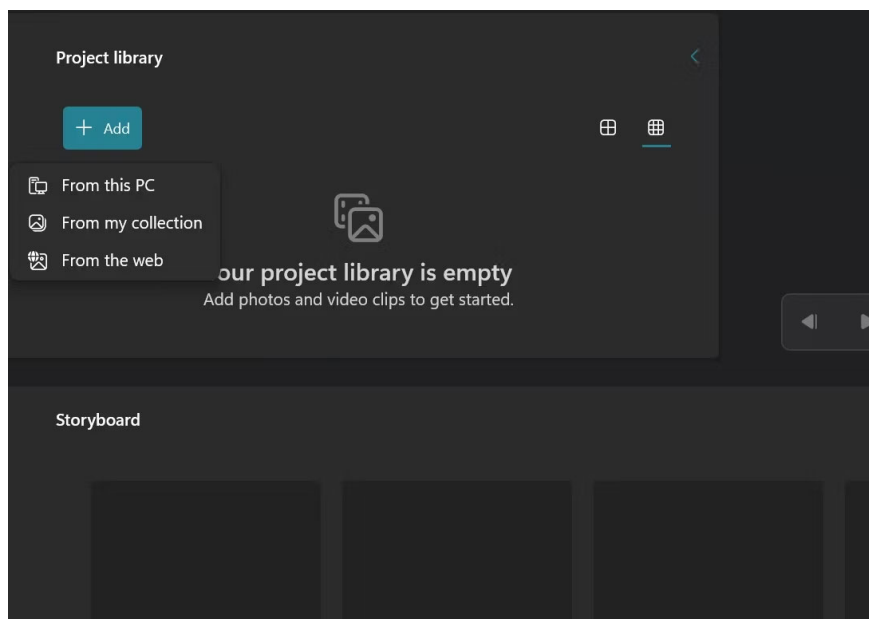

2. Compress videos using the built-in Video Editor application

Windows has a built-in video editor that you can use to reduce video size on Windows 11. There are many options for how to compress videos in this application.

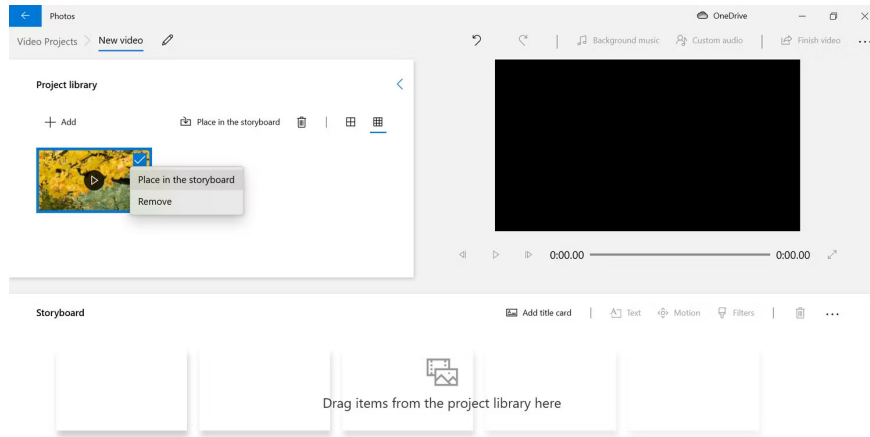

1. Search for **Video Editor** using the Start menu and select the most suitable result.
2. Click **New video project** , then enter (or omit) a name for the video you're about to compress.

3. Click + **Add** and add the video you want to compress from your PC, gallery or web.

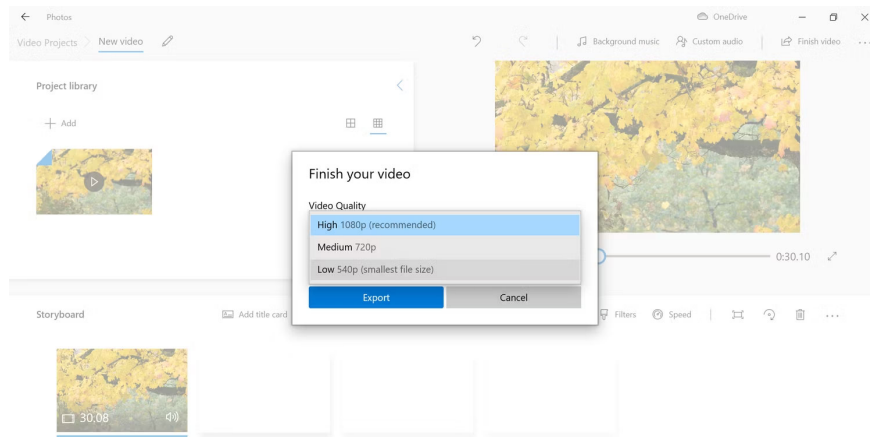

4. Right click on your video and select **Place in the storyboard** .

5. Click **Finish video** in the top right corner.

6. Select an option from the **Video Quality** drop-down menu to compress your video. This will affect the quality of the video; The lower the resolution you choose, the smaller the resulting video file size will be. Then, click **Export** .

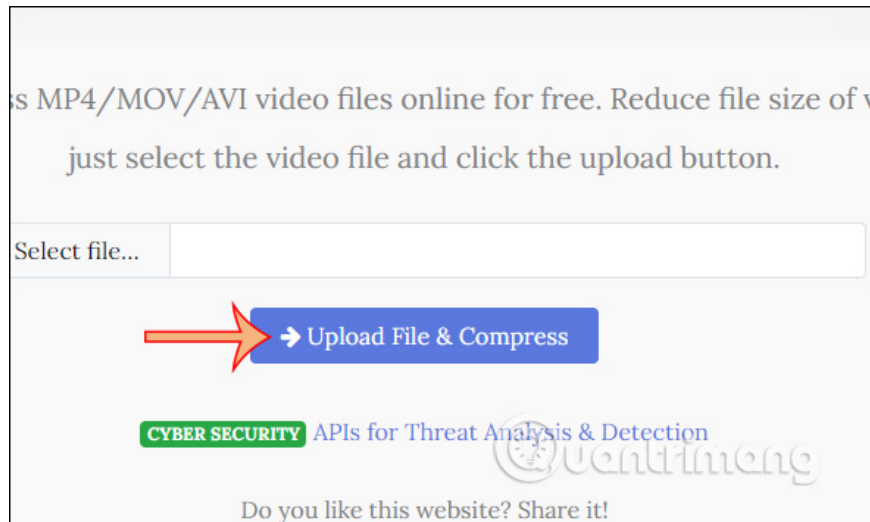

Please note that choosing a small resolution size may reduce video quality. If you want to know how to reduce the quality of a video, this is a great way to do it. You may have to play around with video compression settings to find the sweet spot between quality and file size.

Compress videos using online tools

1. Compress video size on Youcompress

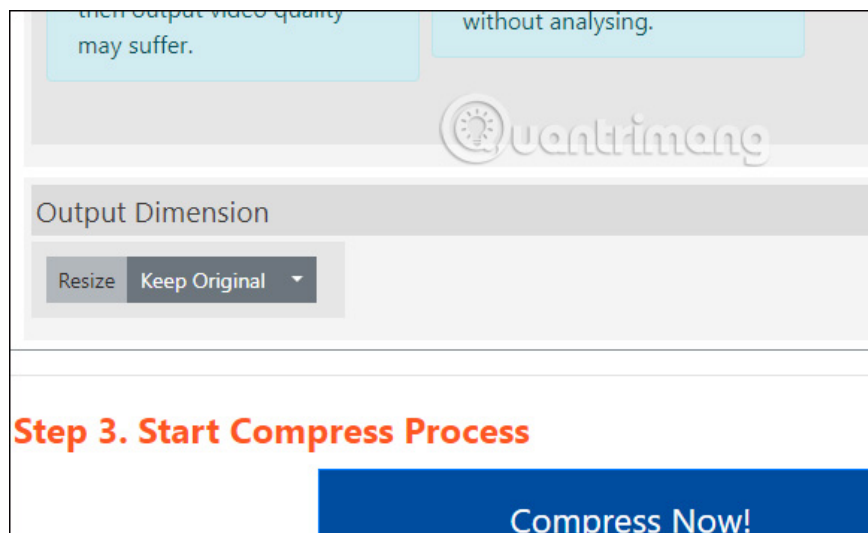

The website supports downloading videos in MP4/MOV/AVI format. Click **Select files** to upload the video and then select **Upload File & Compress** to reduce the video size.
