

# How to Connect a Razer Controller to a PC

You can connect controllers to your gaming computers to enhance your gaming experiences. This wikiHow will teach you how to connect a Razer controller to your Windows 7 or higher PC by Bluetooth or using a wired connection. Flip the switch...

## Connecting Wirelessly

1. **Flip the switch located on the back of the controller to PC Bluetooth mode (if available).** The switch has a blue background (on the Razer Raiju Ultimate) and is located in the center of the back of the controller.
  1. Depending on the model of the Razer controller you have, the switch might be located somewhere else. You'll need to refer to the Razer's instruction manual for more details. Your Razer controller might not have a Bluetooth function and may only be able to connect with a USB cable.
  2. If this is your first time using the Razer controller or its charge is low, you'll most likely want to make a wired connection. If the lights on your controller are red, the charge is low.
2. **Tap the  button to turn the controller on.** The controller should light up to show you that it's turned on.
3. **Press and hold the  and  buttons for at least 5 seconds.** When the status light changes from slow to rapid blinking, your controller is in pairing mode and you can release the buttons you're holding down.
4. **Go to Settings on your computer.** You'll find the gear icon for Settings in the Start Menu (you can either click the Start Menu icon in your taskbar or you can press `?Win`).
5. **Click .** You'll see this as the first option in the second column.
6. **Click .** You'll see this on the right side of the window; it's the first clickable option. You'll see discoverable devices appear in the list as your computer scans.
7. **Click the Razer controller to pair it.** If you don't see it in the list, you might need to turn off the Razer controller and put it into pairing mode again.
8. **Click .** A confirmation window will display that you've successfully connected to the Razer controller.<sup>[1]</sup>
9. **Install the appropriate drivers.** You should be automatically prompted to install drivers to use the Razer controller. If you aren't prompted, you can manually get the drivers from the Razer support site.

## Connecting via USB Cable

1. **Flip the switch located on the back of the controller to USB (if available).** The switch has a blue background (on the Razer Raiju Ultimate) and is located in the center of the back of the controller.
  1. Depending on the model of the Razer controller you have, the switch might be located somewhere else. You'll need to refer to the Razer's instruction manual for more details.

2. If this is your first time using the Razer controller, you'll most likely want to make a wired connection.
2. **Plug the micro-USB connector into your controller.** Your Razer came with a cord, but if you lost it, you can easily find USB cables with a micro-USB connector at any retail and electronics store.
  1. You'll see the micro-USB port on your controller centered at the top.
3. **Connect the other end of the USB cable to your computer.** You'll find the rectangular USB ports on the front face of the tower, along the sides of your laptop, or on the back of an all-in-one.
4. **Download the appropriate drivers.** Device Manager should prompt you to download the drivers you'll need to use the Razer controller, but if you aren't automatically prompted, you can go to the Razer support site and download the right drivers.<sup>[2]</sup>
