

How to connect a tablet to a projector

Connecting the tablet to the projector brings many conveniences to study and work. See the instructions on how to connect the tablet to the projector in the most detailed below!

Currently, there are many use of electronic devices such as phones, tablets, laptops, . And the need to present with those devices to serve work as well as study. Today, I would like to show you how to connect a tablet to a projector in the most detail.

1. Is it possible to connect a tablet to the projector?

Currently, there are many people who still use tablets as a replacement for laptops because it is very compact and can perform the same operations as on a laptop. Some tablets can connect to projectors for study, work or entertainment just as much as when using a laptop or computer. The way to connect is also extremely simple that anyone can do.

2. Benefits of connecting a tablet to a projector

Using a tablet to connect to a projector has many benefits such as:

- + Saves you money when you don't need to buy expensive equipment.
- + No need to bring large, bulky devices, just a tablet is enough.
- + You can start a slideshow at any time with the cable.

3. How to connect the tablet to the projector with a cable

- For Ipad

The best device that connects the iPad to the projector is the Sneakpeek II. Sneakpeek II is a set of cables that convert the signal from your iPad to the projector screen. The use is also extremely simple, you just need to plug the two ends of the cable into the screen to be able to start the presentation.

- For Samsung Galaxy tab

For the Samsung Galaxy tab tablet line, the manufacturer has launched a device called Galaxy Tab HDTV Adapter. This accessory converts the tablet's signature port to HDMI, and then you need to connect it to the projector.

- For Asus brand tablets

You only need 1 mini HDMI to VGA converter cable to be able to present simply.

4. How to connect your tablet to a projector wirelessly

As for how to connect the tablet to the projector wirelessly is a bit more complicated.

- Use WiFi dongle USB

The computer will have an early USB port that is compatible with a number of devices including the WiFi dongle USB. The device is only suitable for presenting Microsoft Word , Excel , PowerPoint , web browser, limited Video transmission.

First you need to download the manufacturer's proprietary software to the tablet. Next, plug the WiFi dongle into the USB port on the projector, connect the WiFi between the tablet and the WiFi dongle by selecting the WiFi network from the list of WiFi networks on the tablet that matches the WiFi dongle on the projector.

Once done, just turn on the software and start the slideshow.

Using Wireless HDMI (WDMI)

The projector will have a USB port or connect via an external 5V - 1A source, the signal head will be connected to the projector's HDMI port by a Wireless HDMI device (WDMI). Wireless HDMI has the advantage of extremely fast transmission speed so you can present Full HD Video or high resolution images.

Wireless HDMI connections are exactly the same as a USB dongle WiFi device. You also need to download proprietary software and plug the device into the projector, But when choosing a WiFi network to connect to, WDMI will ask for a password when the projector is connected to the WDMI kit.

5. Some notes when connecting the tablet to the projector

After connecting, place the projector in a cool place, away from the wall so that the large amount of heat generated does not affect the projector.

After using the projector, you should turn off the projector to give it time to rest. The projector should be used for a reasonable time to ensure the best lamp operation time.
