

# How to control a remote computer by phone with AnyDesk Remote

AnyDesk is a remote control software with fast speed and multi-platform support (Windows, iOS, Android). If you are using AnyDesk for the first time to control your computer, please read the instructions below!

AnyDesk is a remote control software with fast speed and multi-platform support (Windows, iOS, Android). If you are using AnyDesk for the first time to control your computer, please read the instructions below!

## 1. Install AnyDesk on phone and computer

To control a remote computer with AnyDesk, follow these instructions:

**Step 1:** First, your computer must install AnyDesk software. If not already downloaded and installed, please download AnyDesk at <https://anydesk.com/en/downloads>

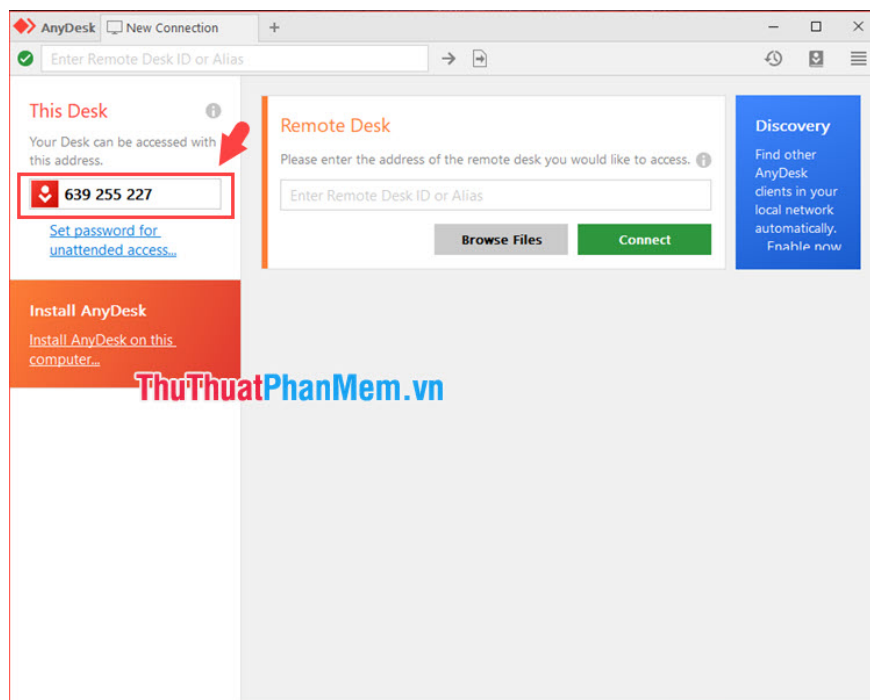

Next, you need to install AnyDesk for iOS, Android by following the link:

**iOS:** <https://apps.apple.com/en/app/anydesk/id1176131273?l=en>

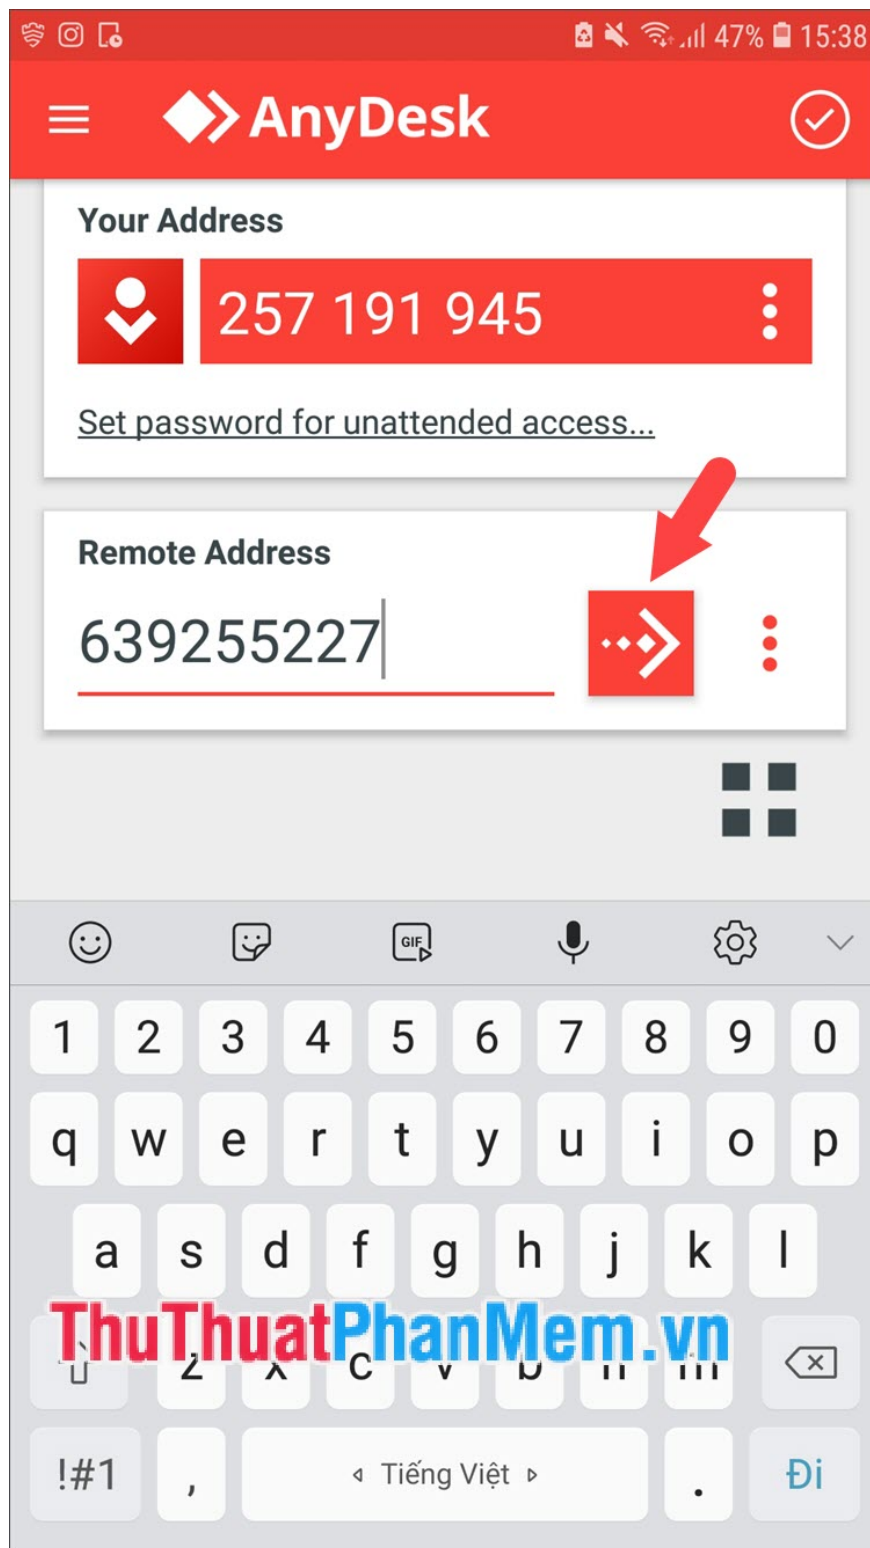

**Android :** <https://play.google.com/store/apps/details?id=com.anydesk.anydeskandroid&hl=en>

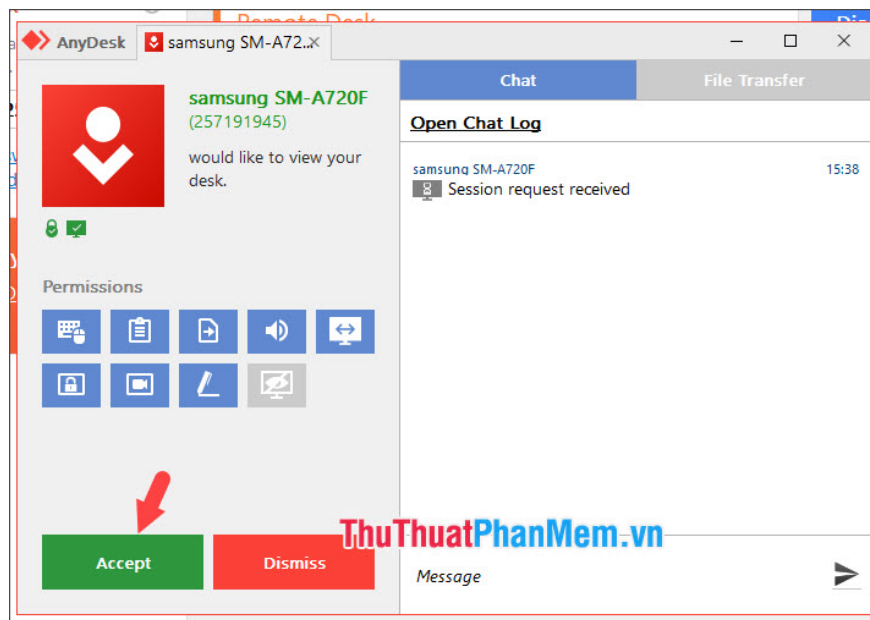

**Step 2:** Open AnyDesk on the computer and remember the software ID code in the left corner of the screen.

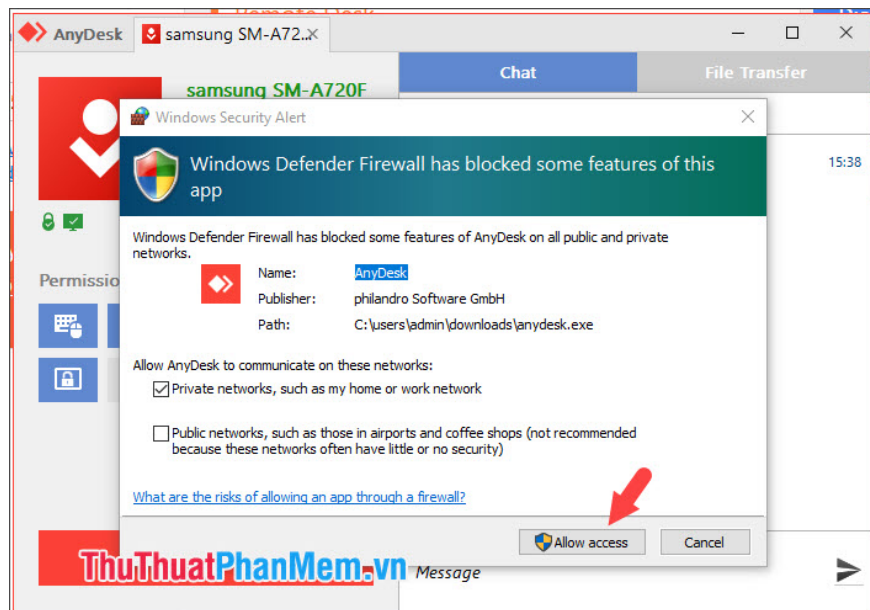

**Step 3:** Go back to the **AnyDesk** application on the phone and enter the ID code on the computer in the Remote Address field and press the red arrow button to confirm.

**Step 4:** Go back to the **AnyDesk** application on your computer, click **Accept** to agree.

Next, **Windows Firewall** will ask us to grant access. You click **Allow access** to agree.

**Step 5:** After granting the application permission, we can use AnyDesk on the phone. When you touch the option icon (1) , we have the following options:

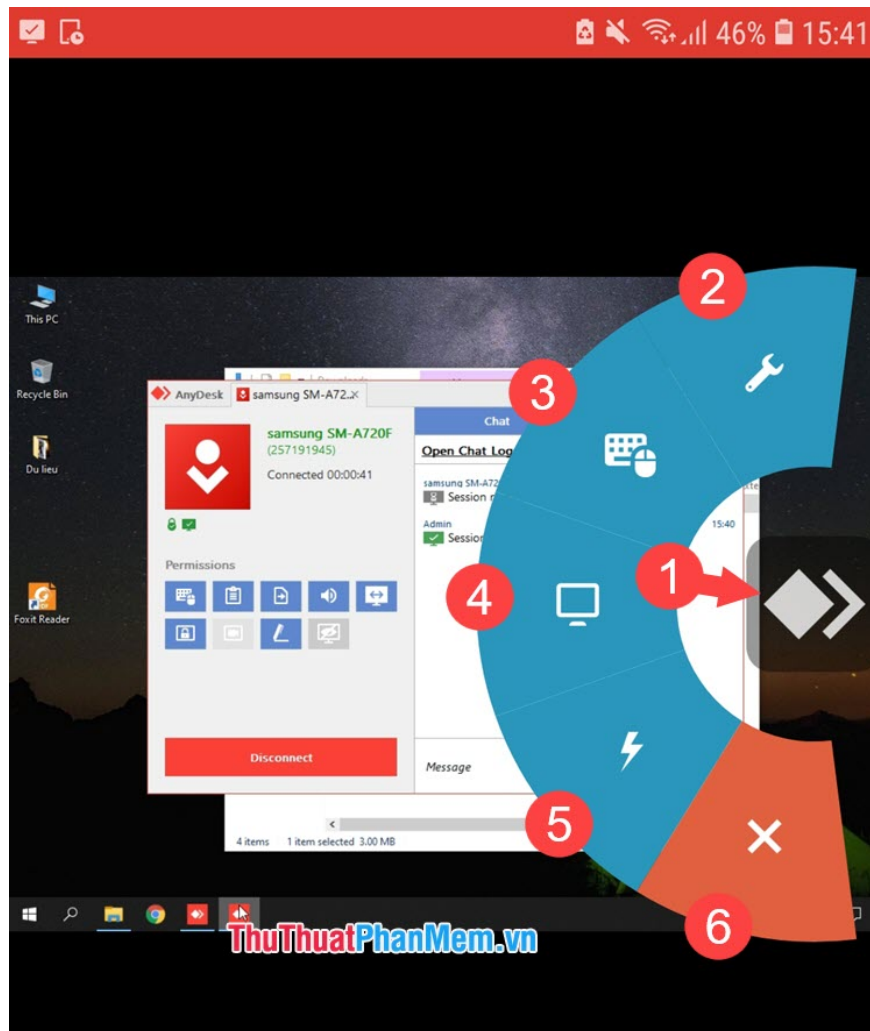

(2) Settings: Settings option allows you to fine-tune images, audio, peripherals .

(3) Display Mouse & Keyboard: This option allows you to change input operations such as keyboard and mouse.

(4) Change display mode: Display Fullscreen or just display the phone screen.

(5) Quick actions: This section contains operations such as taking a screenshot, uploading, downloading, or quickly opening **Ctrl + Alt + Del** .

(6) Disconnect: This option allows you to disconnect between two devices and stop the control.

## 2. Some useful operations when controlling a computer with AnyDesk via phone

### 2.1. Change the keyboard input type

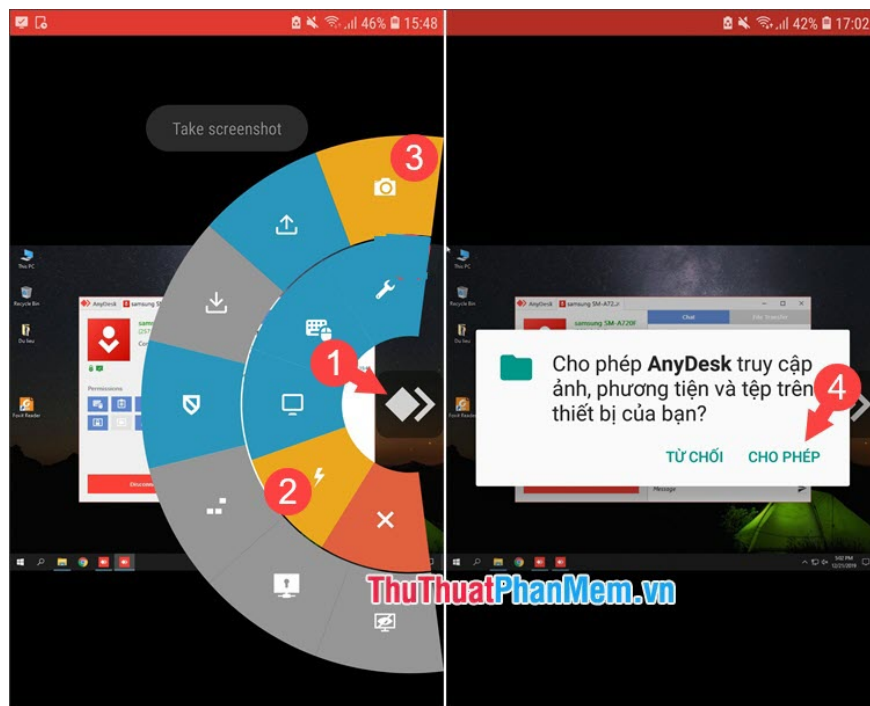

You touch the **Options** button (1) => **Keyboard & Mouse** (2) With the first option will display functional keyboards such as F1 - F12, Windows, Alt . And the second option will display the normal keyboard for you to type.

## 2.2. Take screenshots with AnyDesk

To take a screenshot, touch the **Option** button (1) => touch the quick action icon (2) => Camera icon (3) .

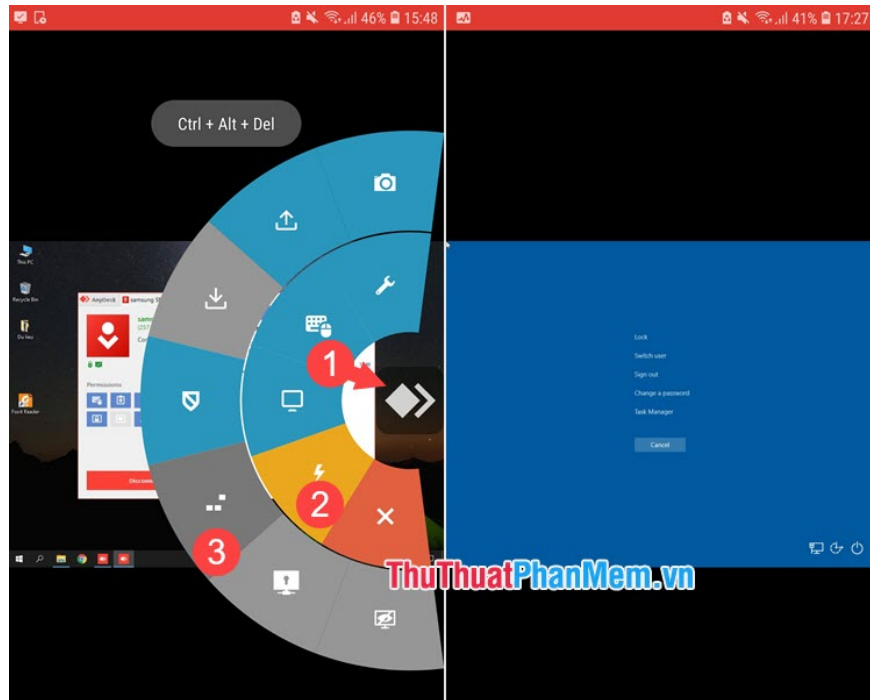

Next, the application requires you to grant access to photos, media . You click **Allow** (4) to complete.

## 2.3. Open Ctrl + Alt + Del

To use **Ctrl + Alt + Del** on AnyDesk, do the following:

You touch the Option icon (1) => Quick actions (2) => The 3-dot symbol (3) to quickly open **Ctrl + Alt + Del**.

With AnyDesk, we can easily work anytime and anywhere without having to be with the computer, all we need to do is own a smartphone, a compact tablet using Android or iOS operating system and has installed AnyDesk application.
