

How to control iPhone camera with Apple Watch

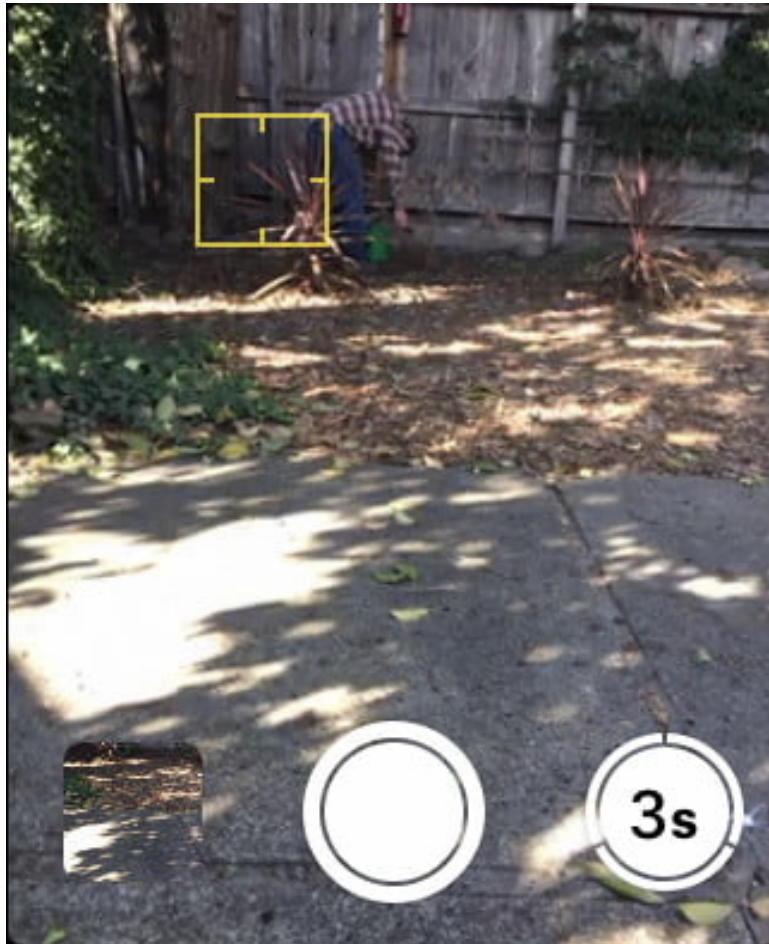

Control iPhone camera with Apple Watch remotely makes it easy for users to adjust the camera without setting up directly on the iPhone.

The camera app on Apple Watch has been upgraded and added more features, such as controlling the camera on the iPhone remotely, without having to set up directly on the device. With this feature when you take a group selfie or use a tripod, simply control the camera on your Apple Watch. The following article will guide you how to control iPhone camera on Apple Watch.

How to control iPhone camera remotely

We open **the camera app on Apple Watch** and the camera app on iPhone is also open. Next we adjust the camera angle on the Apple Watch screen, adjust the exposure mode through the yellow frame.

To **zoom in and out of the capture screen** we use the **crown** on the side of the device. If you want to **adjust the options** like lighting, **emphasize the screen** . Then we will see the selection of items as shown below.
