

How to Convert Excel to PowerPoint

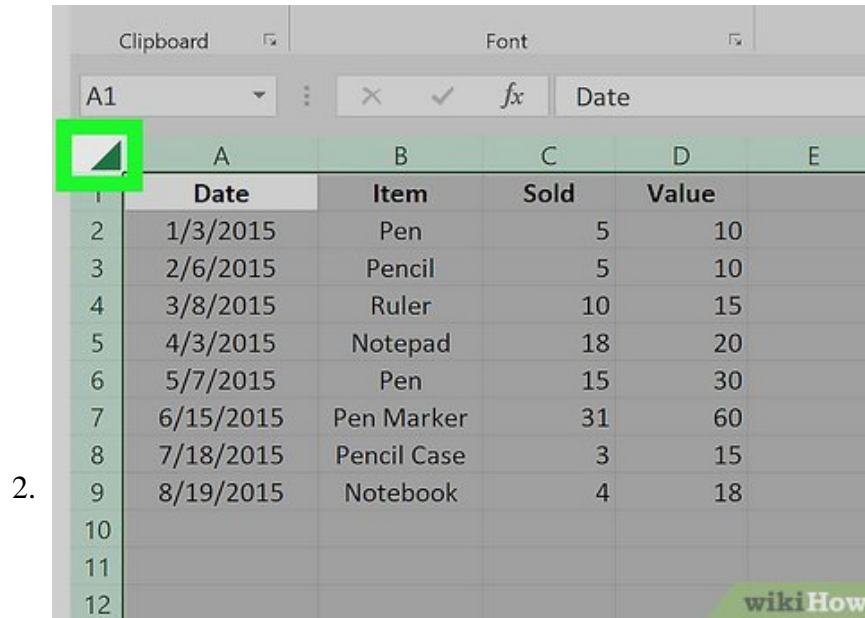

If you want to take data from an Excel spreadsheet and put it into a PowerPoint presentation, you can do so with built-in controls available in both programs. This wikiHow shows you how to put Excel data into PowerPoint slides using these...

Method 1 of 2:

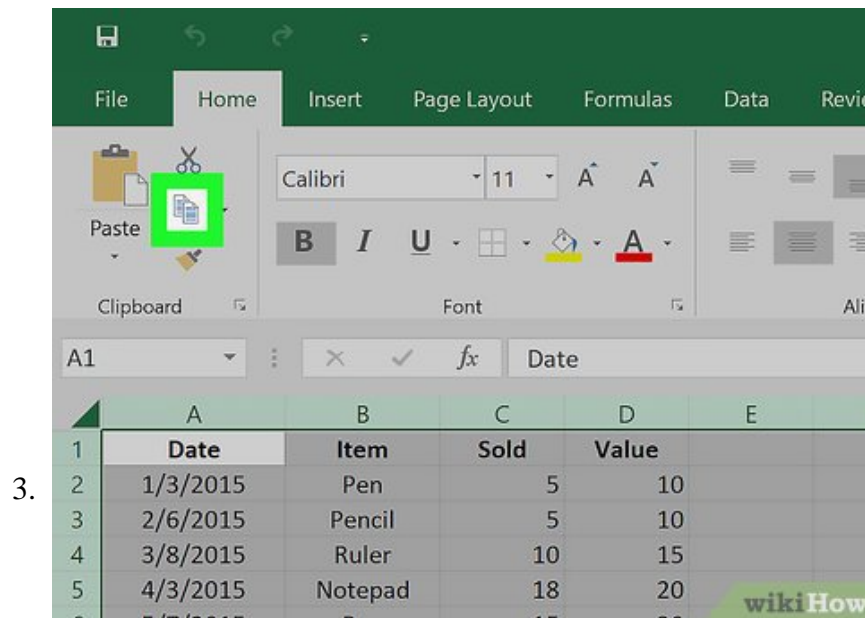

Copying and Pasting Excel Data into PowerPoint

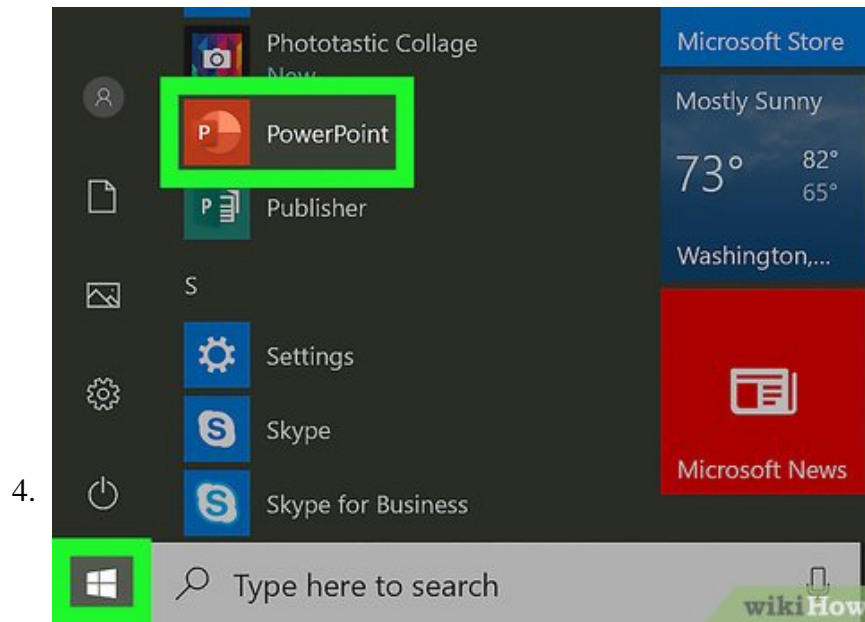

Open an Excel file you want to use. Open your file explorer and navigate to the folder where your file is stored.

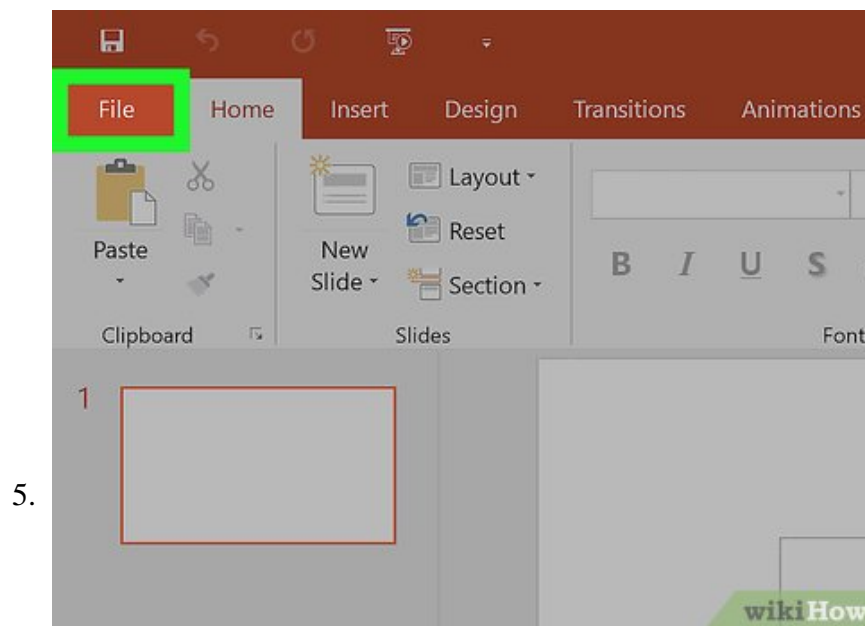

Click on the box in the top left to select data. You can select all of the data or only the data you want.

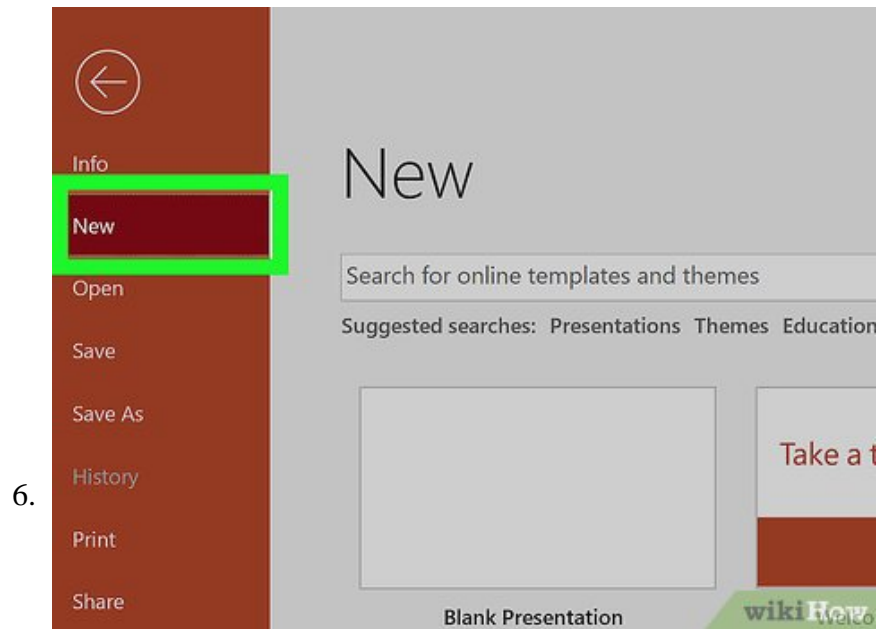

Click **Edit** and select **Copy** to copy the data.

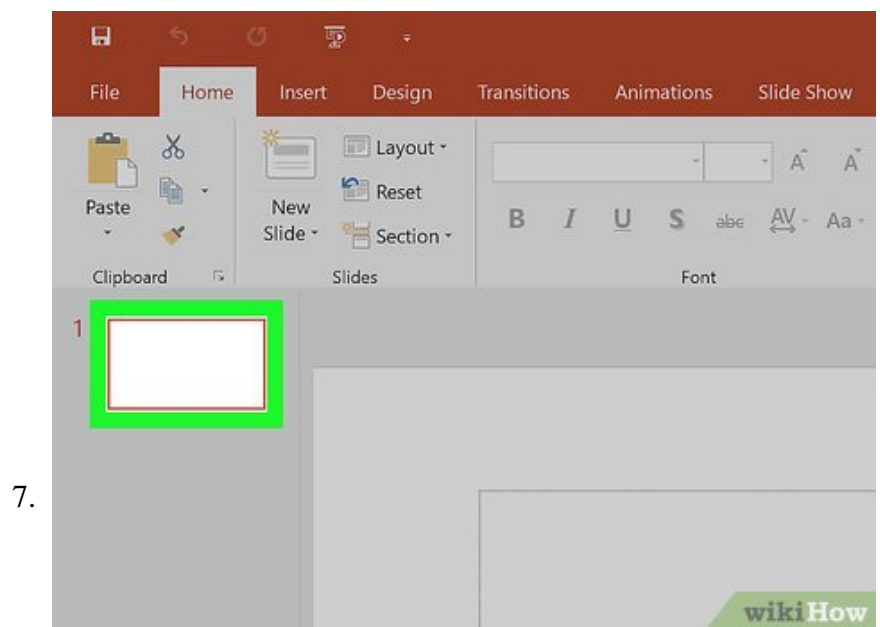

Open Microsoft PowerPoint. You can minimize the Excel file's window or exit Excel and navigate to PowerPoint.

Click **File in the top left.** This pulls up a drop-down list of more options for that PowerPoint file.

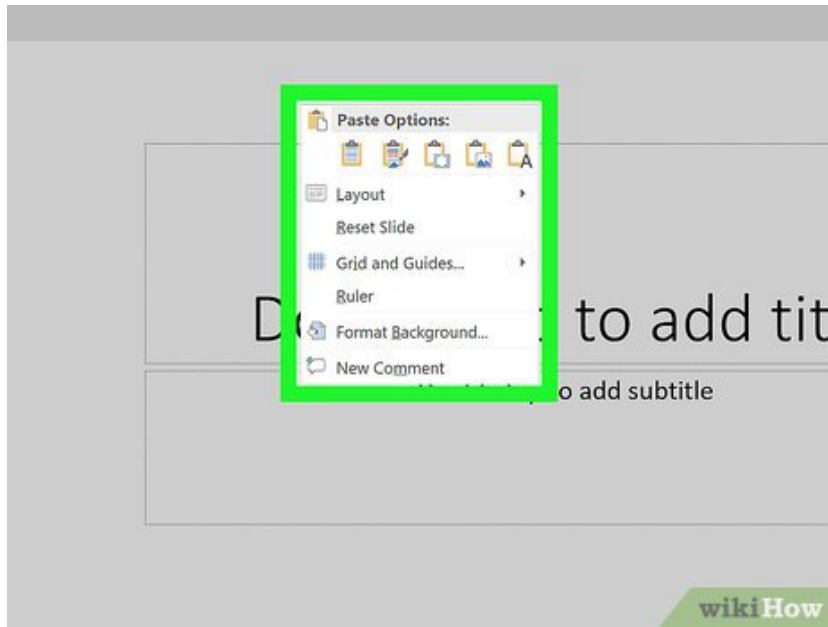

Click **New**. You can also open an existing presentation.

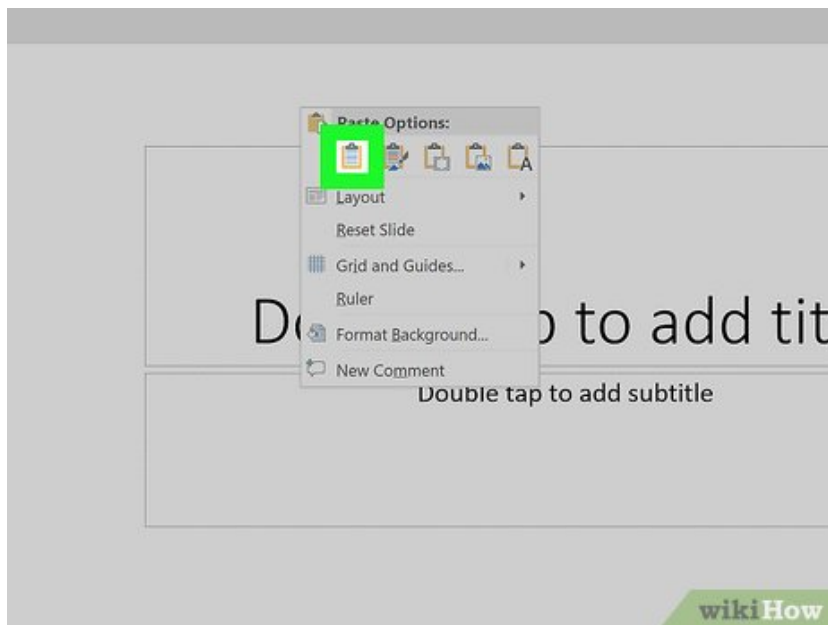

Click on the slide that you want to use. You can also format the slide for displaying data by picking the slide template.

8.

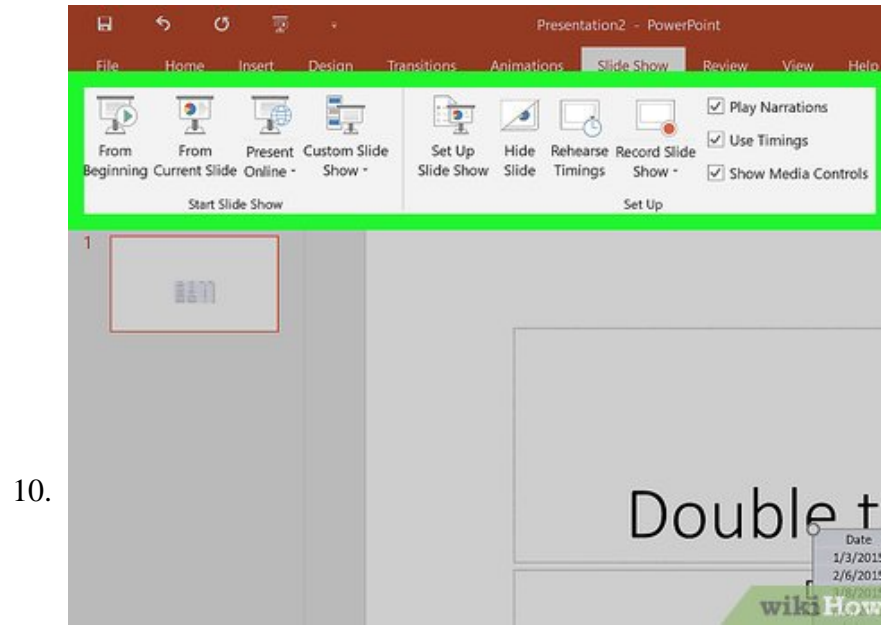

Right click and select . This pastes the Excel data into your chosen slide.

9.

Click on the clipboard icon in the bottom right. This changes presentation options for your slide.

Select a mode for presentation from the drop-down menu. Save your work after you're satisfied with the changes you've made.

Method 2 of 2:

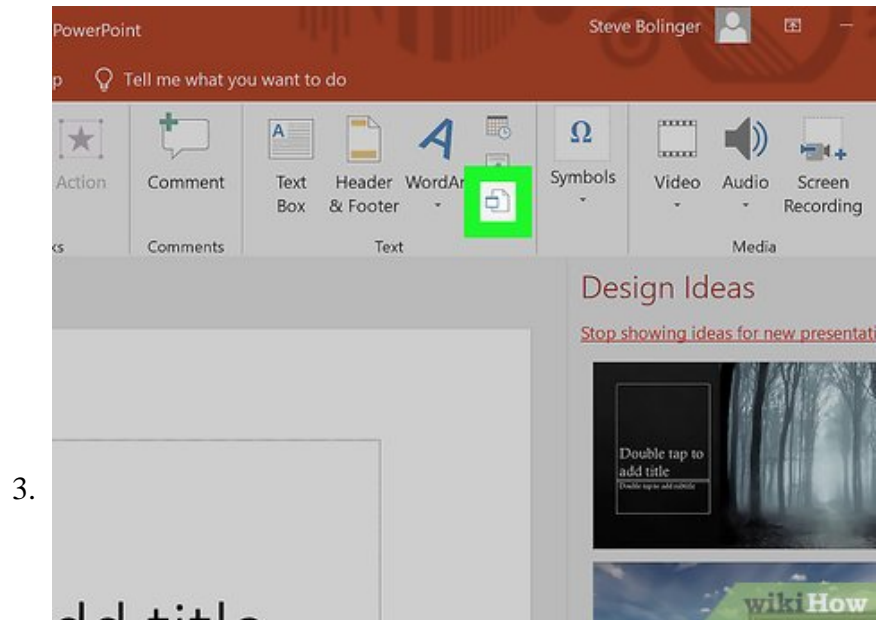

Inserting an Excel Object into PowerPoint

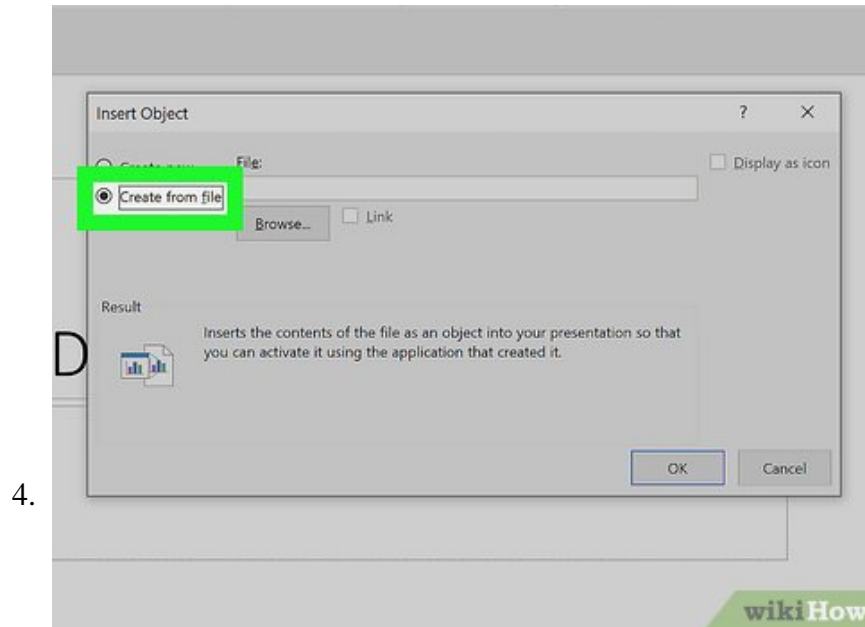

Open your PowerPoint file. Navigate to the folder where it's saved from your file explorer.

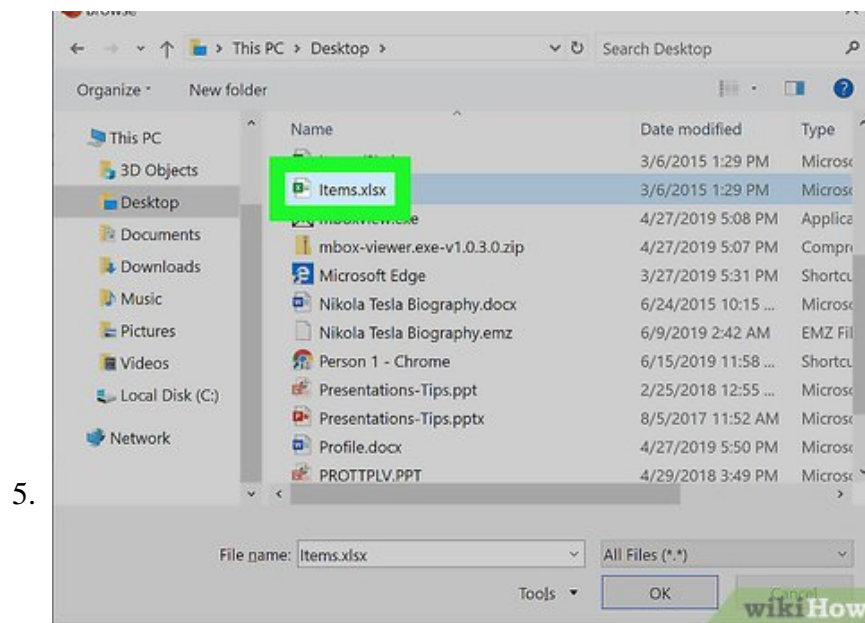

Click **Insert** in the menu bar.

Select **Object**.

Select Create from file.

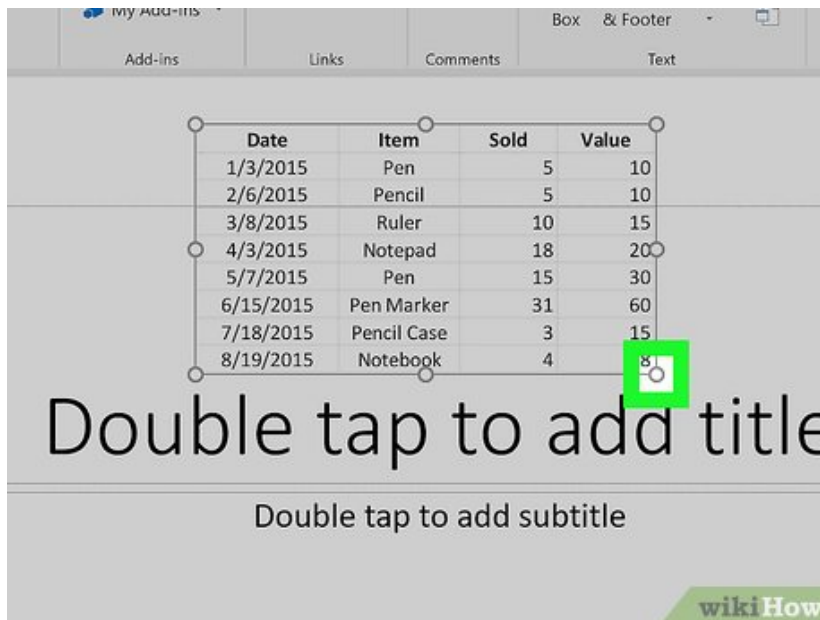

Locate your Excel file. Once you've opened the dialog window, navigate to the Excel file you want to insert into your PowerPoint slide.

6.

Select your file and click **Insert**. This will insert the file into the slide you've selected.

7.

Resize and rearrange the spreadsheet snapshot as desired. You can grab the edges to make it bigger or smaller, or click and drag to move it. When you double-click on the actual spreadsheet, it'll open the file in Excel.
