

How to 'convert' from the iOS Public Beta version to the old version

After the developer version, iOS 10 was released by Public Beta, which ordinary users can download and install. If you are trying the Public Beta version, you will experience some really exciting new features.

After the developer version, iOS 10 was released by Public Beta, which ordinary users can download and install. If you are trying the Public Beta version, you will experience some really exciting new features.

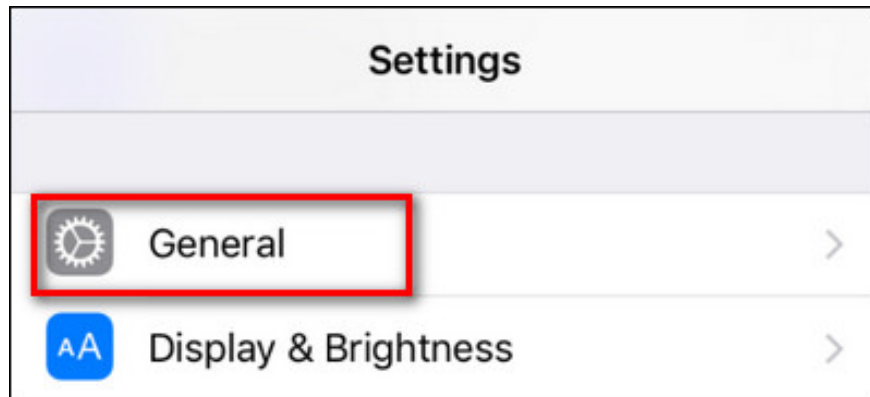

1. Why should you convert?

After the developer version, **iOS 10** was released by **Public Beta**, which ordinary users can download and install. If you are trying the Public Beta version, you will experience some really exciting new features.

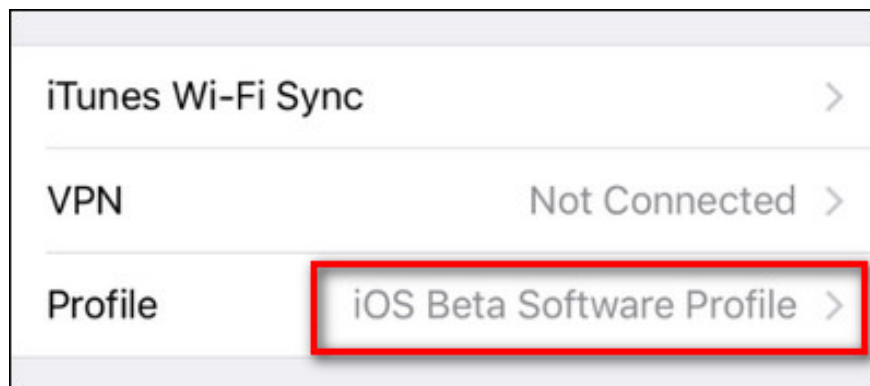

However, if you want to 'return' to use a more stable version, you can easily switch from iOS Public Beta version to the old version.

2. Disable Beta Software Profile

To do this, first open the **Settings** app, then find and click **General**.

Next on the General Settings window, scroll down to find and click ' **Profile: iOS Beta Software Profile** '.

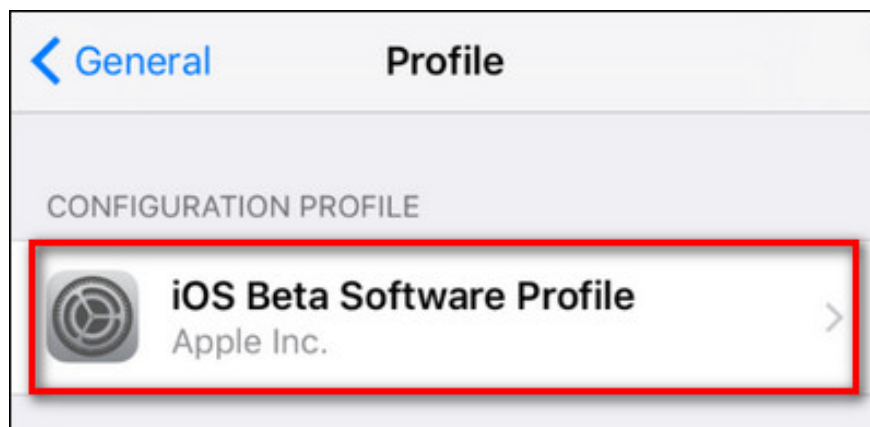

Here will be 2 notes for you. If the **Beta** version is **not yet released** , you will not see it in the Profile section.

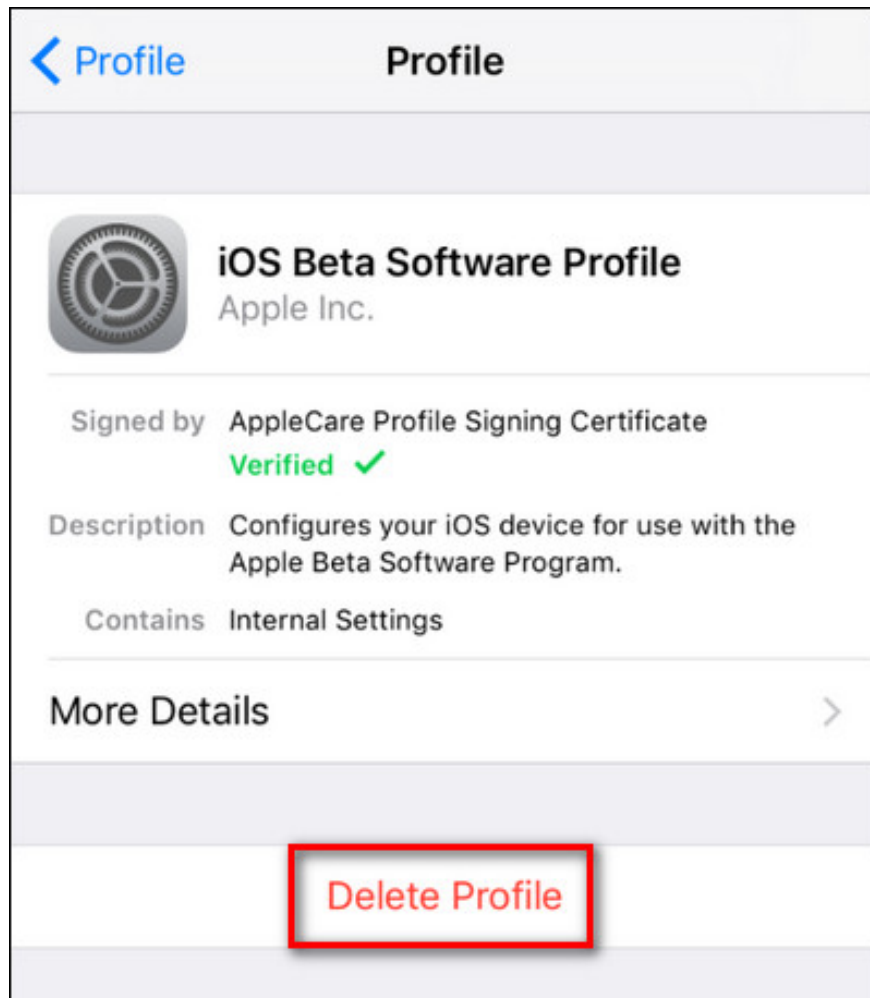

If there is another profile in the **iOS Beta Software Profile** , then you cannot continue to take steps that must contact the service provider.

Follow the same steps for **Device Management** . Only do the process if you find the exact iOS Beta Software Profile and don't delete any other items.

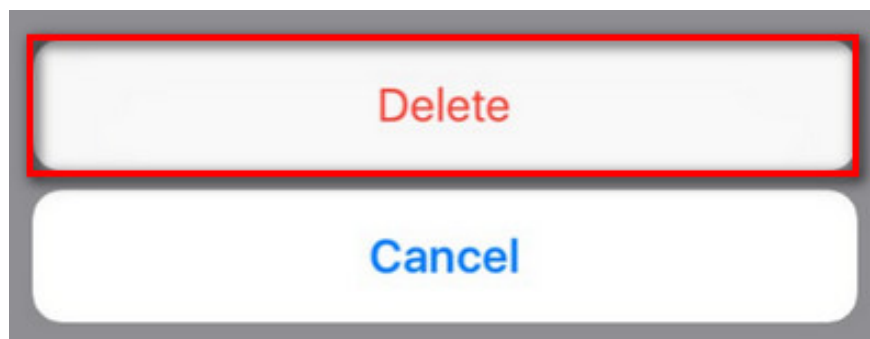

In the iOS Beta Software Profile section you will see the screen appear as shown below. Click the iOS Beta **Software Profile** again.

Next select **Delete Profile** .

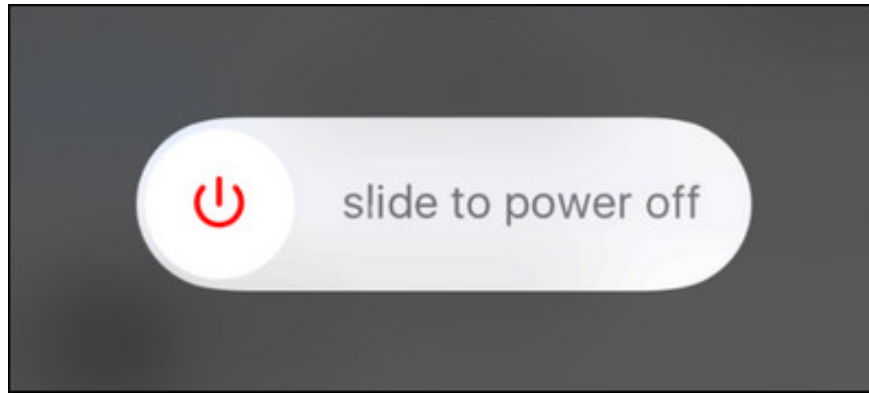

You will now be asked to enter your device's **passcode** to confirm the deletion of the profile. A confirmation dialog box appears, click Delete to confirm deletion.

After completing the process, on the Profile screen will no longer display the installed profile.

Restart your device by pressing and holding the Power button, then swipe in the direction of the arrow to turn off, re-open your iOS device by pressing the Power button.

After booting, go to **Settings** => **General** => **Software Update** to confirm that you have turned off the Beta version and returned to the old version.

In this example, the **Beta** version is **10.1** , while the **Public** version is **10.0.2** .

Good luck!
